

Title: What is the Multiverse?

Date: Sep 02, 2008 02:00 PM

URL: <http://pirsa.org/08090043>

Abstract:

# What is the Multiverse?

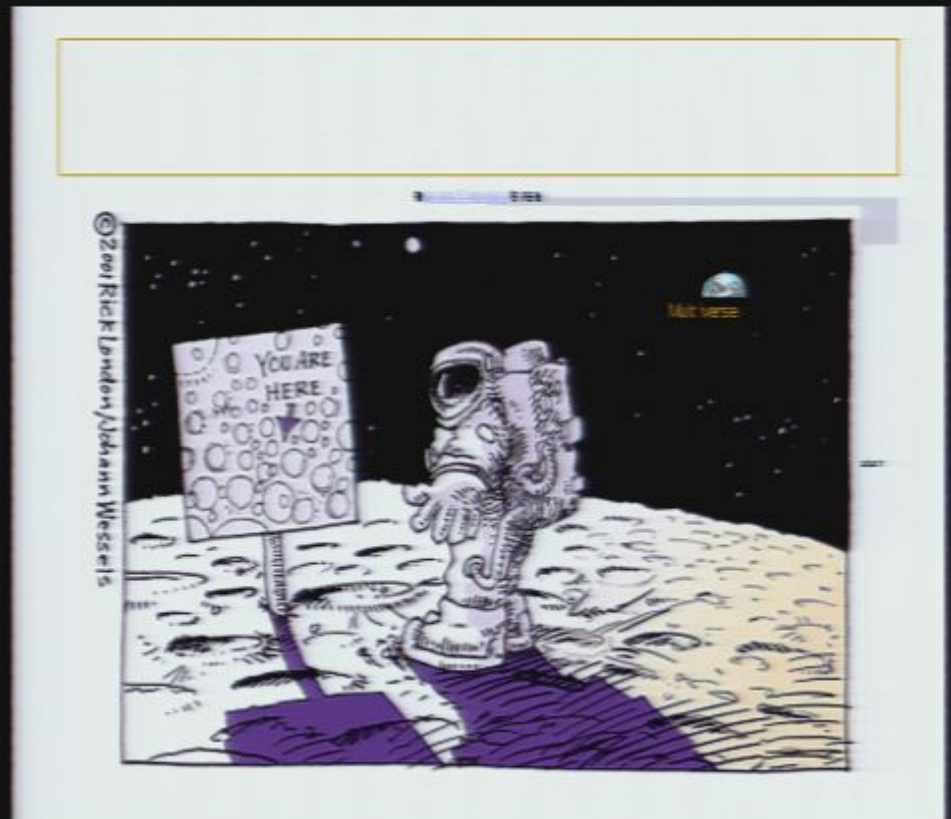

# But why this 'change of heart' ?

- **By Necessity**

and,

- **By Experience**

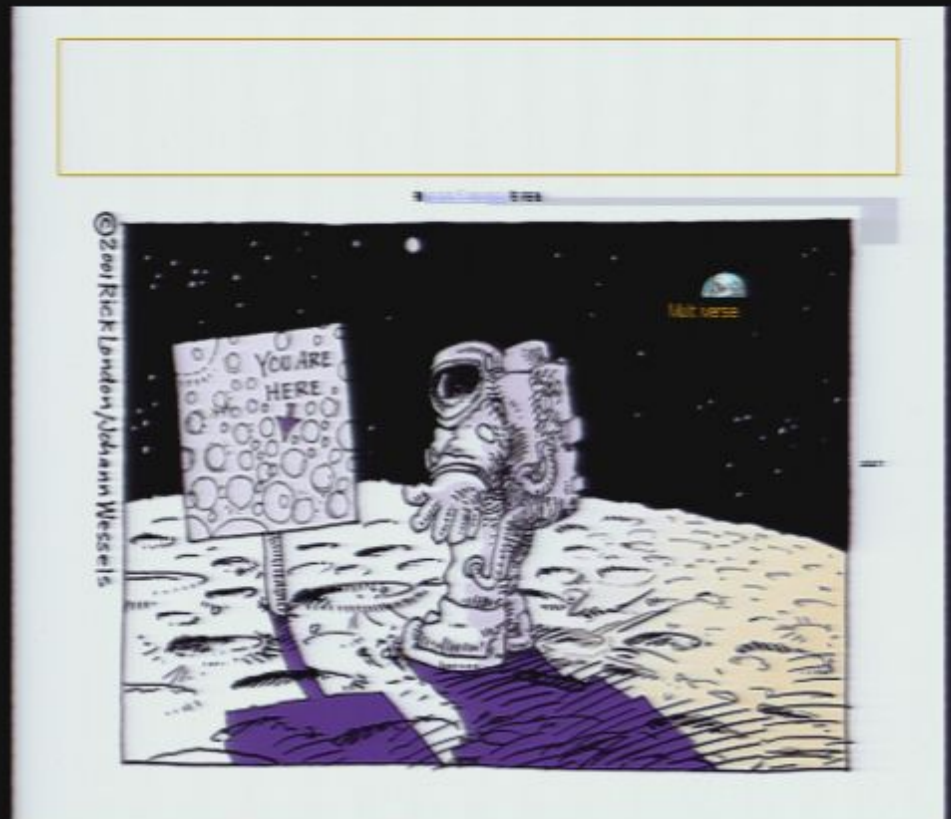

# But why this 'change of heart' ?

- **By Necessity**

and,

- **By Experience**

# A Necessary Extension of Physics

## 1. Mystery of the Initial Conditions of our universe needs a multiverse:

*How else can we ask the question: why did we start with these I.C./Universe -without implying - as compared to what other choices?*

(long list of such questions, why these values for: Lambda, G, e).

**Fundamental Questions about our Universe Do imply the Existence of a Phase Space for the Initial Conditions, a.k.a, a Landscape**

# A Necessary Extension of Physics, ctd...

**2.** A 'black box' model creates huge discrepancies with what's known of our observable universe:

\*

Boltzmann Brains? Arrow of Time? Inflation? 'Anthropics'

**3.** Inflationary Big Bang Theory already predicts a universe much larger than the observable one:

\*

there is no good reason to why stop there. After all, Big Bang is only a local process in the neighborhood of our I.C. .

\*

there is no indication or criterion that a local theory is cohesive and self-consistent.

# Inflation: Such Extraordinary Unlikely Initial Conditions!

Need to extend to Multiverse?

- What selected these Initial Conditions?

Chances:  $1 / 10^{10^{122}}$  !

