

Title: Accelerated Universe and Gravity at Smallest and Largest

Date: Oct 25, 2006 02:00 PM

URL: <http://pirsa.org/06100021>

Abstract: We discuss motivations, observational constraints and consequences of modifying the fundamental laws of gravity at large distances. Such modifications of gravity can be the reason for the observed late-time acceleration of the Universe, and can be differentiated from conventional dark energy via precision cosmology. The inevitable additional polarizations of graviton lead to observably large perihelion precession of the Lunar and Martian orbits. These theories also have potentially observable consequences at LHC .

LARGE DISTANCE MODIFICATION OF GRAVITY

Gia Dvali

New York University

Modified gravity versus dark energy

Adams, McGreevy, Silverstein;

Arkani-Hamed, Dimopoulos, Dvali, Gabadadze

Universe's acceleration:

Hubble parameter: $H \equiv \left(\frac{\dot{a}}{a} \right) \rightarrow \text{const}$

Friedmann equation (flat universe)

$$H^2 + \dots = \frac{8\pi}{3} G_N \rho_{\text{Matter}} + \dots$$

Dark energy or Modified Gravity?

Universe's acceleration:

Hubble parameter: $H \equiv \left(\frac{\dot{a}}{a} \right) \rightarrow \text{const}$

Friedmann equation (flat universe)

$$H^2 + \dots = \frac{8\pi}{3} G_N \rho_{\text{Matter}} + \dots$$

Dark energy or Modified Gravity?

Discontinuity

Crossover distance $r_c \sim 10^{28}\text{cm}$

$\lim_{r_c \rightarrow \infty}$ New Gravity \neq Einstein

New gravity is no longer
mediated by a massless
spin-2 graviton!

$$h_{\mu\nu}^{\text{New}} = h_{\mu\nu}^{\text{Einstein}} + ?$$

Why: modified gravity → universes acceleration?

Universe's acceleration at a constant rate implies:

CONSTANT CURVATURE = GRAVITON "CONDENSATE"

$$R = 12 H^2 = \text{constant}$$

Because of acceleration our Universe is filled with a minuscule nearly-constant graviton condensate $\sim 10^{-29} \text{g/cm}^3$

BUT, MASSLESS BOSONS DO NOT CONDENSE
WITHOUT A SOURCE

This is why in Einstein's gravity the Universe's acceleration requires a dark energy source!

Universe's acceleration:

Hubble parameter: $H \equiv \left(\frac{\dot{a}}{a} \right) \rightarrow \text{const}$

Friedmann equation (flat universe)

$$H^2 + \dots = \frac{8\pi}{3} G_N \rho_{\text{Matter}} + \dots$$

Dark energy or Modified Gravity?

Discontinuity

Crossover distance $r_c \sim 10^{28}\text{cm}$

$\lim_{r_c \rightarrow \infty}$ New Gravity \neq Einstein

New gravity is no longer
mediated by a massless
spin-2 graviton!

$$h_{\mu\nu}^{\text{New}} = h_{\mu\nu}^{\text{Einstein}} + ?$$

Why: modified gravity → universes acceleration?

Universe's acceleration at a constant rate implies:

CONSTANT CURVATURE = GRAVITON "CONDENSATE"

$$R = 12 H^2 = \text{constant}$$

Because of acceleration our Universe is filled with a minuscule nearly-constant graviton condensate $\sim 10^{-29} \text{g/cm}^3$

BUT, MASSLESS BOSONS DO NOT CONDENSE
WITHOUT A SOURCE

This is why in Einstein's gravity the Universe's acceleration requires a dark energy source!

But, in modified gravity gravitons are no longer massless, and can condense without any dark energy source!

Resulting into the self-accelerated Universe

Friedmann equation for flat and empty universe:

