

Title: Matrix Factorizations: Stability and Mirror Symmetry

Date: Nov 21, 2004 03:30 PM

URL: <http://pirsa.org/04110027>

Abstract:

1.  $\frac{1}{x^2} = x^{-2}$        $\frac{d}{dx} x^{-2} = -2x^{-3} = -\frac{2}{x^3}$

2.  $\frac{1}{x^3} = x^{-3}$        $\frac{d}{dx} x^{-3} = -3x^{-4} = -\frac{3}{x^4}$

3.  $\frac{1}{x^4} = x^{-4}$        $\frac{d}{dx} x^{-4} = -4x^{-5} = -\frac{4}{x^5}$

4.  $\frac{1}{x^5} = x^{-5}$        $\frac{d}{dx} x^{-5} = -5x^{-6} = -\frac{5}{x^6}$

5.  $\frac{1}{x^6} = x^{-6}$        $\frac{d}{dx} x^{-6} = -6x^{-7} = -\frac{6}{x^7}$