- What Banged? Where did this come from?

# Puzzle of Initial Conditions and the Multiverse

**BUT: GRAVITY IS TRICKY!**

**“REALLY SPECIAL” OR JUST “OUT OF EQUILIBRIUM”**

**RARE FLUCTUATION? DYNAMIC SELECTION?**

$$\text{Max}[V, S] = \text{Eq|b!}$$

$$S = \text{Log}[V]$$

$$\text{Min}[V, S] = \text{Non Eq|b!!}$$

# The Trouble with I.C.

Probability to start with Big Bang,

$$P = \text{Exp} [S], \text{ Entropy } S = 1/\text{Lambda.}$$

Extraordinarily Unlikely Event | Anything Else More Likely !

Immediate Troubles:

“Too Special”, “Arrow of Time”, “Boltzman Brains” }

# A Computational View of the Multiverse: Information

- Information is contained in Correlations.
- Entropy parameterizes Information.
- We know Exactly how to calculate Correlations.
- **Then:** why don't we understand the Entropy of the Universe?
- **Because:** It is not clear which correlations to include?

# Experience with Multiverses?

The 3 Major Theories in Modern Physics Have Led to a Multiverse Prediction !!

They are

---

- Quantum Mechanics, (Many-World Interpretation)
- Inflation, (Almost Generically of Eternal Nature)
- String Theory, (the Landscape)

---

They cannot all correspond to Reality unless Identical

## Inflation: Simple and in Agreement with Observations. BUT:

- Big Bang Inflation: Universe Bangs into Accelerated Expansion
- But once Inflation Starts, almost generically it never stops - Eternally producing New Bubbles - the Inflationary Multiverse
- Inflationary Universe already much larger than its observable subdomain

# Experience with Multiverses?

The 3 Major Theories in Modern Physics Have Led to a Multiverse Prediction !!

They are

---

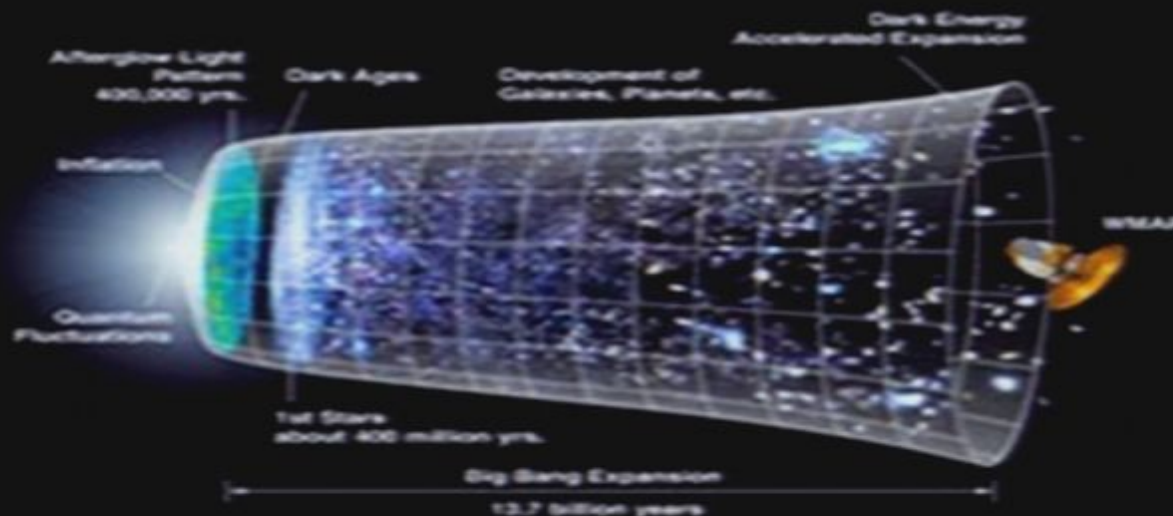

- Quantum Mechanics, (Many-World Interpretation)
- Inflation, (Almost Generically of Eternal Nature)
- String Theory, (the Landscape)

---

They cannot all correspond to Reality unless Identical

## Inflation: Simple and in Agreement with Observations. BUT:

- Big Bang Inflation: Universe Bangs into Accelerated Expansion
- But once Inflation Starts, almost generically it never stops - Eternally producing New Bubbles - the Inflationary Multiverse
- Inflationary Universe already much larger than its observable subdomain

# String Theory Landscape

Circa 2002: Advances in String Theory Result in Not Just 1 vacua for A Universe Like Ours. More Like  $10^{500}$  of Them?!

(joined the 'Landscape' By L. Susskind)

A proton is made of quarks and gluons...

→  $10^{-14}$  cm ←

... and each particle is really a string

→  $10^{-35}$  cm ←  
(Planck length)

**CRISIS: A whole LANDSCAPE of Universes... but:  
How do we select our Universe in this multitude?**

Landscape Discovery Considered a **Crisis** because we hoped STH would produce 1 unique solution for a (3+1)-D world that was like ours

- Reason: We had embraced a REDUCTIONIST view. But instead ...

### Il marchio del contatto

Nel disegno, il nostro universo nei suoi primi stadi, di fronte al mondo parallelo a vicinanza tra un vasto si instaura.

Universo parallelo "a contatto" con il nostro

Il nostro universo

Vuoto creato dal "contatto" con l'altro universo

Vasto primordiale (da cui nascono gli universi)

Universo in formazione (i suoi colori corrispondono a leggi fisiche diverse)

# String Theory Multiverse

## Advocating a *MERITOCRATIC* view

It's applied to the STH Landscape, by suggesting :

- \* to view the Landscape as the Phase Space of Initial Conditions
- \* and allow the Wavefunction of the universe to propagate on the Landscape, while including Decoherence mechanism
- \* Selection of 'Survivor Universes', such as ours, based on the dynamics of gravitational and matter degrees of freedom – a 'tug of war'.

*In this view, the STH Landscape has to be expected as a STH Multiverse Prediction*

**It Embeds the Landscape of String Theory into the Quantum Mechanics Multiverse**

## 2 Views For TOE

- “Reductionist”: TOE must yield 1 unique universe
- “Meritocratic”: TOE must provide an ensemble of possible universes

# Features of a Generic Multiverse

Perhaps some new theory of Quantum Gravity will be conceived in the future...

- *I believe, it has to contain a **Multiverse Prediction**, part of which will survive deconstruction in the low energy limit.*
- *The Multiverse of any theory will likely have two phases: **quantum and classical**, since our universe has to be part of it.*
- *Ultimately, **Only One** Multiverse can correspond to Physical Reality !*

# Consensus on Definitions:

- Multiverse :

The ensemble of all possible universes predicted by the underlying theory, i.e. all there is.