$$H^2 = 0$$

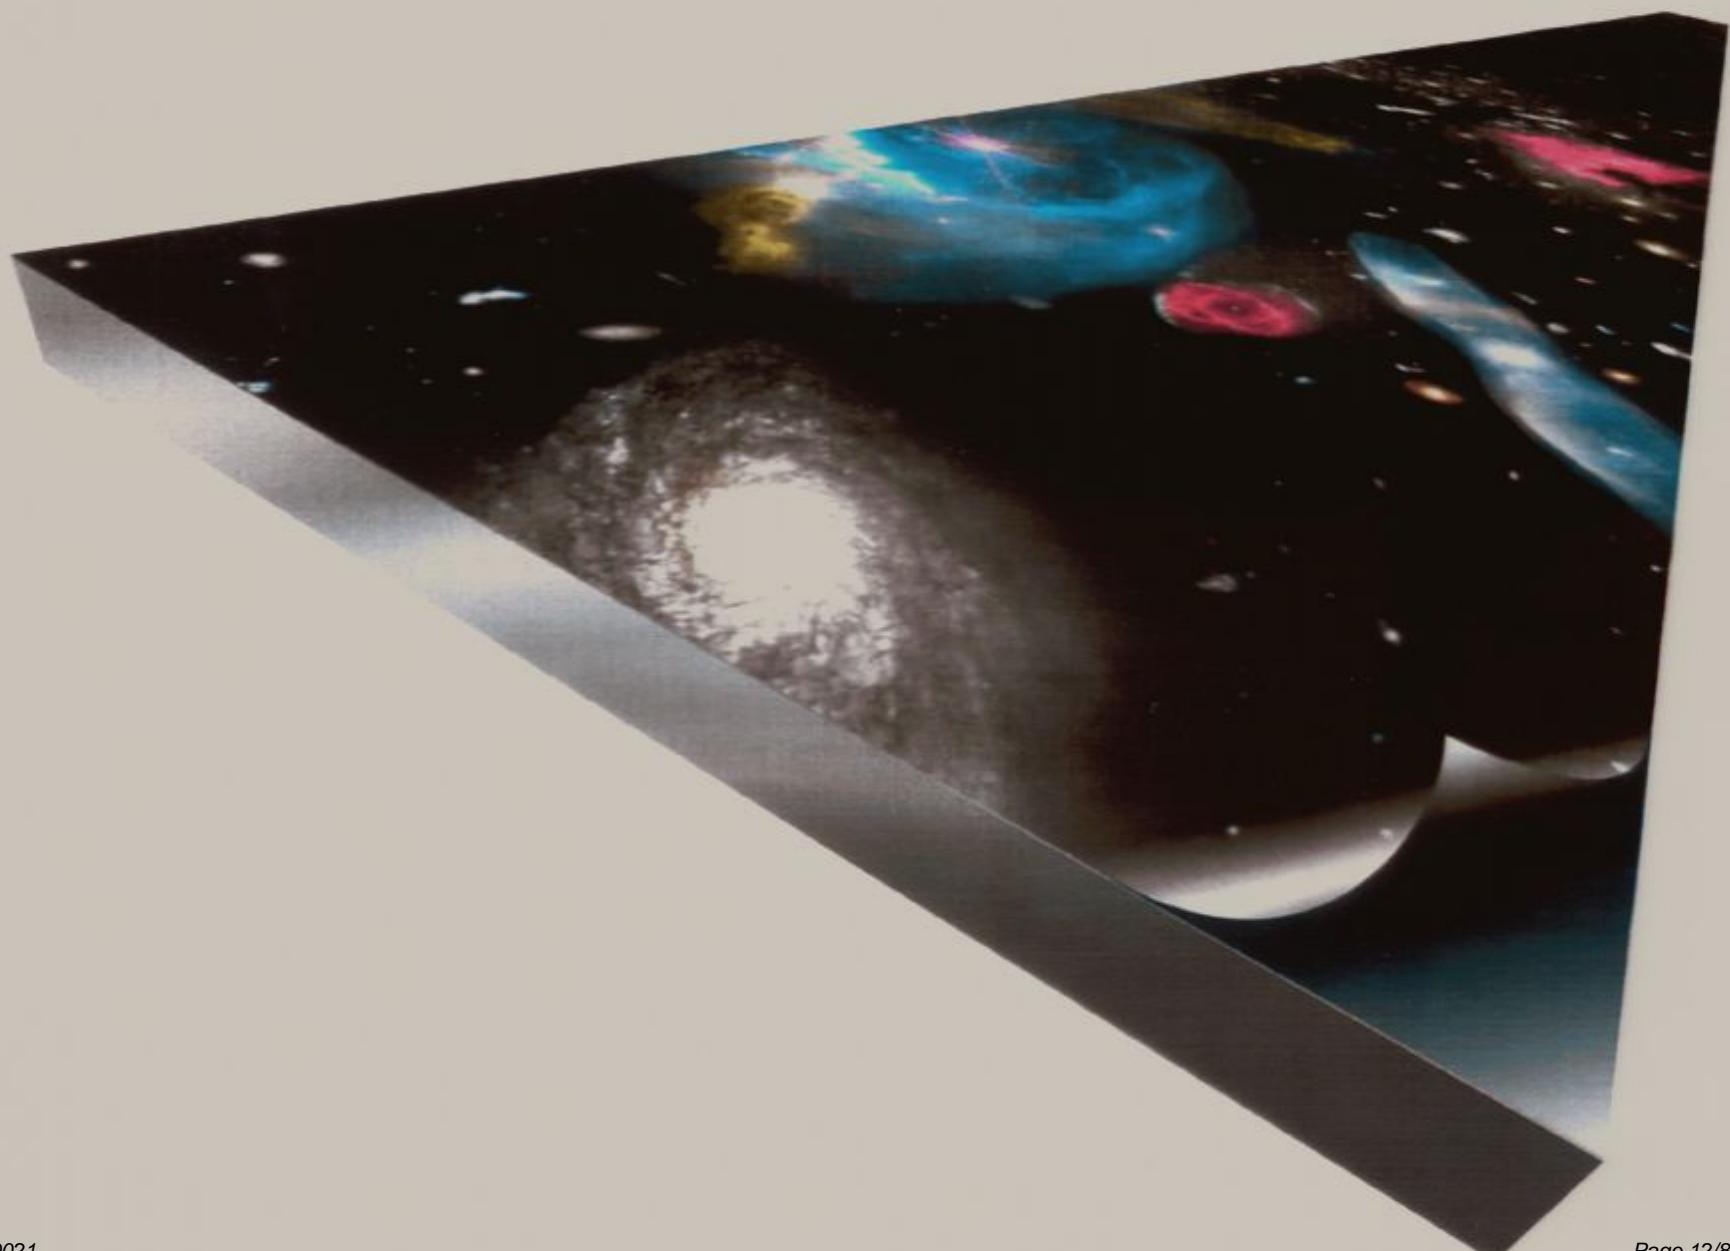

No expansion

Modified Friedmann equation for flat and empty Universe:

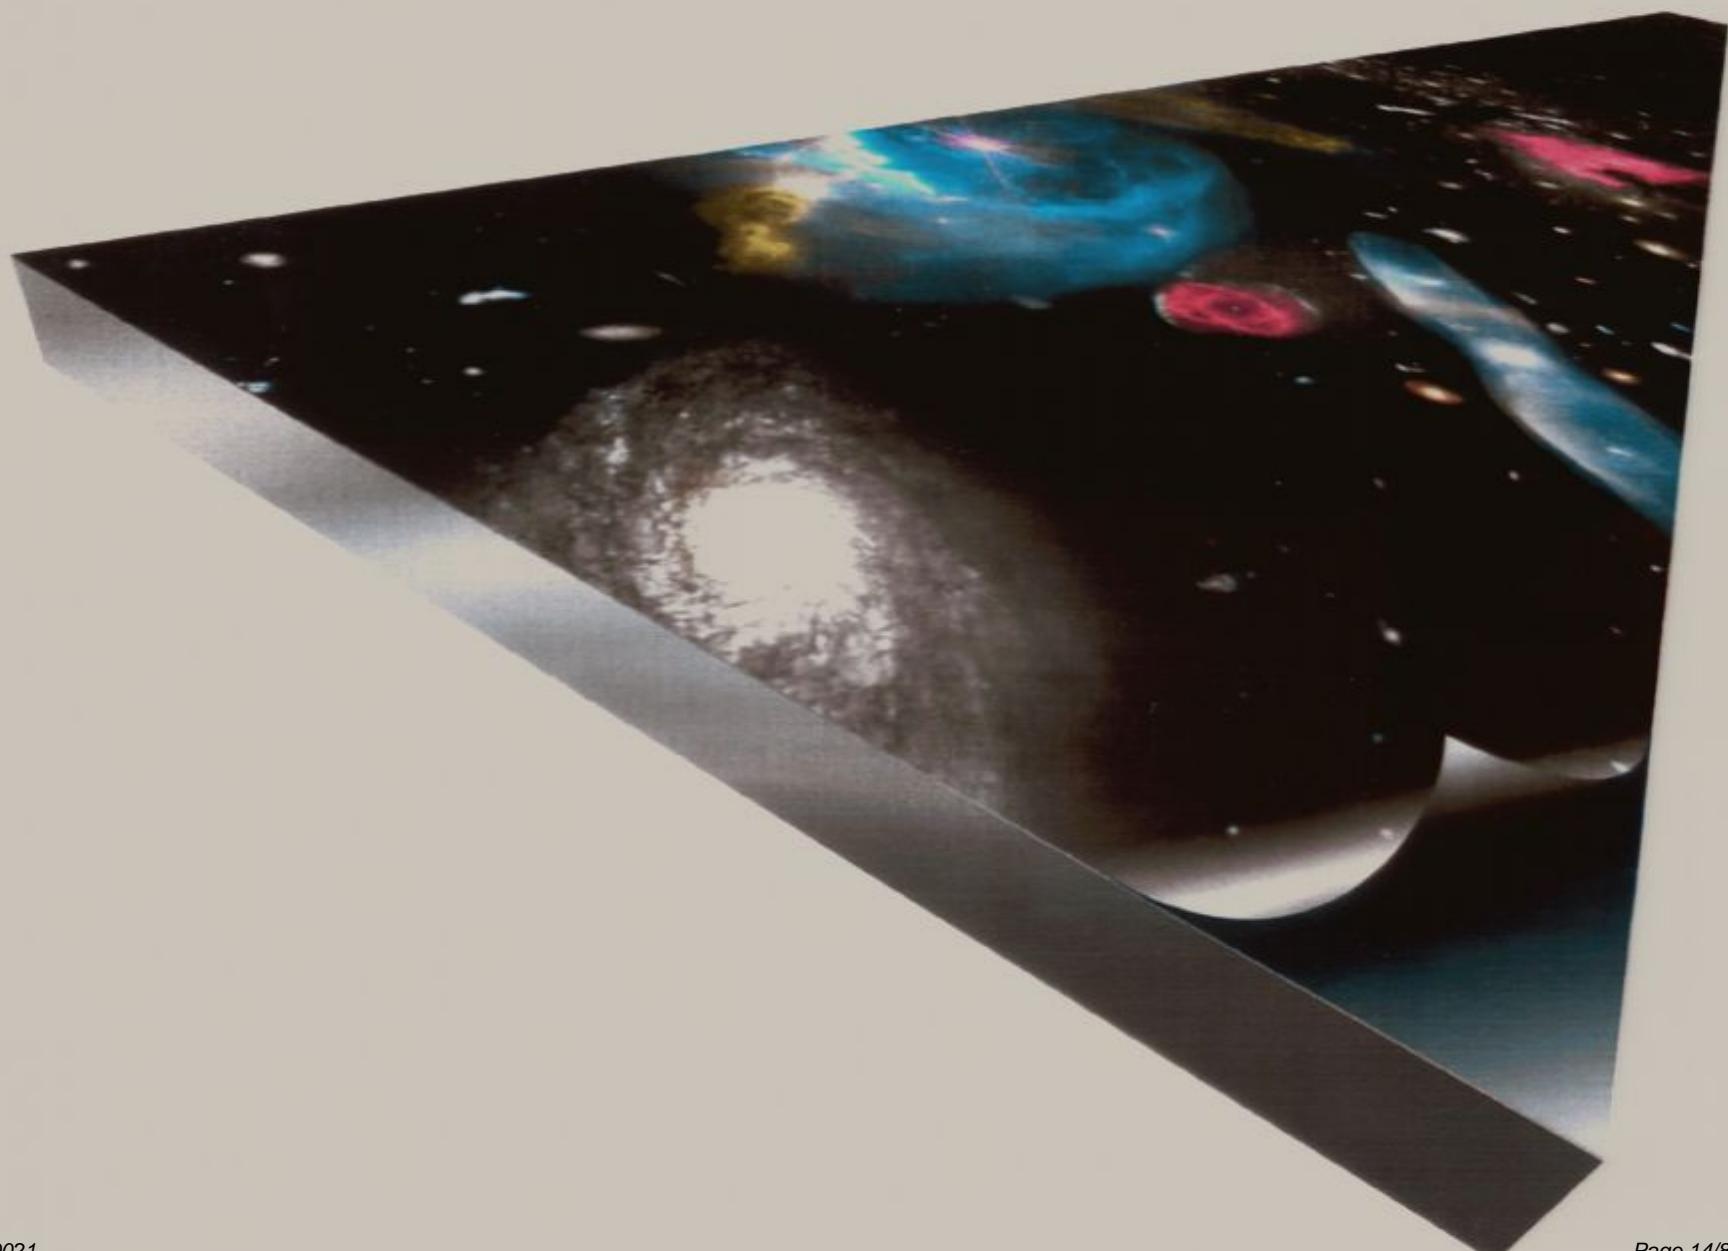

$$H^2 - H/r_c = 0$$

Acceleration at a constant rate: $H=1/r_c$

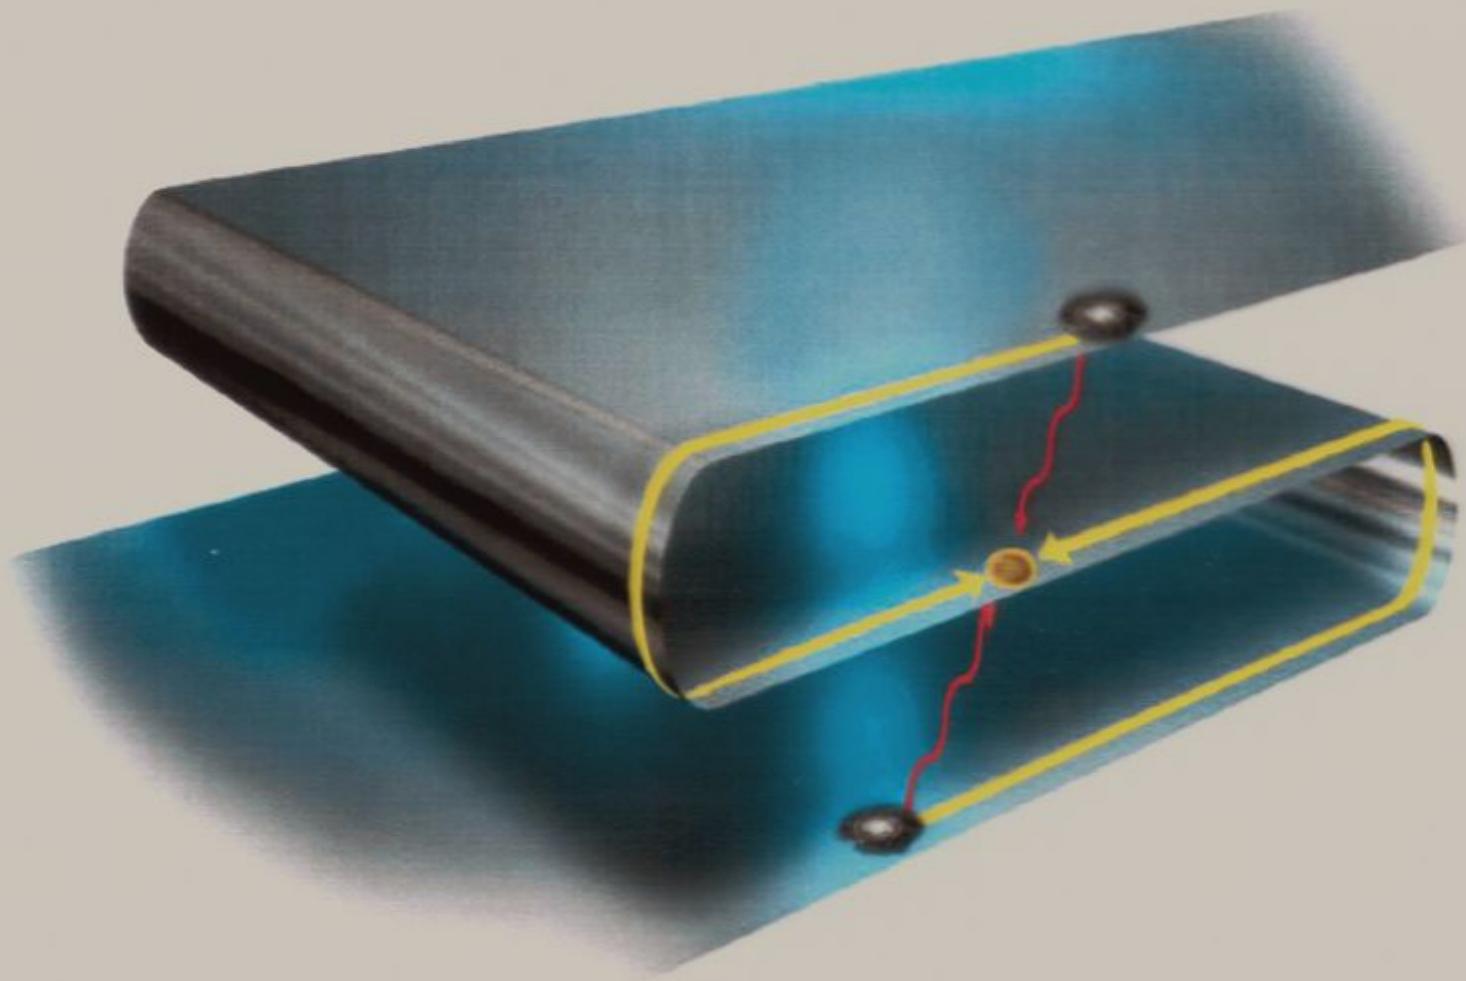

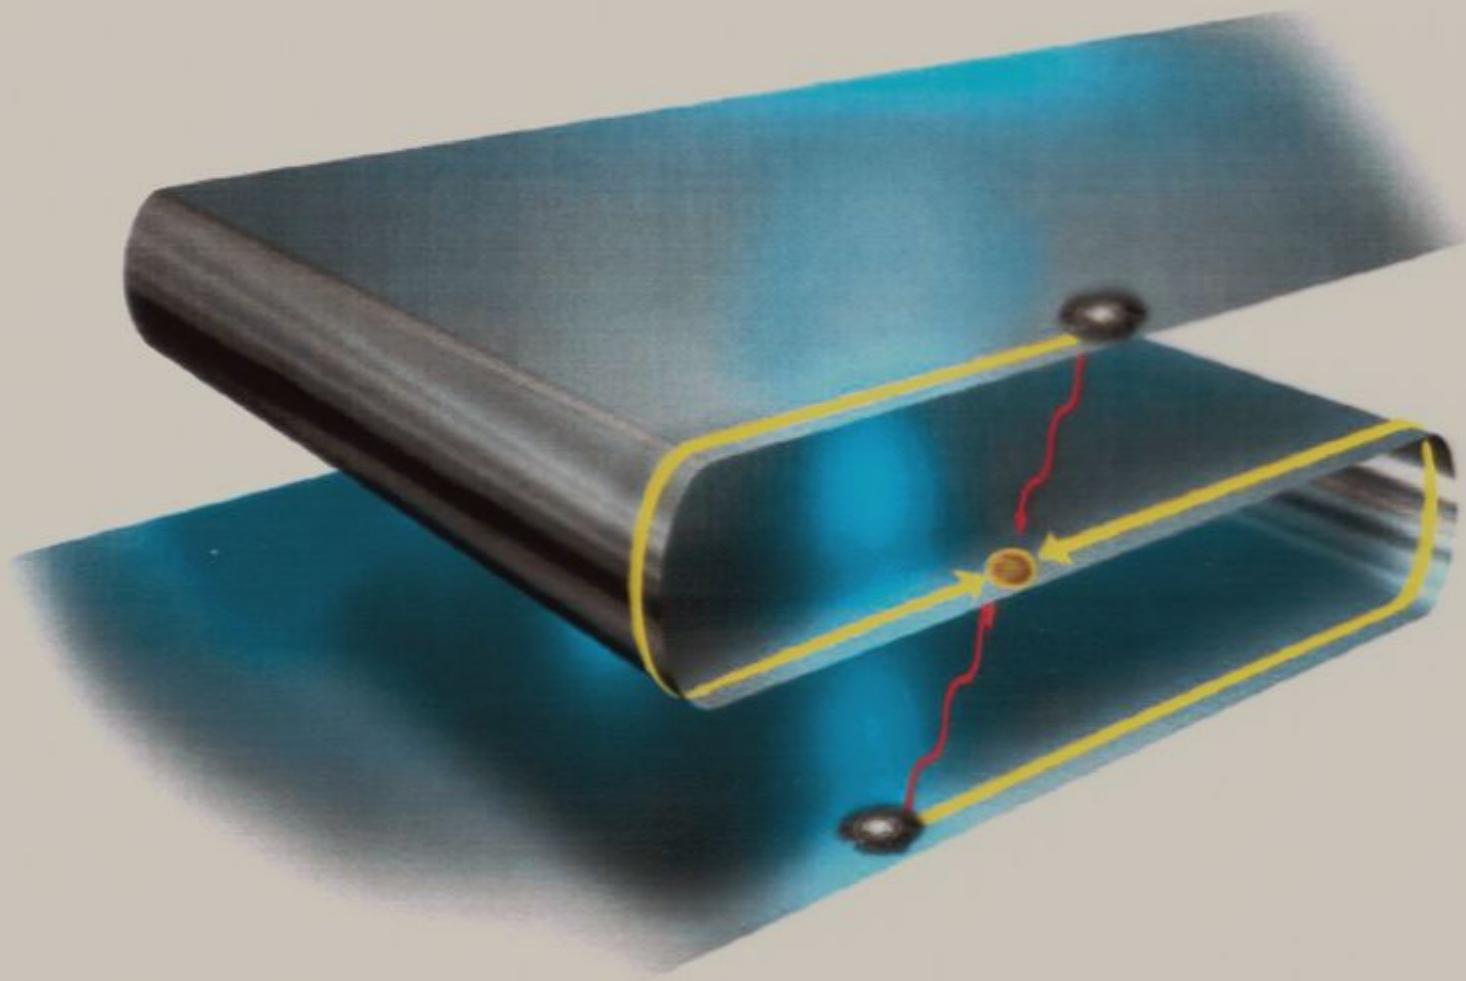

Gravitational shortcut

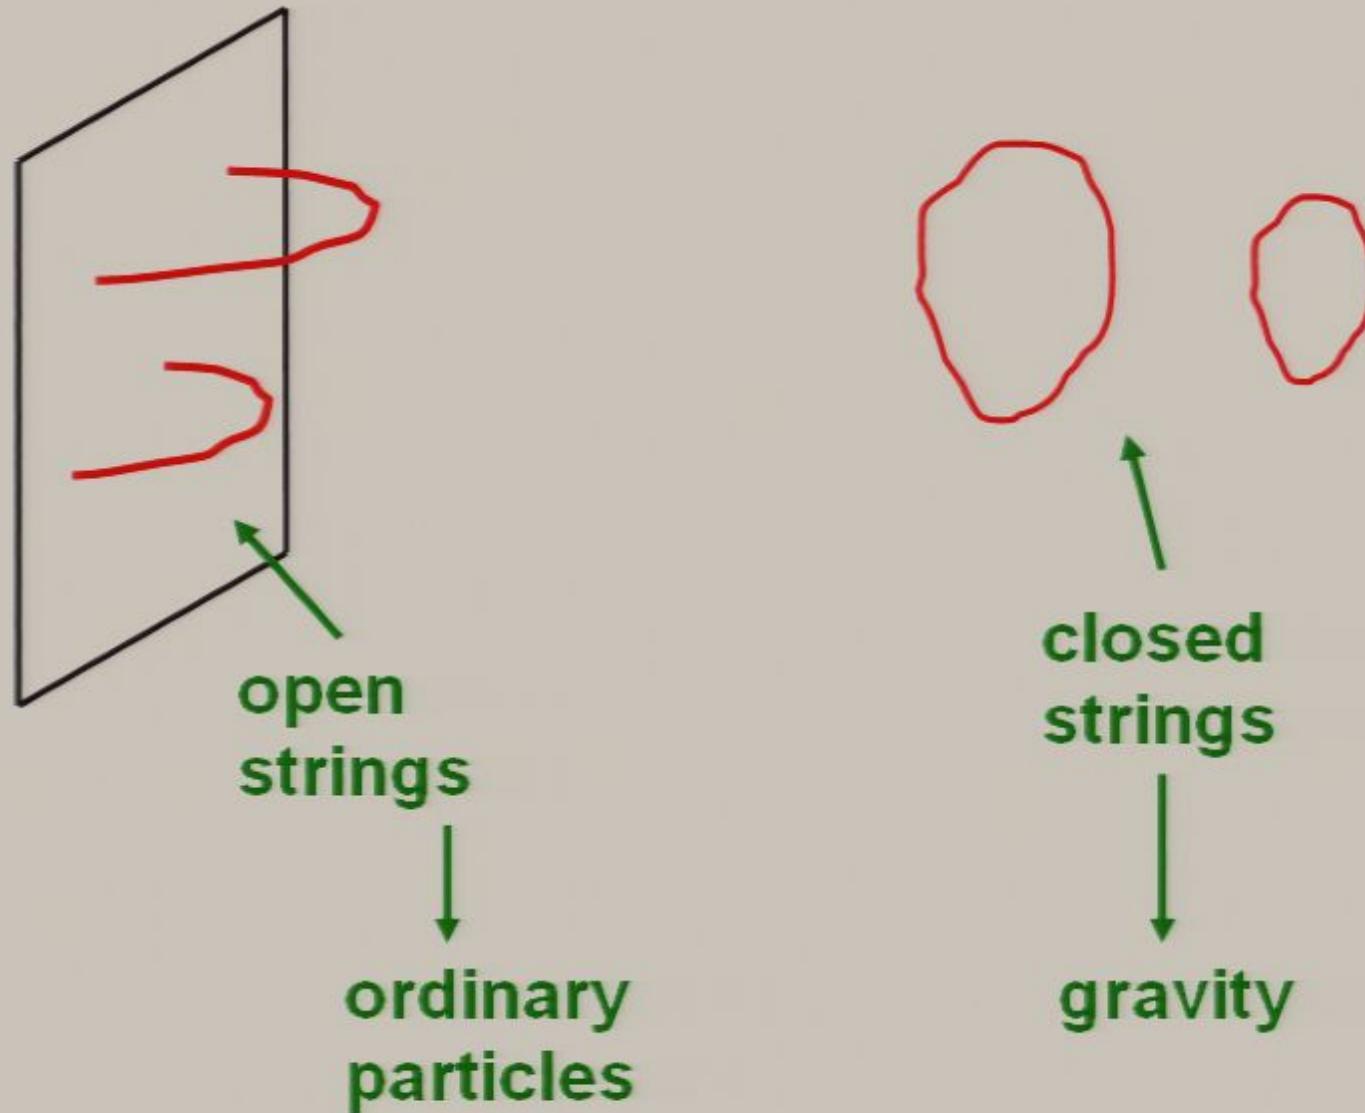

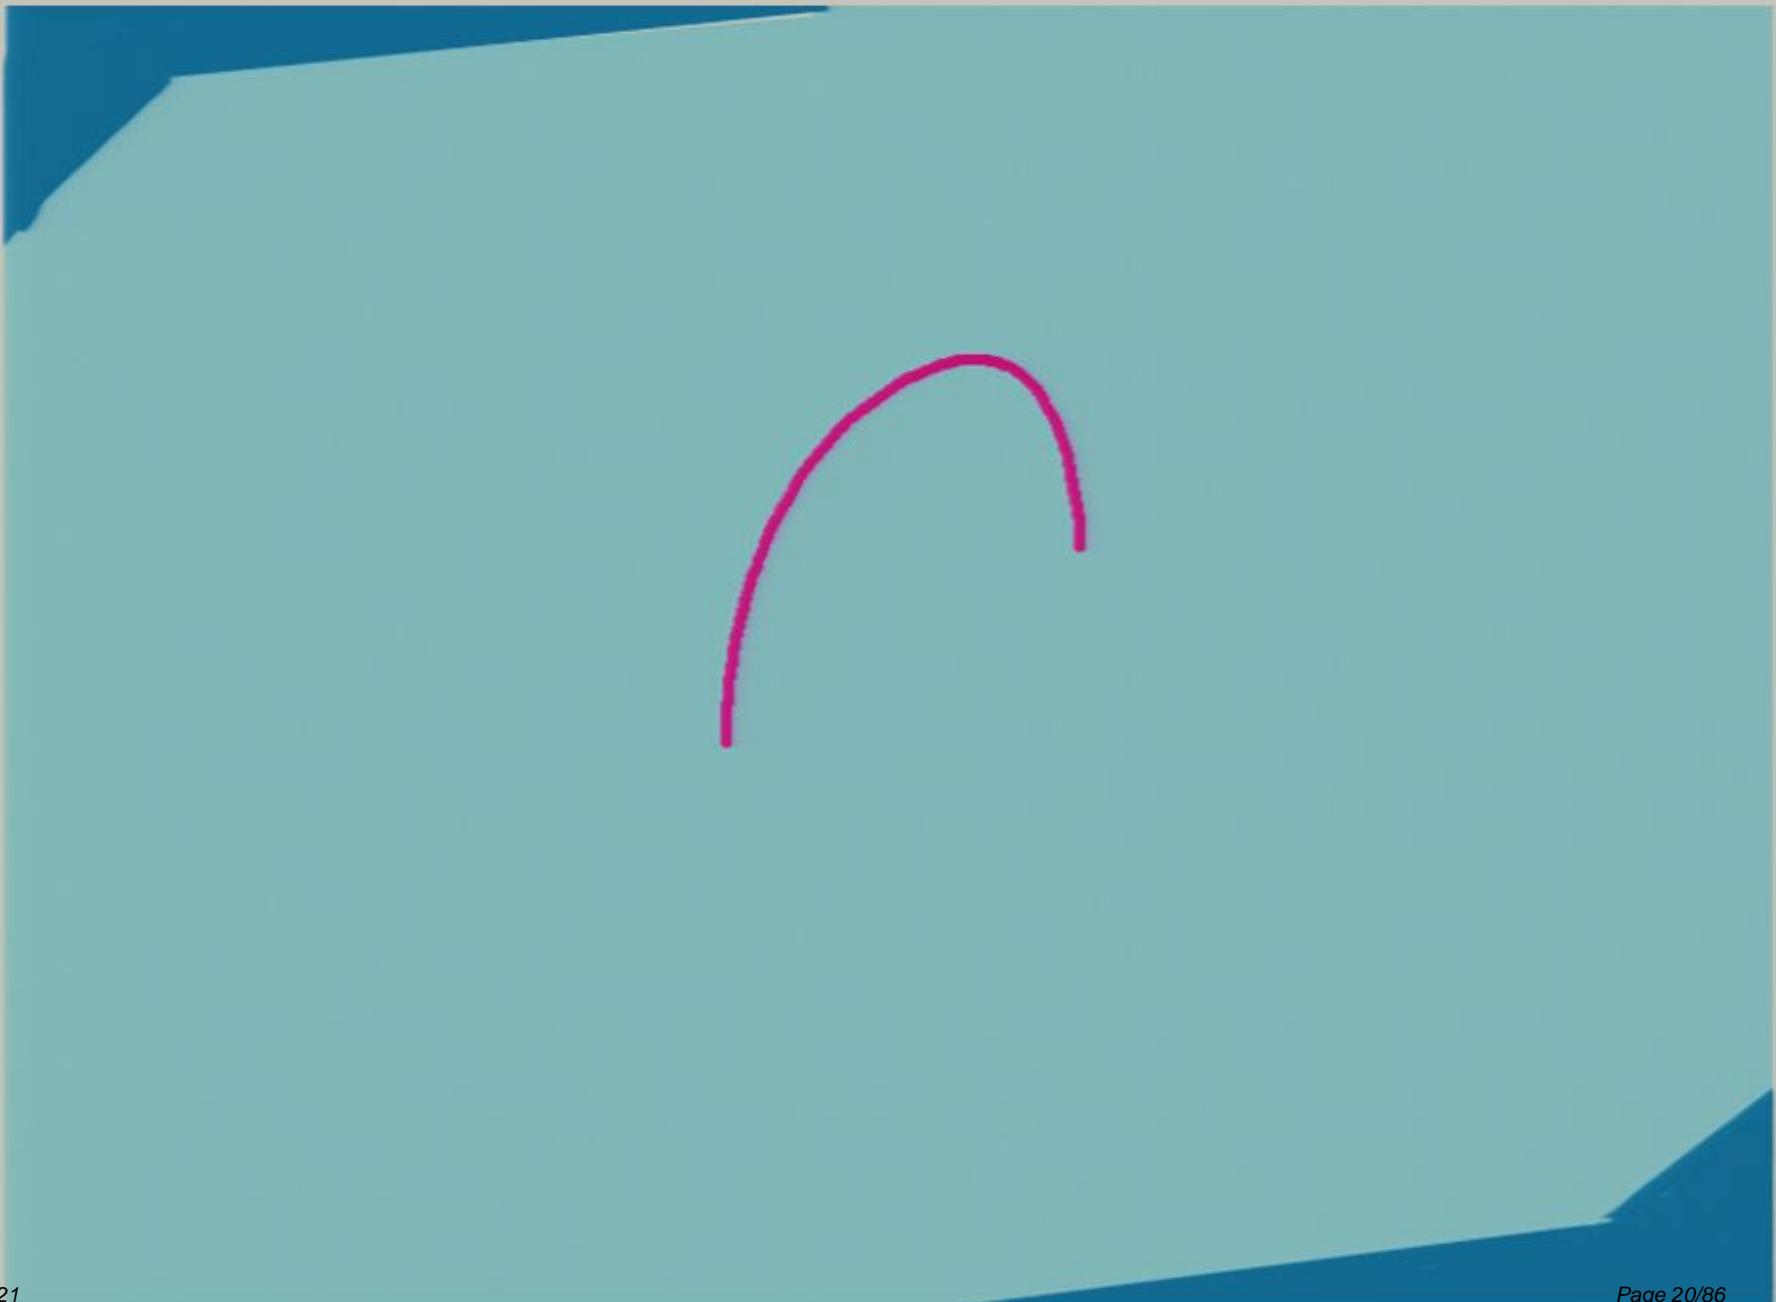

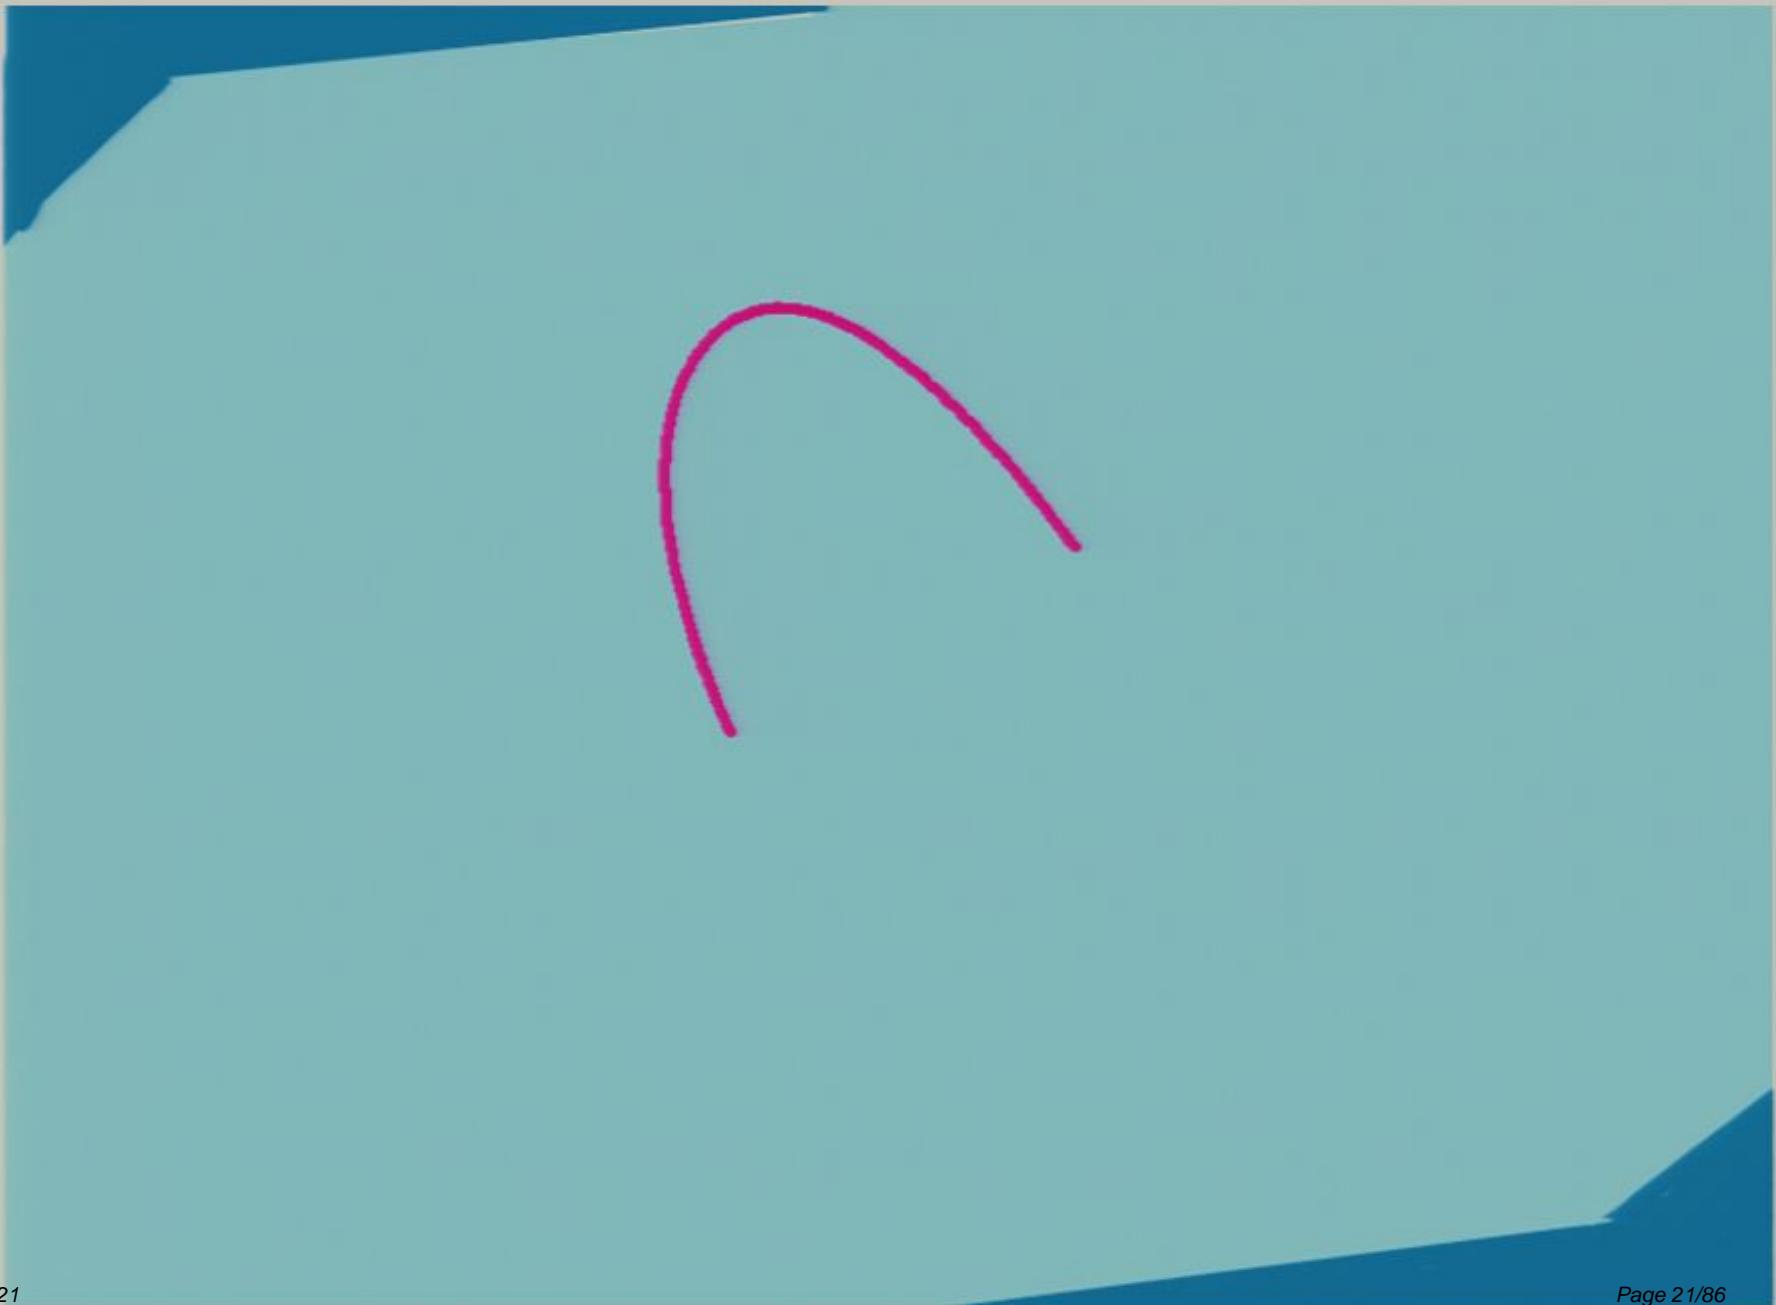

