

Title: Condensed Matter Review - Lecture 1

Date: Jan 03, 2011 10:15 AM

URL: <http://pirsa.org/11010019>

Abstract:

Course Plan

Week 1 — Normal Metals — Fermi Liquid

Week 2 — Conventional (BCS) Superconductors

Week 3 — Unconventional Metals + S. C. 's

Week 1

1.) Intro

2.) Noninteracting El

3.) Motion in a Periodic Potential

4.)

Week 1

1.) Intro

2.) Noninteracting El

3.) Motion in a Periodic Potential

4.) Energy Bands

NFE

Tight-Binding

Fermi Surfaces

Week 1

1.) Intro

2.) Noninteracting El

3.) Motion in a Periodic Potential

4.) Energy Bands

NFE

Tight-Binding

Fermi Surfaces

5.) Hartree-Fock for Fermions

6.) Landau's Fermi Liquid Theory

Basic Hamiltonian

$$\mathcal{H} = - \sum_j \frac{\hbar^2}{2m} \nabla_j^2 + \sum_\alpha \frac{\hbar^2}{2M_\alpha} \nabla_\alpha^2$$

$$- \sum_{j,d} \frac{z_d e^2}{r_{jd}}$$

Basic Hamiltonian

$$\begin{aligned}
 \mathcal{H} = & - \sum_j \frac{\hbar^2}{2m} \nabla_j^2 + \sum_{\alpha} \frac{\hbar^2}{2M_{\alpha}} \nabla_{\alpha}^2 \\
 & - \sum_{j, \alpha} \frac{z_{\alpha} e^2}{|\vec{R}_{\alpha} - \vec{r}_j|} + \sum_{j < k} \frac{e^2}{|\vec{r}_j - \vec{r}_k|} + \sum_{\alpha \beta} \frac{z_{\alpha} z_{\beta} e^2}{|\vec{R}_{\alpha} - \vec{R}_{\beta}|}
 \end{aligned}$$

el.
nuclei

el-nuc
el-el

Basic Hamiltonian

$$\begin{aligned}
 \mathcal{H} = & - \sum_j \frac{\hbar^2}{2m} \nabla_j^2 \quad \text{el.} \quad - \sum_\alpha \frac{\hbar^2}{2M_\alpha} \nabla_\alpha^2 \quad \text{nuclei} \\
 & - \sum_{j, \alpha} \frac{z_\alpha e^2}{|\mathbf{R}_\alpha - \mathbf{r}_j|} \quad \text{el-nuc} \quad + \sum_{j < k} \frac{e^2}{|\mathbf{r}_j - \mathbf{r}_k|} \quad \text{el-el} \quad + \sum_{\alpha < \beta} \frac{z_\alpha z_\beta e^2}{|\mathbf{R}_\alpha - \mathbf{R}_\beta|} \quad \text{nuc}
 \end{aligned}$$

Basic Hamiltonian

$$\begin{aligned}
 \mathcal{H} = & - \sum_j \frac{\hbar^2}{2m} \nabla_j^2 \quad \text{el.} \\
 & - \sum_\alpha \frac{\hbar^2}{2M_\alpha} \nabla_\alpha^2 \quad \text{nuclei} \\
 & - \sum_{j, \alpha} \frac{z_\alpha e^2}{|\mathbf{R}_\alpha - \mathbf{r}_j|} \quad \text{el-nuc} \\
 & + \sum_{j < k} \frac{e^2}{|\mathbf{r}_j - \mathbf{r}_k|} \quad \text{el-el} \\
 & + \sum_{\alpha < \beta} \frac{z_\alpha z_\beta e^2}{|\mathbf{R}_\alpha - \mathbf{R}_\beta|} \quad \text{nuc-nuc}
 \end{aligned}$$

$$\frac{m}{M_\alpha} \ll 1 \quad \sum_j = \sum_\alpha z_\alpha$$

Basic Hamiltonian ^{molec}

$$\mathcal{H} = - \sum_{\vec{r}} \frac{\hbar^2}{2m} \nabla^2 - \sum_{\alpha} \frac{\hbar^2}{2M_{\alpha}} \nabla_{\alpha}^2$$

$$- \sum_{j, \alpha} \frac{z_j e^2}{|R_{\alpha} - r_j|} + \sum_{j < k} \frac{z_j z_k e^2}{|R_j - R_k|} + \sum_{\alpha, \beta} \frac{z_{\alpha} z_{\beta} e^2}{|R_{\alpha} - R_{\beta}|}$$

$$\frac{m}{M_{\alpha}} \ll 1 \quad \sum_j = \sum_{\alpha}$$

Week 1

- 1.) Intro
- 2.) Noninteracting El
- 3.) Motion in a Periodic Potential
- 4.) Energy Bands
NFE
Tight-Binding
Fermi Surfaces
5. Hartree-Fock for Fermions
6. Landau's Fermi Liquid Theory
7. Transport