- Universe :

*Domain of Spacetime in which points were causally connected at some timeslice ' $t=0$ ' of their past lightcone.*

# Multiverse Types and Hierarchy:

With current limited knowledge, we can expect these types and hierarchy of multiverses:

- TYPE A: Different Laws Across the Multiverse
- TYPE B: Same Laws but Different Constants
- TYPE C: Varying Dimensionality 'D' Across the Multiverse, which can further subdivide into above Types -  **$A^D, B^D$** .

# Consensus on Definitions:

- Multiverse :

The ensemble of all possible universes predicted by the underlying theory, i.e. all there is.

- Universe :

*Domain of Spacetime in which points were causally connected at some timeslice ' $t=0$ ' of their past lightcone.*

# 'Russian Dolls' Hierarchy

TYPE C

# *Differences in the Interpretation*

## MULTIVERSE : A Mathematical or a Physical Entity?

### Only 1 Multiverse can Correspond to Physical Reality

- I do share Tegmark's view to allow all mathematical solutions on equal footing of existence, as candidates for correspondence to reality
- But : I take them as equal contenders only up to the Inclusion of Dynamics. I would suggest we include dynamics for determining the probability of their physical existence and correspondence.

( Not quite a Platonic view ) .

# But Dynamical Description Demands Space and Time

A Very Simple Question, (50 years after Everett..) : In what Space and Time do the Multiverse (s) Exist ? How can we decide this?

I Would like to Postulate 2 Principles:

- **SPACE**: The Principle of 'Domains Correlations'

If correlations exist, then multiverse embedded in One Bckg Spacetime (Connected)

Connected

Disconnected

- **TIME**: Principle of No 'Perpetual Motion', based on Time-Translation Symmetry

Energy cant be created and destroyed in/ across domains. Then only one time parameter in common for all domains.

- Possibly Fundamental in TYPE B?!
- Emergent in TYPE A ?