Gravitational shortcut

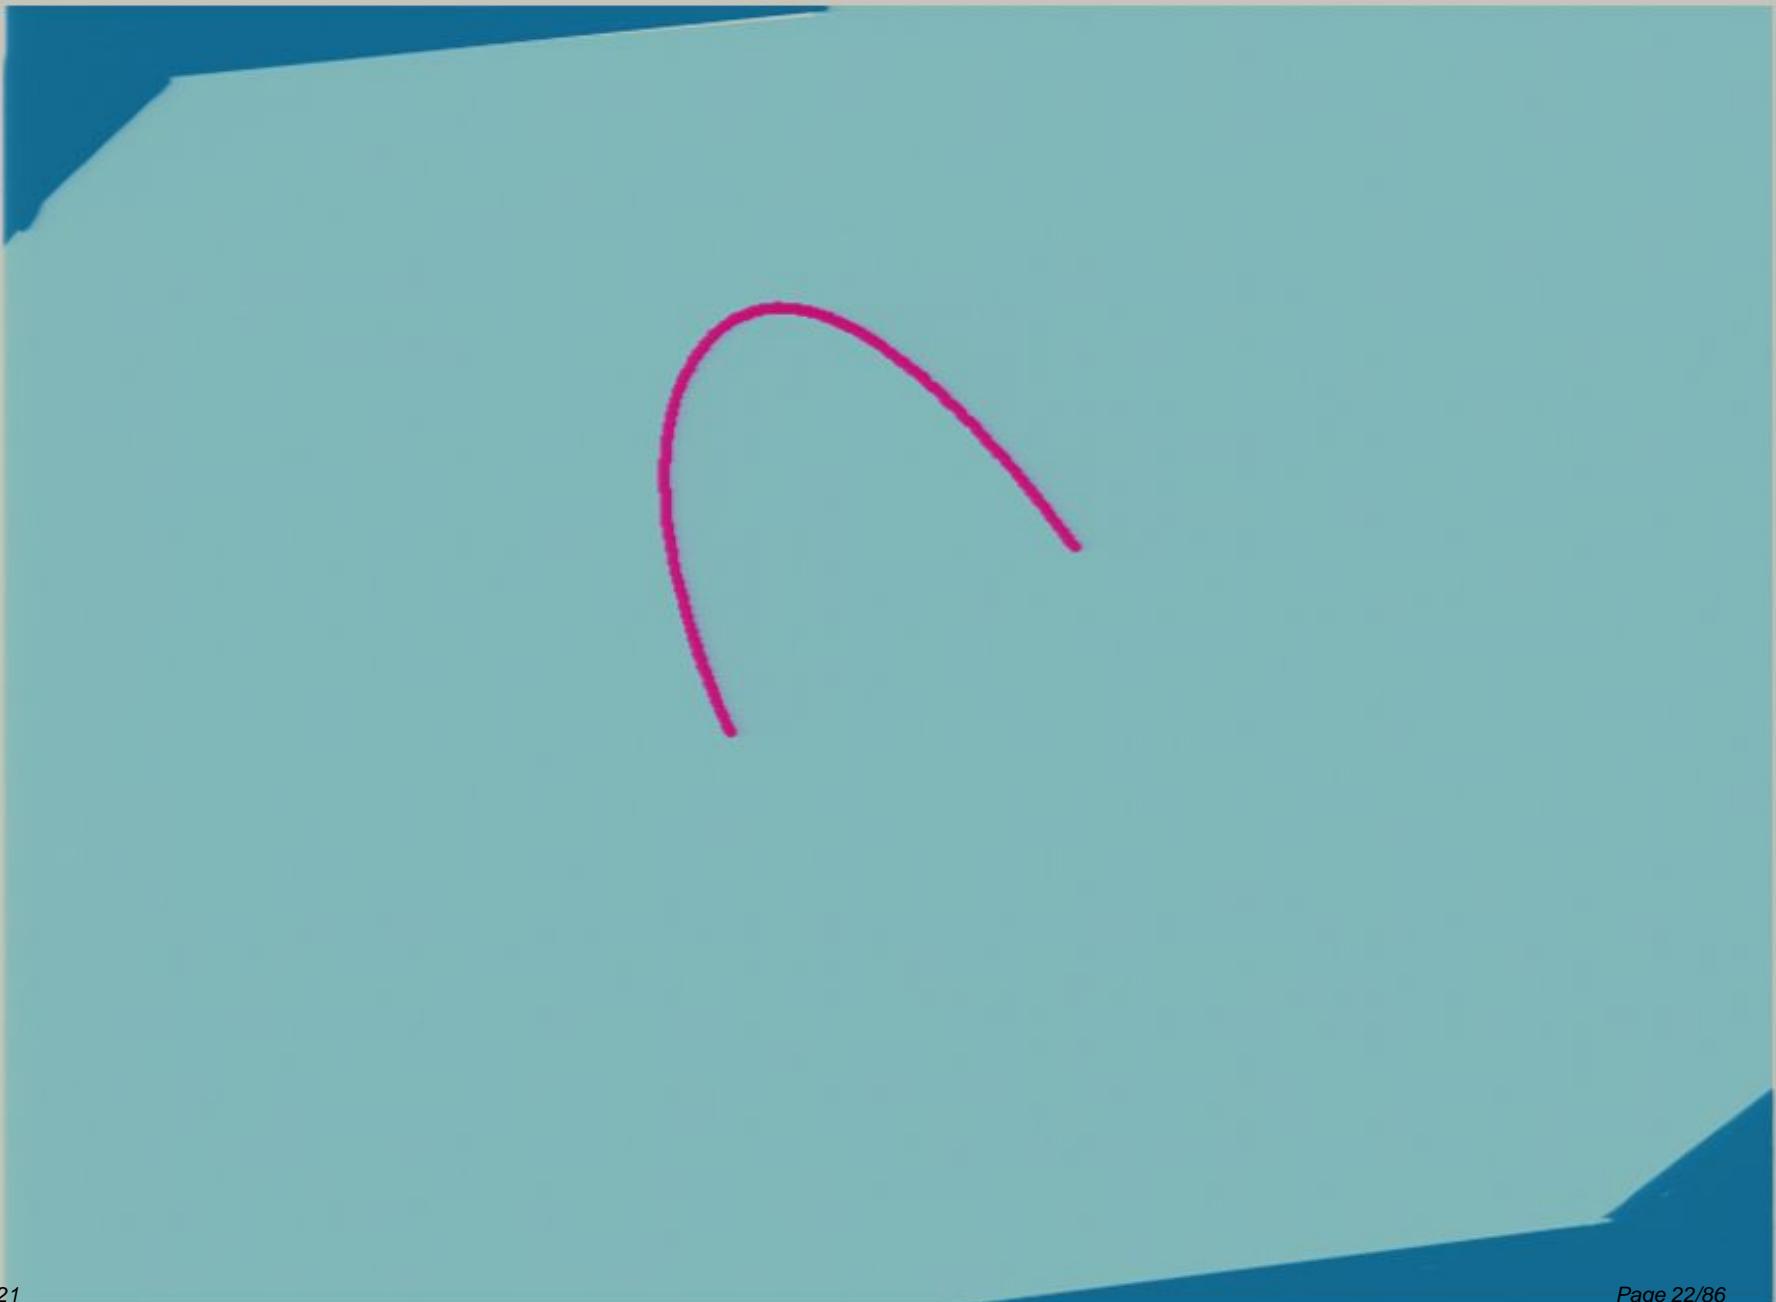

STRING THEORY PICTURE

SOUND WAVE

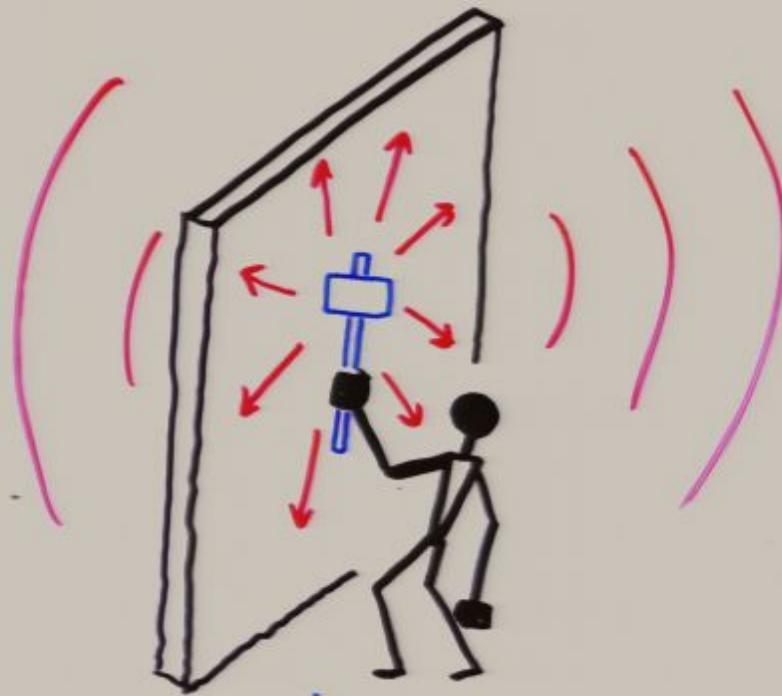

DGP '00

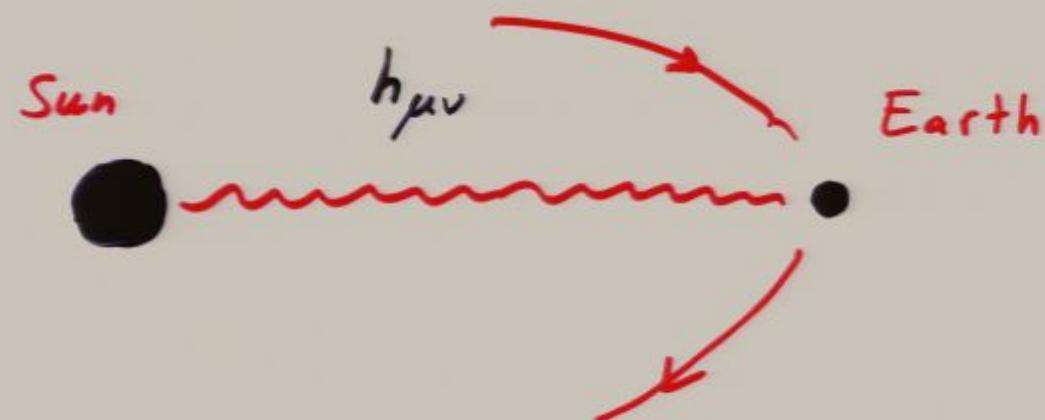

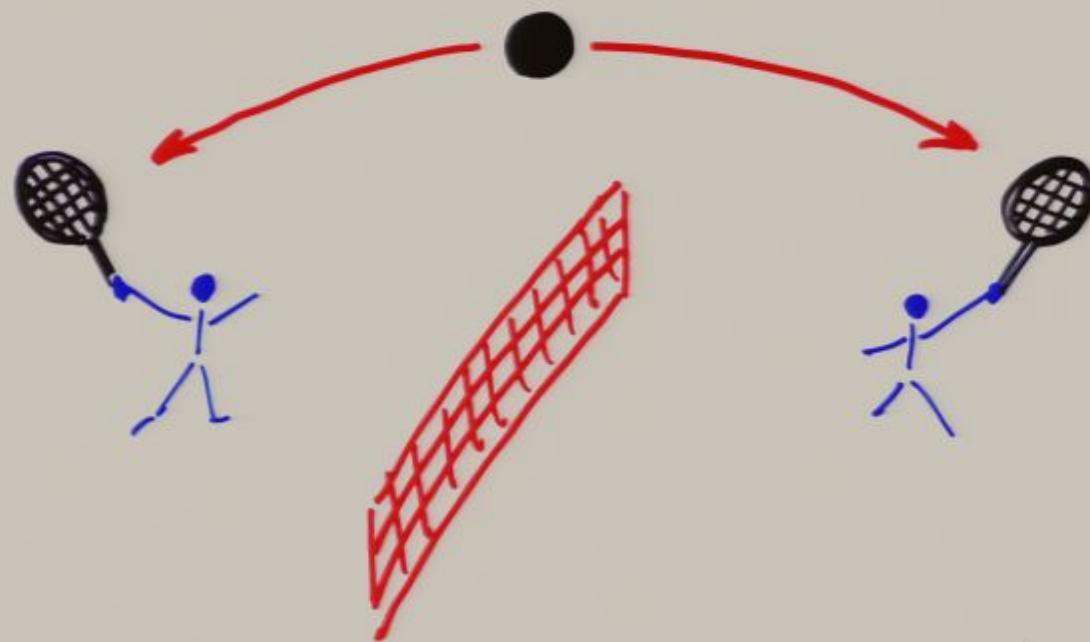

$$\left\{ \delta(y) \square_{2+1} + \frac{1}{r_c} \square_{3+1} \right\} \varphi = \delta'(z)$$

SOUND WAVE