Basic Hamiltonian

$$\mathcal{H} = - \sum_{\vec{r}} \frac{\hbar^2}{2m} \nabla^2 - \sum_{\alpha} \frac{\hbar^2}{2M_{\alpha}} \nabla_{\alpha}^2$$

$$- \sum_{j, \alpha} \frac{z_{\alpha} e^2}{|\vec{r}_j - \vec{r}_{\alpha}|} + \sum_{j < k} \frac{z_j z_k e^2}{|\vec{r}_j - \vec{r}_k|} + \sum_{\alpha, \beta} \frac{z_{\alpha} z_{\beta} e^2}{|\vec{R}_{\alpha} - \vec{R}_{\beta}|}$$

$$\frac{\hbar}{M_{\alpha}} \ll 1 \quad \sum_j = \sum_{\alpha}$$

Week 1

- 1.) Intro
- 2.) Noninteracting El
- 3.) Motion in a Periodic Potential
- 4.) Energy Bands
NFE
Tight-Binding
Fermi Surfaces
5. Hartree-Fock for Fermions
6. Landau's Fermi Liquid Theory
7. Transport

Basic Hamiltonian

$$\begin{aligned}
 \mathcal{H} = & - \sum_{\substack{\text{el.} \\ j}} \frac{\hbar^2}{2m} \nabla_j^2 - \sum_{\substack{\text{nuclei} \\ \alpha}} \frac{\hbar^2}{2M_\alpha} \nabla_\alpha^2 \\
 & - \sum_{\substack{\text{el-nuc} \\ j, \alpha}} \frac{z_\alpha e^2}{|R_\alpha - r_j|} + \sum_{\substack{\text{el-el} \\ j < k}} \frac{e^2}{|r_j - r_k|} + \sum_{\substack{\text{nuc} \\ \alpha < \beta}} \frac{z_\alpha z_\beta e^2}{|R_\alpha - R_\beta|}
 \end{aligned}$$

$$\frac{m}{M_\alpha} \ll 1 \quad \sum_j = \sum_\alpha z_\alpha$$

Strongly Interacting
Many-Body Problem

Simplifications

1.) Ions

2.) Phases

Simplifications

1.) Ions

2.) Phases of matter

Solid - liquid - gas

Simplifications

1.) Ions

2.) Phases of Matter

Solid - liquid - gas

Metals - insulators (Semiconductors)

Superconductors

6.

Simplifications

1.) Ions

2.) Phases of Matter

Solid - liquid - gas

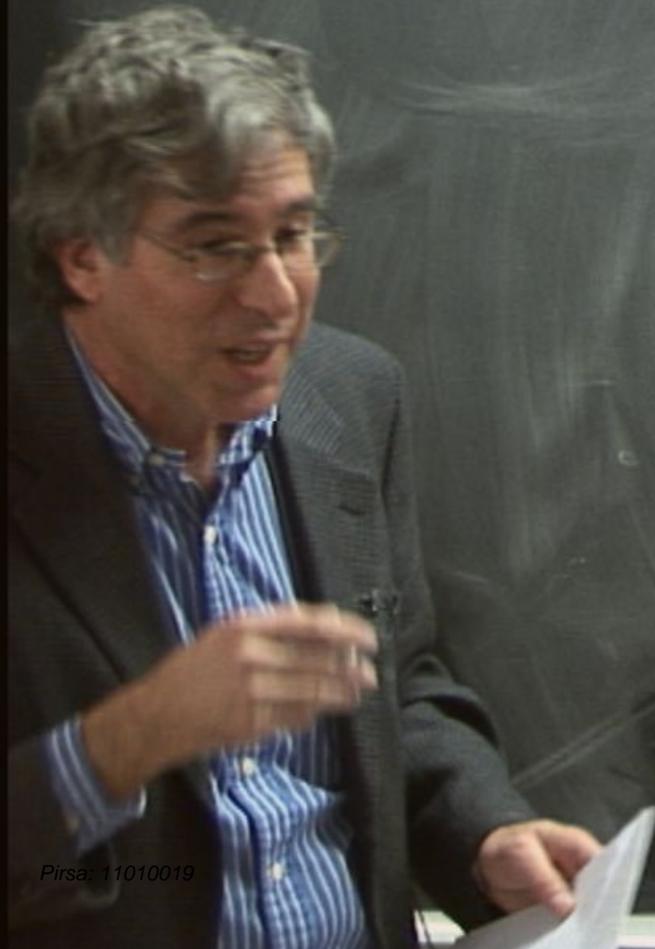

Metals - insulators (Semiconductors)