# (IF QM Survives)

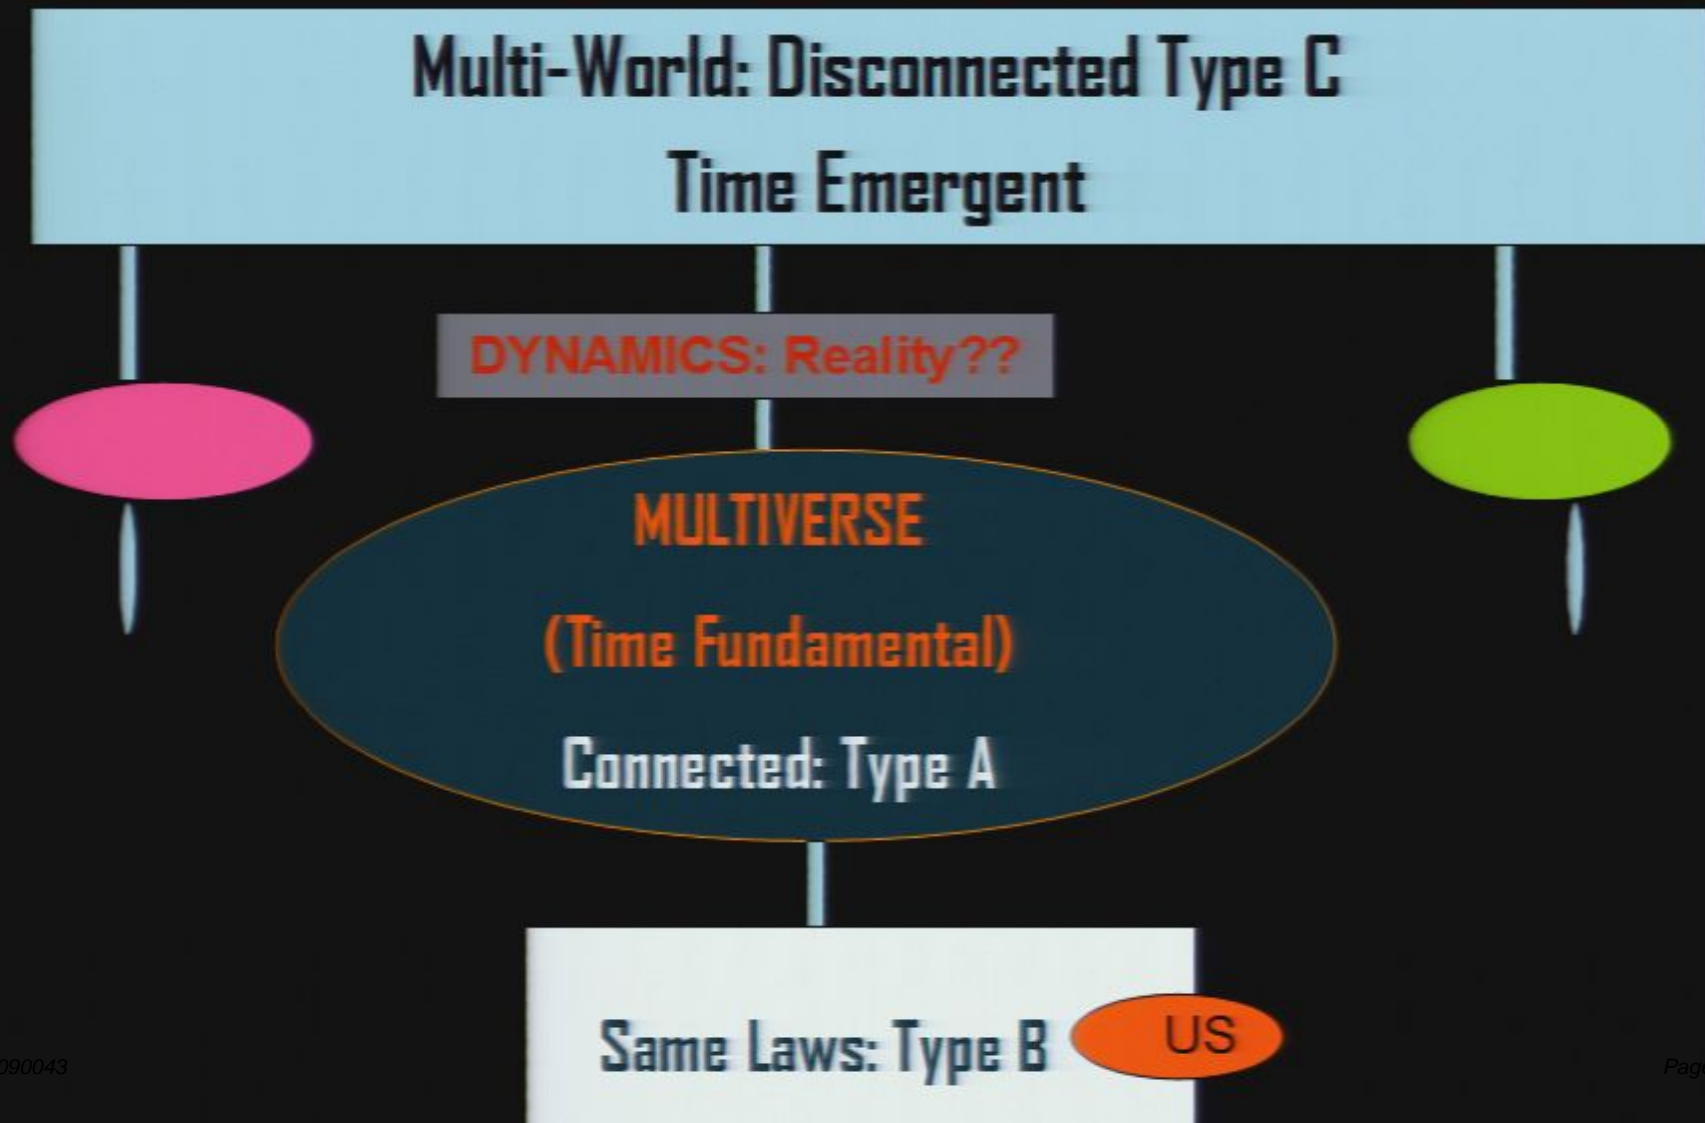

And, if Nature is Economic, then:

**\*\* Time-Translation Symmetry + Domain Correlation Reduce the Class of Multiverses corresponding to Physical Reality, to :**

**\* Only the Connected Multiverse where Time is Fundamental \***

- i) The Multiverse does not need have same Dim. as its domains: correlations can exist in higher Dim.
- ii) We could distinguish Disconnected Type as Multi-world instead of Multiverse.