DGP '00

$$\left\{ \delta(y) \square_{2+1} + \frac{1}{r_c} \square_{3+1} \right\} \varphi = \delta'(z)$$

FRW Equation is modified

$$H^2 - H/r_c = \frac{8\pi}{3} G_N \rho$$

Early cosmology in normal $H \gg r_c^{-1}$

Late cosmology $H \rightarrow H = r_c^{-1}$

At late times Universe is self-accelerating!

NO NEED IN DARK ENERGY.

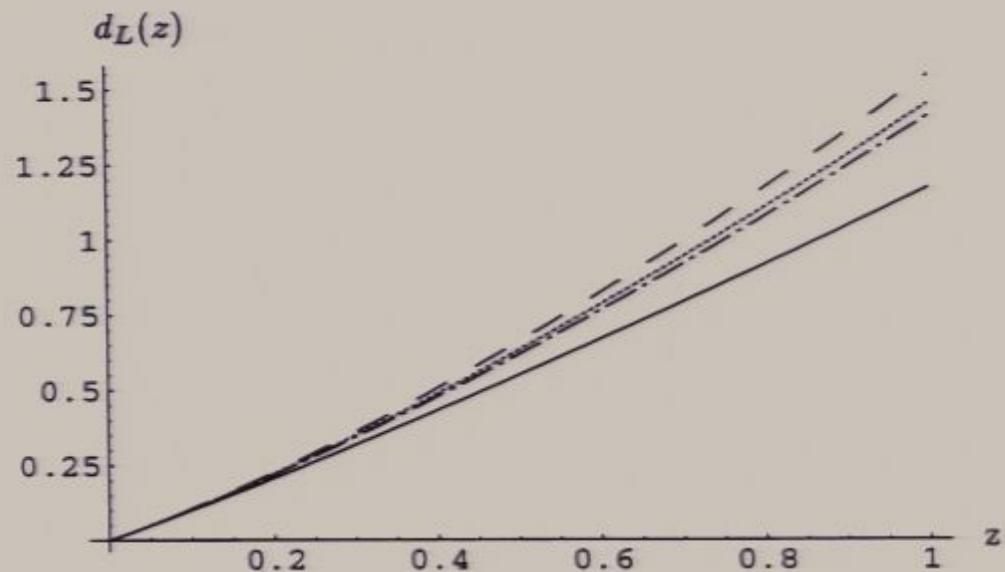

Figure 2: Luminosity distance as a function of red-shift for ordinary cosmology with $\Omega_\Lambda = 0.7, \Omega_M = 0.3, k = 0$ (dashed line), $\Omega_\Lambda = 0, \Omega_M = 1, k = 0$ (solid line), and dark energy with $\Omega_X = 0.7, w_X = -0.6, \Omega_M = 0.3, k = 0$ (dotted-dashed line) and in our model (dotted line) with $\Omega_M = 0.3$ and a flat universe (for which one gets from equation (28) $\Omega_{r_c} = 0.12$ and $r_c = 1.4H_0^{-1}$).

Corrections to Einstein are
Source-dependent

Corrections to Einstein

$$\left\{ \begin{array}{l} \neq \frac{r}{r_c} \\ = \left(\frac{r}{r_*} \right)^{\frac{3}{2}} \quad r_* \ll r_c \end{array} \right.$$

