

Title: Introduction to quantum groups 1

Date: Jan 18, 2007 09:00 AM

URL: <http://pirsa.org/07010027>

Abstract: Motivation: From Quantum Mechanics to Quantum Groups

The notion of 'quantization' commonly used in textbooks of quantum mechanics has to be specified in order to turn it into a defined mathematical operation. We discuss that on the trails of Weyl's phase space deformation, i.e. we introduce the Weyl-Moyal starproduct and the deformation of Poisson-manifolds.

Generalizing from this, we understand, why Hopf-algebras are the most genuine way to apply 'quantization' to various other algebraic objects - and why this has direct physical applications.

# 1. Motivation: From Quantum Mechanics to Quantum Groups

↳ Motivation: From Quantum Mechanics to Quantum Groups

---

o Quantization: math. terms:

1. Motivation: From Quantum Mechanics to Quantum Groups

o Quantization: math. terms:  $\hbar$ ,  $R^{\text{ab}}$ ,  $\mathcal{R}$ ,  $\mathcal{F}$

1. Motivation: From Quantum Mechanics to Quantum Groups

- o Quantization: math. terms:  $\hbar, \mathcal{R}^{ab} | \mathcal{R}, \mathcal{J}$
- o Duality  $\mathcal{J}_\hbar(G) | U_\hbar(\mathfrak{g})$

↳ Motivation: From Quantum Mechanics to Quantum Groups

- Quantization: math. terms:  $\hbar, \mathbb{R}^{ab} \mid \mathcal{R}, \mathcal{F}$
- Duality  $\mathcal{F}_1(G) \mid U_q(\mathfrak{g})$
- Representation: the need  $\Delta$  coproducts

↳ Motivation: From Quantum Mechanics to Quantum Groups

- Quantization: math. terms:  $\hbar, \mathbb{R}^{ab} \mid \mathcal{R}, \mathcal{F}$
- Duality  $\mathcal{F}(G) \mid U_q(\mathfrak{g})$
- Representation: the need  $\Delta$  coproducts

$$\mathfrak{g} = \langle x^+, x^-, y, x^0, y^0 \rangle$$

1. Motivation: from Quantum Mechanics to Quantum Groups

- o Quantization: math. terms:  $\mathfrak{g}, \mathbb{R}^n, \mathfrak{a} \mid \mathfrak{K}, \mathfrak{J}$
- o Duality  $\mathfrak{J}(\mathfrak{g}) \mid \mathfrak{U}(\mathfrak{g})$
- o Representations: the need  $\Delta$  coproducts

$$\mathfrak{g}_1 = \mathfrak{K} \oplus \mathfrak{J} = \mathfrak{g} \oplus \mathfrak{K} \oplus \mathfrak{J}$$

1.1 Moyal-Weyl phase space quantization

# 1. Motivation: From Quantum Mechanics to Quantum Groups

- o Quantization: math. terms:  $*_{\hbar}, \mathbb{R}^{ob} M \mid \mathcal{R}, \mathcal{F}$
- o Duality  $\mathcal{F}(G) \mid \mathcal{U}(\mathfrak{g})$
- o Representation: the need  $\Delta$  coproducts

$$\mathfrak{g} = x^{\mu} \cdot x^{\nu} \cdot (g_{\mu\nu} x^{\mu} x^{\nu} + x^{\mu} (g_{\mu\nu} x^{\nu}))$$

## 1.1 Moyal-Weyl phase space quantization

### 1.1 Def

Let  $M$  be finite-dim manifold over a field  $\mathbb{K}$  (and  $\mathcal{F}(M) = C^{\infty}(M, \mathbb{K})$ )