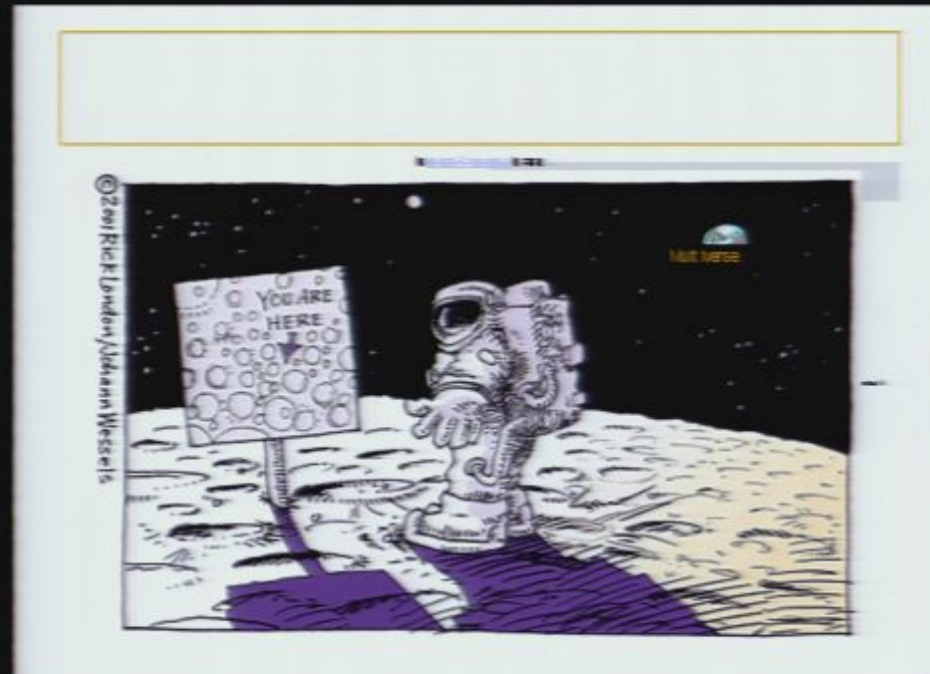

# Hierarchy: Dynamics+ Quantum Mechanics

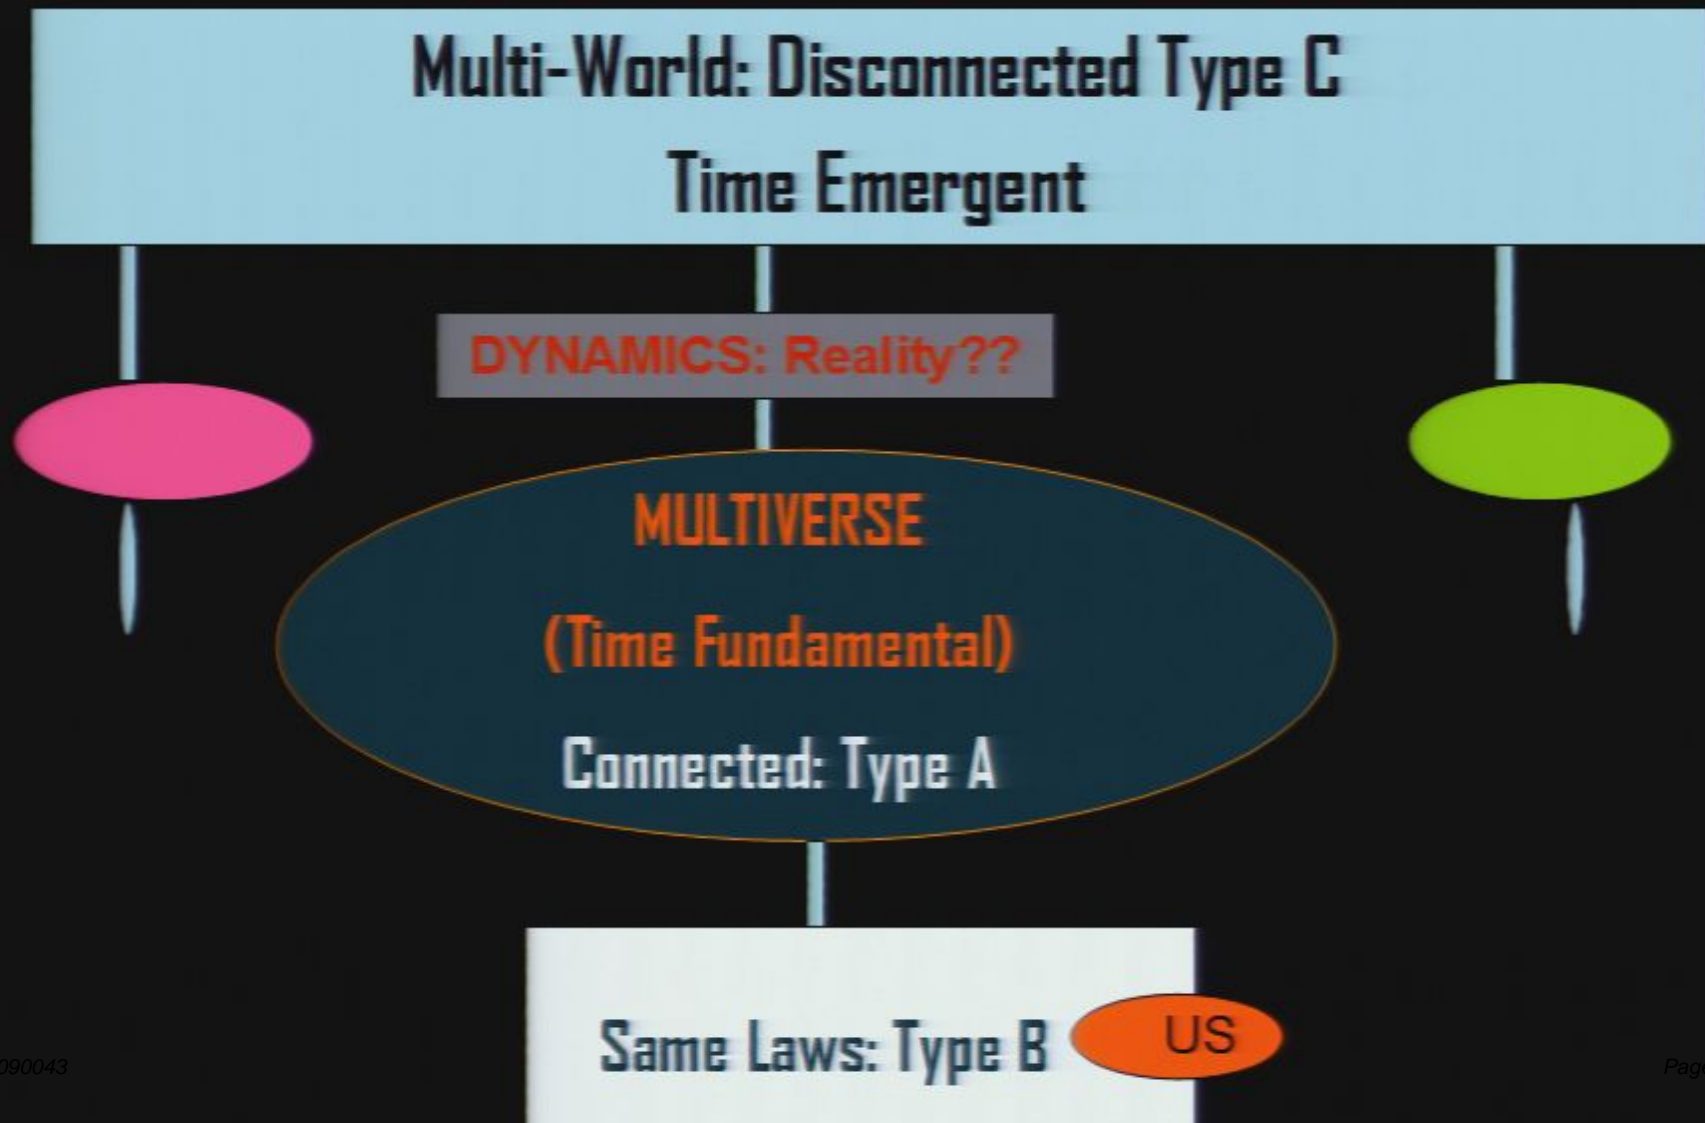

# Contemplating Observational Imprints

?

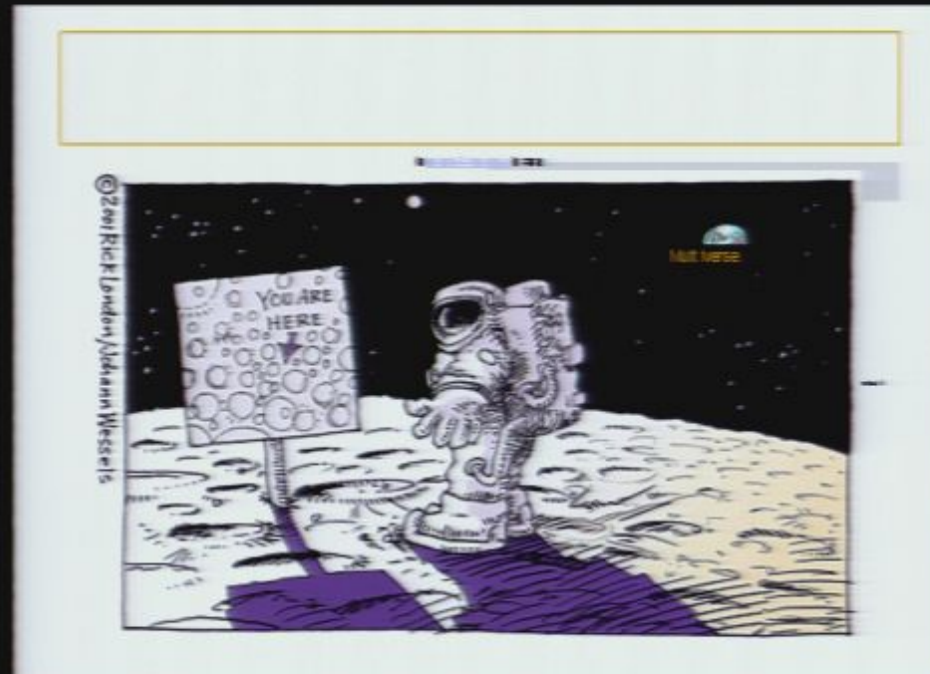

# Hierarchy: Dynamics+ Quantum Mechanics

# Contemplating Observational Imprints

?