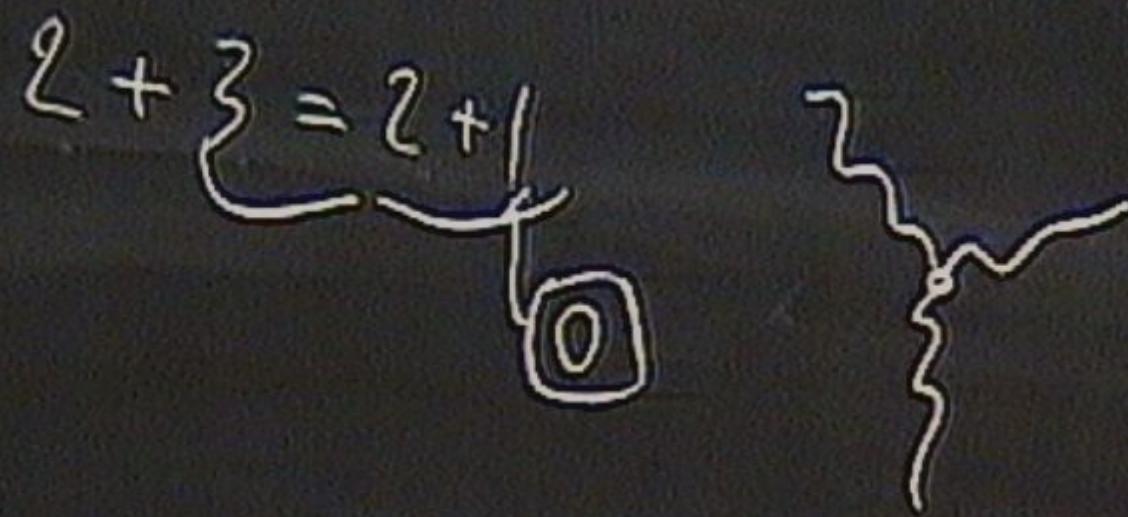

$$r_* = (r_c^2 r_g)^{\frac{1}{3}}$$

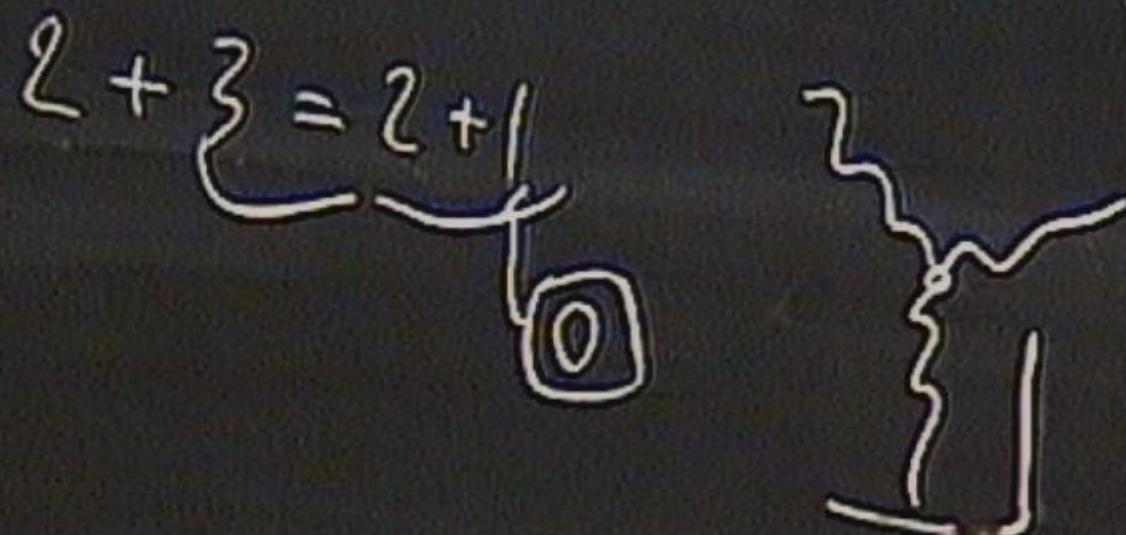

$$2 + \underbrace{3}_{1} = 2 + 1$$

$$2 + 3 = 2 + 1$$

$$2+3=2+1$$

$$2 + 3 = 2 + 1$$

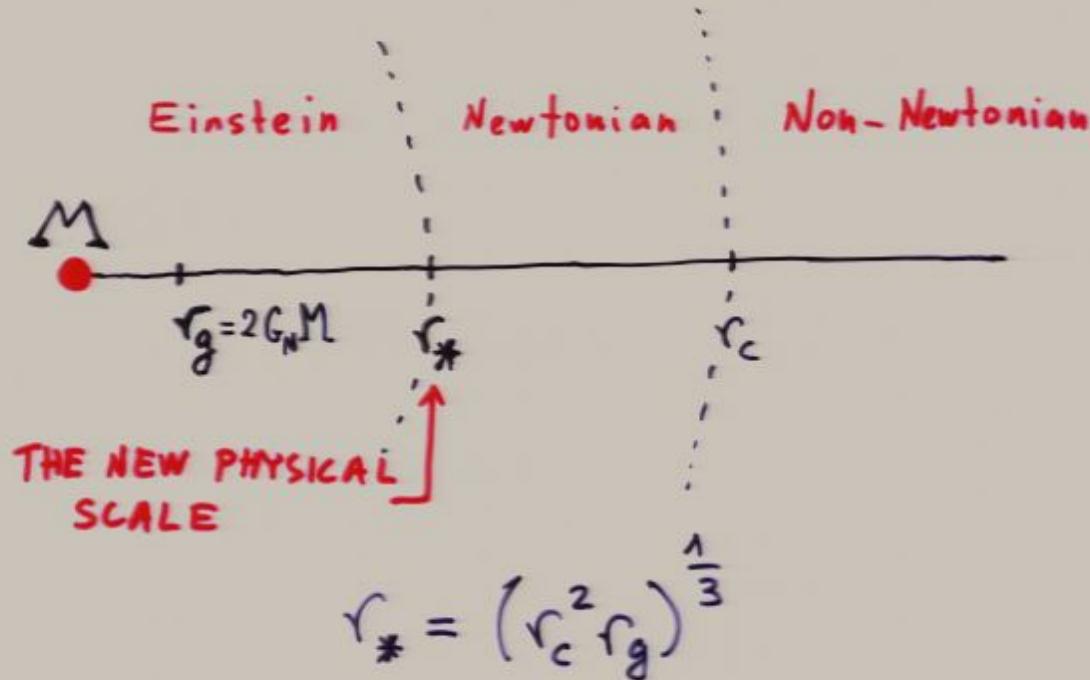

A Feynman diagram illustrating the addition of two integers. The equation $2 + 3 = 2 + 1$ is written above the diagram. The diagram consists of two vertical lines representing external particles. The left line has a wavy segment and ends in a circular vertex. The right line has a similar wavy segment and ends in a vertex that splits into two horizontal lines, representing a particle interacting with a virtual particle.

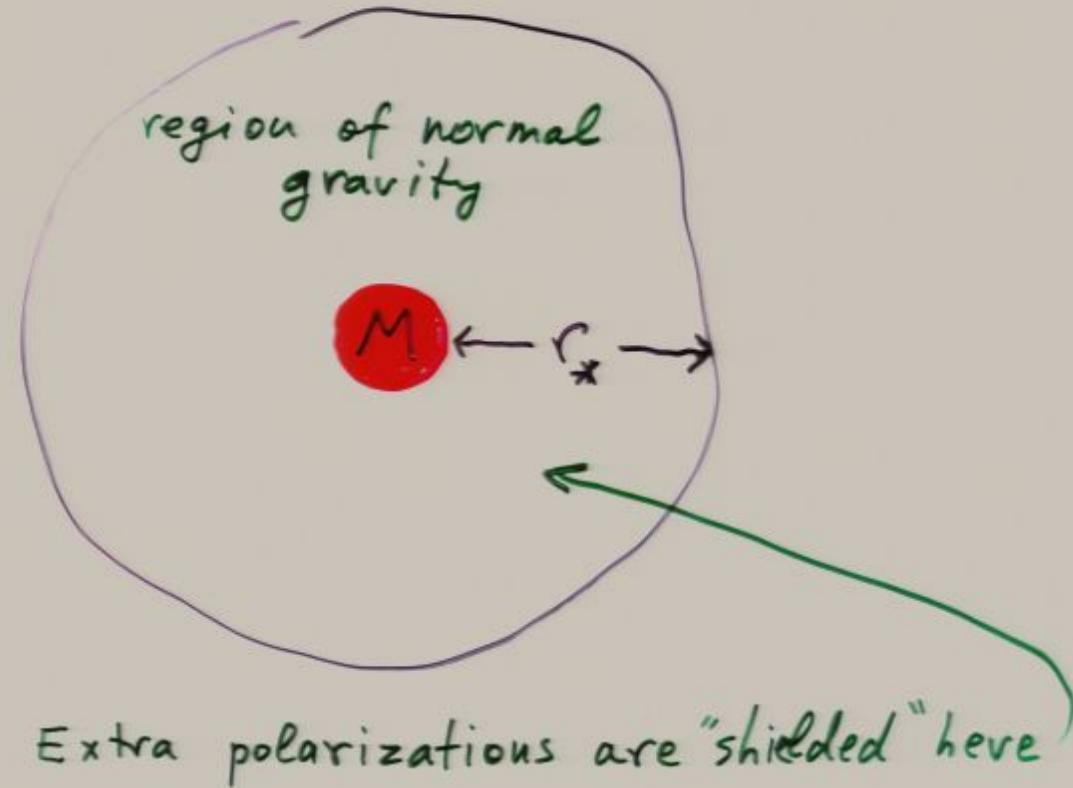

Corrections to Einstein are
Source-dependent

Corrections to Einstein

$$\left\{ \begin{array}{l} \neq \frac{r}{r_c} \\ = \left(\frac{r}{r_*} \right)^{\frac{3}{2}} \quad r_* \ll r_c \end{array} \right.$$

$$r^* \sim (r_c^2 r_g)^{\frac{1}{3}} \ll r_c !$$

$$r_g \equiv 2 G_N M$$

$$2 + 3 = 2 + 1$$

$$\delta = \frac{c}{10^{18} \text{ cm}} \sqrt{F_g}$$

$$2 + 3 = 2 + 1$$

$$\delta = \frac{F}{10^8 \text{ cm}} \sqrt{\frac{F}{r_g}} = 10^{12}$$