# 1. Motivations: from Quantum Mechanics to Quantum Groups

- o Quantization: math. tools:  $\ast_h, \mathbb{R}^{nb}$  or  $\mathbb{R}, \mathbb{F}$
- o Duality  $\mathcal{F}(G) \mid \mathcal{U}(g)$
- o Representation: the need  $\Delta$  coproducts

$$g_i = x^i, x^j = (g_i, x^j), x^k = (g_i, x^k)$$

## 1.1 Moyal-Weyl phase space quantization

### 1.1 Def

Let  $M$  be finite-dim manifold over a field  $\mathbb{K}$  (and  $\mathcal{F}(M) = \mathcal{C}^\infty(M, \mathbb{K})$ )  
 If there exists a bracket  $\{\cdot, \cdot\}$

$$\{\cdot, \cdot\} : \mathcal{F}(M) \times \mathcal{F}(M) \longrightarrow \mathcal{F}(M)$$

$$\{ \cdot, \cdot \} : \mathcal{F}(M) \times \mathcal{F}(M) \rightarrow \mathcal{F}(M)$$

with the properties

$$\{ \varphi, \omega \} = -\{ \omega, \varphi \} \quad \text{antisymmetric}$$

$$\{ \varphi \cdot \omega, \psi \} = \varphi \cdot \{ \omega, \psi \} + \{ \varphi, \psi \} \cdot \omega \quad \text{Leibniz-rule}$$

$$\{ \{ \varphi, \omega \}, \psi \} + \text{cycl.} = 0 \quad \text{Jacobi-id.}$$

then  $M$  is called a Poisson-Manifold

with the properties

$$\{\varphi, \omega\} = -\{\omega, \varphi\} \quad \text{antisymmetric}$$

$$\{\varphi \cdot \omega, \varphi\} = \varphi \cdot \{\omega, \varphi\} + \{\varphi, \varphi\} \cdot \omega \quad \text{Leibniz-rule}$$

$$\{\{\varphi, \omega\}, \varphi\} + \text{cycl.} = 0 \quad \text{Jacobi-id.}$$

then  $M$  is called a Poisson-Manifold

There are two algebraic structures on  $M$

with the properties

$$\{\varphi, \omega\} = -\{\omega, \varphi\} \quad \text{antisymmetric}$$

$$\{\varphi \cdot \omega, \psi\} = \varphi \cdot \{\omega, \psi\} + \{\varphi, \psi\} \cdot \omega \quad \text{Leibniz-rule}$$

$$\{\{\varphi, \omega\}, \psi\} + \text{cycl.} = 0 \quad \text{Jacobi-id.}$$

then  $M$  is called a Poisson-Manifold

There are two algebraic structures on  $M$

1.  $(\varphi \cdot \omega)(m) = \varphi(m) \cdot \omega(m)$
2. Poisson-structure

Example: phase space  $\Gamma = \mathbb{R}^n \oplus \mathbb{R}^n$

Example: phase space  $\Gamma = \mathbb{R}^n \oplus \mathbb{R}^n$  consider to be  
of a Hamiltonian system  $(q, p)$  with  $n$  degrees of freedom  
Poisson-bracket  $\{ \omega, \psi \} = \sum_{i=1}^n \frac{\partial \omega}{\partial q_i} \frac{\partial \psi}{\partial p_i} - \frac{\partial \omega}{\partial p_i} \frac{\partial \psi}{\partial q_i}$

Example: phase space  $\Gamma = \mathbb{R}^n \oplus \mathbb{R}^n$  considered to be  
of a Hamiltonian system  $(q_i, p_i)$  with  $n$  degrees of freedom  
Poisson-bracket  $\{w, \varphi\} = \sum_{i=1}^n \frac{\partial w}{\partial q_i} \frac{\partial \varphi}{\partial p_i} - \frac{\partial w}{\partial p_i} \frac{\partial \varphi}{\partial q_i}$

textbook of QM: 'scheme' of quantization

$$\begin{aligned}
 q_i &\rightarrow \hat{q}_i \\
 p_i &\rightarrow \hat{p}_i \\
 \alpha \hbar &\rightarrow \hbar \\
 \{, \} &\rightarrow \frac{i}{\hbar} [, ]
 \end{aligned}$$

Example: phase space  $\Gamma = \mathbb{R}^n \oplus \mathbb{R}^n$  consider to be  
of a Hamiltonian system  $(q_i, p_i)$  with  $n$  degrees of freedom  
Poisson-bracket  $\{w, \varphi\} = \sum_{i=1}^n \frac{\partial w}{\partial q_i} \frac{\partial \varphi}{\partial p_i} - \frac{\partial w}{\partial p_i} \frac{\partial \varphi}{\partial q_i}$

textbook of QM: 'scheme' of quantization

$$\begin{array}{ll}
 q_i & \rightarrow \hat{q}_i & \varphi & \rightarrow \hat{\varphi} \\
 p_i & \rightarrow \hat{p}_i & & \\
 \mathcal{H} & \rightarrow \mathcal{H} & & \\
 \{, \}_i & \rightarrow \frac{i}{\hbar} [, ] & & 
 \end{array}$$