# Selection Of Our Initial Patch: Why Pick One with Such an Extraordinarily Low Entropy?

## EXAMPLE : String Theory

- Non-Equilibrium: "Super Selection"

'SURVIVOR'  
=Expand

**Take the Landscape as  
the Theory of the Initial  
Conditions**

'TERMINAL'  
=Collapse

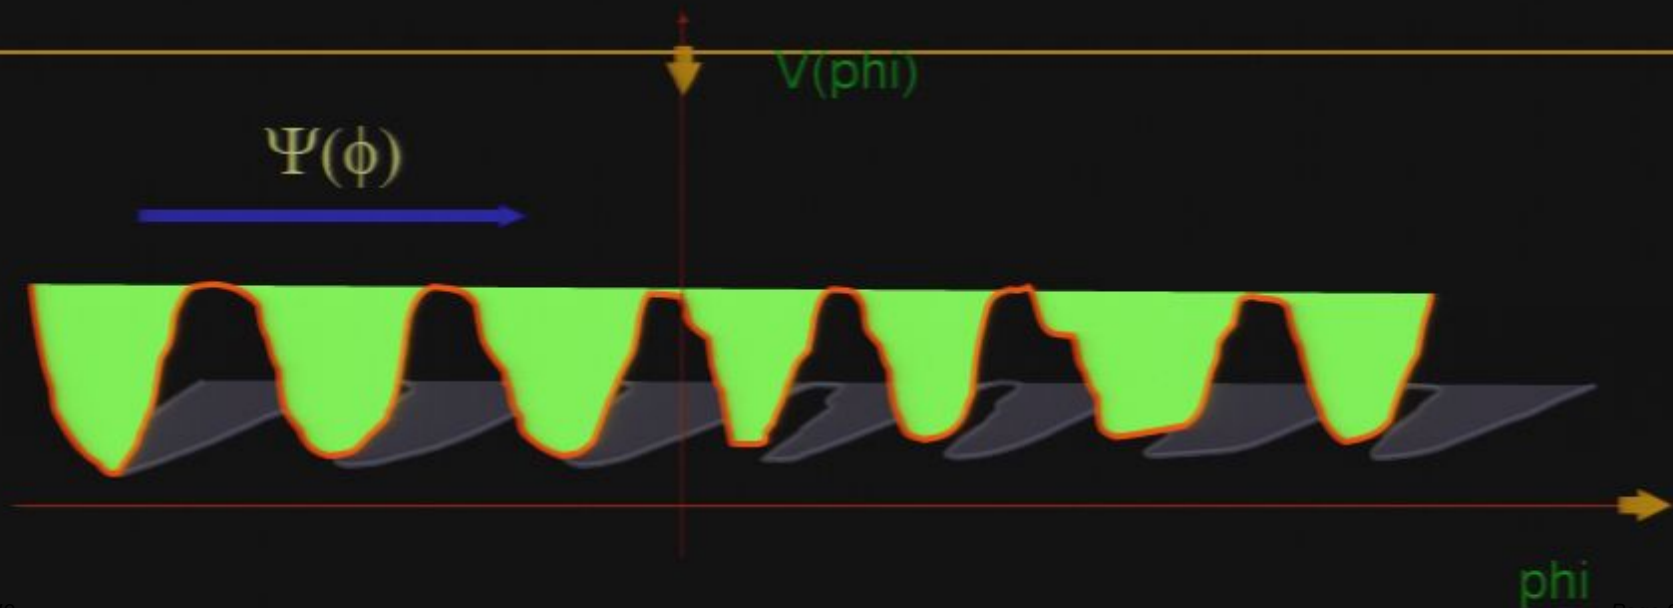

**Dynamics of gravity  
versus matter determines  
the superselection rule.**

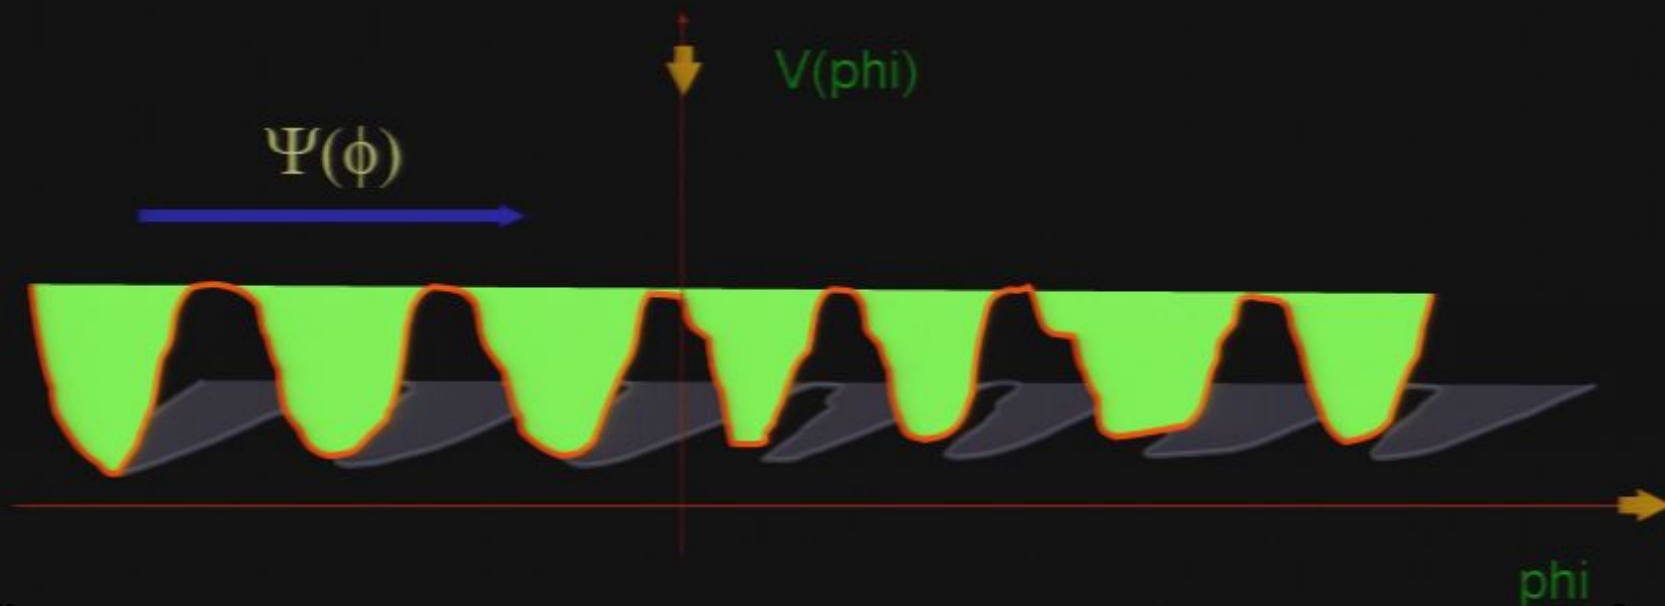

# The Universe on the Landscape

## Multiverse

# The Universe on the Landscape Multiverse

# The Universe on the Landscape Multiverse

- **LANDSCAPE**: Each vacua can potentially host a universe. Include decoherence among solutions.