Superconductors

(anti)ferromagnets

6.

$$\rho = \frac{e^{-\beta H}}{\text{Tr} e^{-\beta H}} \quad \beta = \frac{1}{k_B T}$$

Thermodynamic Averages

$$\langle A \rangle_T = \text{Tr}(\rho A)$$

Thermodynamic Averages

$$\langle A \rangle_T = \text{Tr}(\rho A)$$

$$\text{Entropy} = -\text{Tr} \rho \ln \rho$$

Thermodynamic Averages

$$\langle A \rangle_T = \text{Tr}(\rho A)$$

$$\text{Entropy} = -\text{Tr}(\rho \ln \rho)$$

$$\text{Free Energy } F = E - TS$$

$$\text{Internal Energy } E = \langle H \rangle$$

Thermodynamic Averages

$$\langle A \rangle_T = \text{Tr}(\rho A)$$

$$\text{Entropy} = -\text{Tr}(\rho \ln \rho)$$

$$\text{Free Energy } F = E - TS \quad \text{Helmholtz}$$

$$\text{Internal Energy } E = \langle H \rangle$$

$$\text{Partition Function } Z = \text{Tr} e^{-\beta H}$$

$$F = -T \ln Z \quad \left[\text{Show from} \right. \\ \left. \text{defs of } S, P, E \right]$$

$$= F(T, V, N)$$

$$F = -T \ln Z \quad \left[\text{Show from} \right. \\ \left. \text{defs of } S, P, E \right]$$

$$= F(T, V, N)$$

allows calc of thermal props

$$S = - \left. \frac{\partial F}{\partial T} \right)_{V, N}$$

$$P = - \left. \frac{\partial F}{\partial V} \right)_{T, N}$$

$$\mu = - \left. \frac{\partial F}{\partial N} \right)_{T, V}$$

$$F = -T \ln Z \quad \left[\begin{array}{l} \text{Show from} \\ \text{defs of } S, P, E \end{array} \right]$$

$$= F(T, V, N)$$

allows calc of thermal props

$$S = - \left(\frac{\partial F}{\partial T} \right)_{V, N} \quad P = - \left(\frac{\partial F}{\partial V} \right)_{T, N} \quad \mu = - \left(\frac{\partial F}{\partial N} \right)_{T, V}$$

$$C_V = T \left(\frac{\partial^2 S}{\partial T^2} \right)_{V, N} \quad \text{2nd deriv of } F$$

$$F = -T \ln Z \quad \left[\begin{array}{l} \text{Show from} \\ \text{defs of } S, P, E \end{array} \right]$$

$$= F(T, V, N)$$

allows calc of thermal props

$$S = - \left(\frac{\partial F}{\partial T} \right)_{V, N} \quad P = - \left(\frac{\partial F}{\partial V} \right)_{T, N} \quad \mu = - \left(\frac{\partial F}{\partial N} \right)_{T, V}$$

$$C_V = T \left(\frac{dS}{dT} \right)_{V, N} \quad \text{2nd deriv of } F$$

Similarly $\Omega(T, V, \mu)$

$$F = -T \ln Z \quad \left\{ \begin{array}{l} \text{Show from} \\ \text{def of } S, P, E \end{array} \right.$$

$$= F(T, V, N)$$

allows calc of thermal props

$$S = - \left. \frac{\partial F}{\partial T} \right|_{V, N} \quad P = - \left. \frac{\partial F}{\partial V} \right|_{T, N} \quad \mu = - \left. \frac{\partial F}{\partial N} \right|_{T, V}$$

$$C_V = T \left. \frac{\partial S}{\partial T} \right|_{V, N} \quad \text{2nd deriv of } F$$