Example: phase space  $\Gamma = \mathbb{R}^n \oplus \mathbb{R}^n$  consider to be  
of a Hamiltonian system  $(q_i, p_i)$  with  $n$  degrees of freedom  
Poisson-bracket  $\{w, \varphi\} = \sum_{i=1}^n \frac{\partial w}{\partial q_i} \frac{\partial \varphi}{\partial p_i} - \frac{\partial w}{\partial p_i} \frac{\partial \varphi}{\partial q_i}$

textbook of QM: 'scheme' of quantization

$$q_i \rightarrow \hat{q}_i \quad \varphi \rightarrow \hat{\varphi}$$

$$p_i \rightarrow \hat{p}_i$$

$$\lambda \mathbb{1} \rightarrow \lambda \cdot \mathbb{1}$$

$$\{, \}_i \rightarrow \frac{i}{\hbar} [, ]$$

problems: 1. this is no  
homomorphism  
 $\Rightarrow$  ordering prescription

Example: phase space  $\Gamma = \mathbb{R}^n \oplus \mathbb{R}^n$  considered to be  
of a Hamiltonian system  $(q_i, p_i)$  with  $n$  degrees of freedom  
Poisson-bracket  $\{w, \varphi\} = \sum_{i=1}^n \frac{\partial w}{\partial q_i} \frac{\partial \varphi}{\partial p_i} - \frac{\partial w}{\partial p_i} \frac{\partial \varphi}{\partial q_i}$

textbook of QM: 'scheme' of quantization

$$q_i \rightarrow \hat{q}_i \quad \varphi \rightarrow \hat{\varphi}$$

$$p_i \rightarrow \hat{p}_i$$

$$\mathbb{R} \rightarrow \mathbb{R} \cdot \mathbb{1}$$

$$\{ \cdot, \cdot \} \rightarrow \frac{i}{\hbar} [ \cdot, \cdot ]$$

problems: 1. this is no  
homomorphism  
 $\Rightarrow$  ordering prescription

$$\mathcal{L}(\mathcal{F}) \circ \mathcal{L}(\mathcal{G}) \rightarrow \mathcal{L}(\mathcal{F}\mathcal{G})$$

with the properties

$$\{\varphi, \omega\} = -\{\omega, \varphi\} \quad \text{antisymmetric}$$

$$\{\varphi \cdot \omega, \psi\} = \varphi \cdot \{\omega, \psi\} + \{\varphi, \psi\} \cdot \omega \quad \text{Leibniz-rule}$$

$$\{\{\varphi, \omega\}, \psi\} + \text{cycl.} = 0 \quad \text{Jacobi-id.}$$

then  $M$  is called a Poisson-Manifold

There are two algebraic structures on  $M$

1.  $(\varphi \cdot \omega)(m) = \varphi(m) \cdot \omega(m) \quad [\varphi, \omega] = 0 \rightarrow [\varphi, \omega] \neq 0$
2. Poisson-structure

2. Ordnung Preskription

Solution:  $\mathcal{F}(\Gamma) \equiv (\mathcal{F}(\Gamma), \cdot) \rightarrow ($

2. ordering prescription

solution:  $\mathcal{F}(\Gamma) \equiv (\mathcal{F}(\Gamma), \cdot) \rightarrow (\mathcal{F}(\Gamma), \star_n)$

## 2. ordering prescription

solution:  $\mathcal{F}(M) \equiv (\mathcal{F}(M), \cdot) \rightarrow (\mathcal{F}(M), \star_h) \equiv \mathcal{J}_h^{(1)}$

### 1.2. Def

Let  $(M, \omega, \mathbb{K})$  be a Poisson manifold

For  $h \in \mathbb{K}$   $M_h = (M, [\cdot, \cdot]_h, \mathbb{K})$  is called a quantization of  $M$

iff

$$\forall f_1, f_2 \in \mathcal{F}(M) \cdot \frac{[f_1, f_2]_h}{h} = \{f_1, f_2\} \text{ mod } (h)$$