# The Universe on the Landscape Multiverse

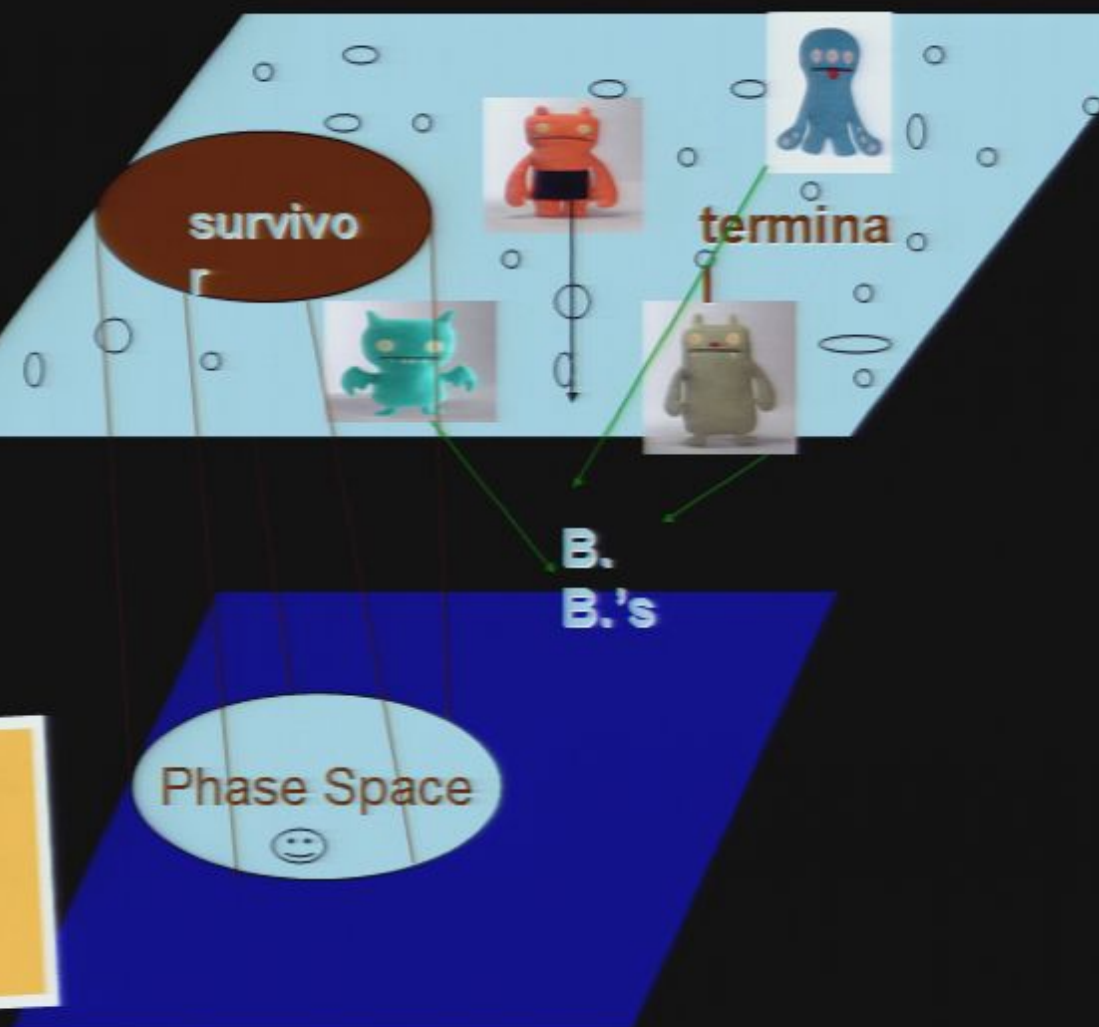

- **LANDSCAPE:** Each vacua can potentially host a universe. Include decoherence among solutions.
- **WaveFn. Of Universe:** Quantum Mechanics – not Quantum Cosmology !

# What Happens to Phase Space

Dynamically Cleansed  
Out of Low Energy  
Inflationary Patches  
From Gravitational  
Instabilities!

“Survivor and Terminal”  
Universes!

$S = \text{Log}[V]$  : Dynamically Reduced  
“Special” I. C. == Out-of-Equilibrium  
Universe is Not Ergodic.

# A Radical Proposal But Does it Make Predictions that can be Tested?

**Yes, Mixing Remains by Unitarity !!**

**An Entangled State Can Not Evolve into a Pure State**

# A Radical Proposal But Does it Make Predictions that can be Tested?

**Yes, Mixing Remains by Unitarity !!**

**An Entangled State Can Not Evolve into a Pure State**

- Nonlocal Entanglement Imprinted in CMB, LSS, VOIDS.

# A Radical Proposal But Does it Make Predictions that can be Tested?

**Yes, Mixing Remains by Unitarity !!**

**An Entangled State Can Not Evolve into a Pure State**

**Nonlocal Entanglement Imprinted in CMB, LSS, VOIDS.**

# A Radical Proposal But Does it Make Predictions that can be Tested?

**Yes, Mixing Remains by Unitarity !!**

**An Entangled State Can Not Evolve into a Pure State**

- **Nonlocal Entanglement Imprinted in CMB, LSS, VOIDS.**
- 2. **Bounds on  $M_{\text{susy}}$  as local fundamental scale to be tested by LHC.**

# Astrophysical Tests:

## Entanglement Imprints on Friedman Equation

$$H^2 = \frac{1}{3M_{\text{P}}^2} \left[ V(\phi) + \frac{1}{2} \left( \frac{V(\phi)}{3M_{\text{P}}^2} \right)^2 F(b, V) \right] \equiv \frac{V_{\text{eff}}}{3M_{\text{P}}^2} \quad (4.2)$$

where

$$F(b, V) = \frac{3}{2} \left( 2 + \frac{m^2 M_{\text{P}}^2}{V} \right) \log \left( \frac{b^2 M_{\text{P}}^2}{V} \right) - \frac{1}{2} \left( 1 + \frac{m^2}{b^2} \right) \exp \left( -3 \frac{b^2 M_{\text{P}}^2}{V} \right). \quad (4.3)$$