Similarly $\Omega(T, V, \mu)$

Variational Principle
Consider $\mathcal{F}(p)$

$$F = -T \ln Z \quad \left[\begin{array}{l} \text{Show form} \\ \text{dep. of } S, P, E \end{array} \right]$$

$$= F(T, V, N)$$

allows calc of thermal props

$$S = - \left(\frac{\partial F}{\partial T} \right)_{V, N} \quad P = - \left(\frac{\partial F}{\partial V} \right)_{T, N} \quad \mu = - \left(\frac{\partial F}{\partial N} \right)_{T, V}$$

$$C_V = T \left(\frac{\partial S}{\partial T} \right)_{V, N} \quad \text{2nd deriv of } F$$

Similarly $\Omega(T, V, \mu)$

Variational Principle
Consider $\mathcal{F}(p) \equiv \text{Tr}(pH) - T \text{Tr}(p \ln p)$

Variational Principle

Consider $\tilde{f}(p) \equiv \text{Tr}(pH) - T \text{Tr}(p \ln p)$

Variational Principle

Consider $\tilde{\xi}(p) \equiv \text{Tr}(pH) - T \text{Tr}(p \ln p)$

Arbitrary
Prob Fn

$$\min_p [\tilde{\xi}(p)] = F$$

Variational Principle

Consider $\tilde{\mathcal{F}}(\rho) \equiv \text{Tr}(\rho H) - T \text{Tr}(\rho \ln \rho)$

Arbitrary
Prob Fn

$$\text{Min}_{\rho} [\tilde{\mathcal{F}}(\rho)] = \tilde{\mathcal{F}}(\rho) = F$$

$$\text{where } \rho = \frac{e^{-\beta H}}{Z}$$

$$\left. \frac{\partial F}{\partial N} \right|_{T, V}$$

Variational Principle

Consider $\tilde{f}(p) \equiv \text{Tr}(pH) - T \text{Tr}(p \ln p)$

Arbitrary
Prob Fn

$$\text{Min}_p [\tilde{f}(p)] = \tilde{f}(p) = F$$

where $p = \frac{e^{-\beta H}}{Z}$

A general way of writing p is

$$p = \frac{e^{-\beta H_v}}{Z_v} \quad Z_v = \text{Tr} e^{-\beta H_v}$$

Variational Principle

Consider $\tilde{f}(p) \equiv \text{Tr}(pH) - T \text{Tr}(p \ln p)$

Arbitrary
Prob Fn

$$\text{Min}_p [\tilde{f}(p)] = \tilde{f}(p) = F$$

$$\text{where } p = \frac{e^{-\beta H}}{Z}$$

A general way of writing p is

$$p = \frac{e^{-\beta H_V}}{Z_V} \quad Z_V = \text{Tr} e^{-\beta H_V}$$

H_V is "Variational Hamiltonian"

H_V is "Variational Hamiltonian"

- H_V is most useful if exactly Solvable
- Typically H is not

H_V is "Variational Hamiltonian"

- H_V is most useful if exactly Solvable
- Typically H is not
- Can (should) contain variational parameter

H_V is "Variational Hamiltonian"

- H_V is most useful if exactly Solvable

- Typically H is not

- Can (should) contain variational parameter

- Call H_V a "fake" Hamiltonian

H_V is "Variational Hamiltonian"

- H_V is most useful if exactly Solvable

- Typically H is not

- Can (should) contain variational parameter

- Call H_V a "fake" Hamiltonian

Special Case - Mean Field Theory

$$H_V = \sum_i H^{(i)}(\vec{r}_i, \vec{p}_i, S_i)$$

H_V is "Variational Hamiltonian"

- H_V is most useful if exactly Solvable

- Typically H is not

- Can (should) contain variational parameter

- Call H_V a "fake" Hamiltonian

Special Case - Mean Field Theory

$$H_V = \sum_i H^{(i)}(\bar{n}_i, \bar{p}_i, S_i)$$

Minimizing F_V \rightarrow Self-consistency Conditions
which determine mean fields

Minimizing $\Gamma_V \rightarrow$ Self-consistency Conditions
which determine mean fields

Works equally for
identical quantum particles

Minimizing $E_V \rightarrow$ Self-consistency conditions
which determine mean fields

Works equally for
identical quantum particles
where it is called Hartree-Fock

Will use for normal Fermi gas
and BCS S.C.

Minimizing $E_V \rightarrow$ Self-consistency Conditions
which determine mean fields

Works equally for
identical quantum particles
where it is called Hartree-Fock

Will use for normal Fermi gas
and BCS S.C.

Non-Interacting Electrons