## Constrain SUSY Scale from Flatness and CMB Conditions

$$\begin{aligned} (\nabla T/T)_{\text{quad}} &\approx r_H^2 \nabla^2 \delta\phi \\ &= (ck_1/H_0)^2 \delta\phi \approx 0.5 (r_H/L_1)^2 (\delta\rho/\rho)_1. \end{aligned}$$

$$\Delta V / (\Delta\phi)^4 \leq O(10^{-7})$$

$$10^{-10} M_{\text{P}} < b < 10^{-8} M_{\text{P}}$$

# Modified Newtonian Potential.

Void Predicted at  $z < 1$  with size  $\sim 200 \text{ Mpc}$  Observed:  $\Sigma_8$  predicted  $< 1$ , in agreement w. WMAP.

$$\Phi = \Phi^0 + \delta\Phi \simeq \Phi^0 \left[ 1 + \frac{f(b, V)}{\rho} \left( \frac{r}{L_1(k, b)} \right)^2 \right].$$

**CMB: Running  $n_s$ . Suppressed  $\sigma_8$ .**

**LSS: Power Enhanced at Cluster Scales.**

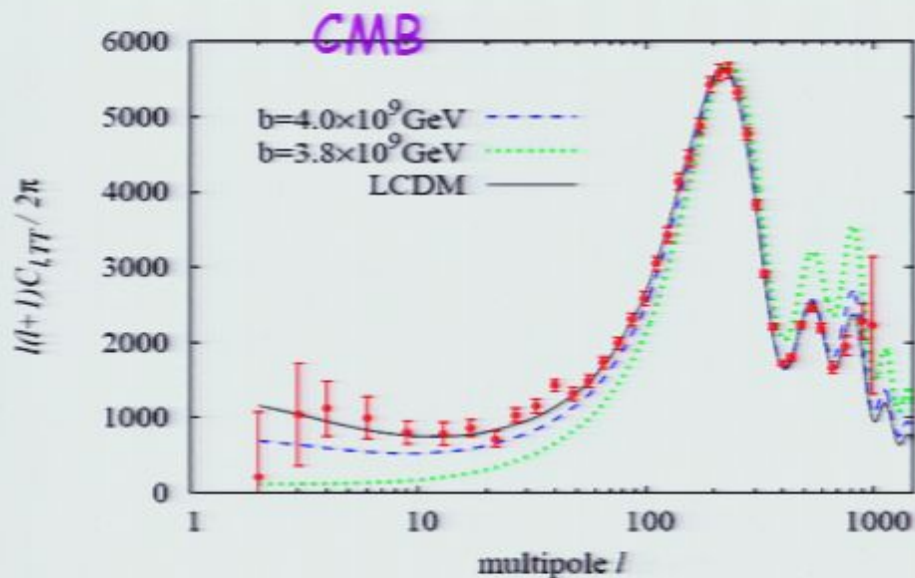

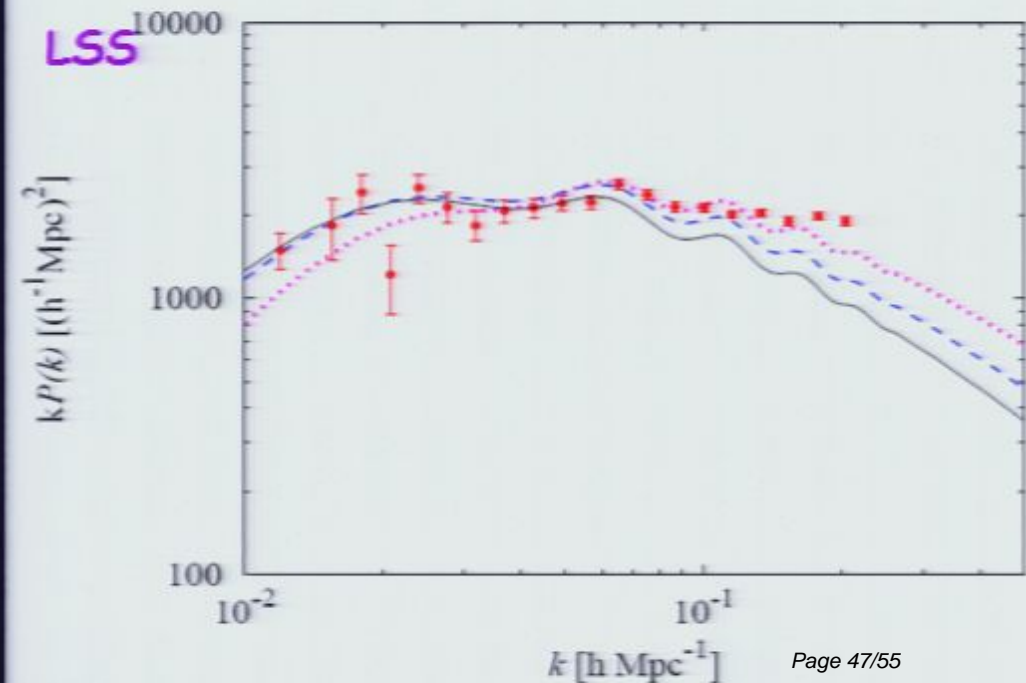

FIG. 1. CMB TT power spectra for the cases with  $b = 4.0 \times 10^9 \text{ GeV}$  (dash-line) and  $3.8 \times 10^9 \text{ GeV}$  (dot-line). For reference, the spectrum for the  $\Lambda\text{CDM}$  case (solid-line) and the data from WMAP3 are also

# Ontology of Multiverse

- **But so many types of Multiverse already. Only one can correspond to physical reality. Have we just shifted the trouble of I.C. to Multiverse selection?**
- Propose 2 principles to identify the Multiverse:
  - 1) **No 'Perpetual Motion' on Multiverse. (TIME)**
  - 2) **'Domains Correlation' on Multiverse.(SPACE)**

*These principles ensure one background spacetime for the Multiverse.*

- **Who would have thought that Nature would lead us to a situation where a deeper understanding of its mysteries, at the smallest and largest scales, would guide the extension of our physical theories to the realm of the Multiverse ?**

- What is the Multiverse?
- How do we know the Multiverse exists?
- Why do we think the Multiverse exists?
- A History Overview of Theories
- How do we know the Multiverse exists?
- Why do we think the Multiverse exists?
