Abstract:

String theory is the generalization  
 where Length  $\rightarrow$  Area

$$D_F(x, y) = \sum_{\text{Paths from } x \text{ to } y} e^{-m \text{ Length}}$$

$$e^{-m \text{ Length}} = \int \sqrt{\dot{x}^2} dt$$

$$e^{-m \text{ Length}} = \int P e^{\int A_\mu \dot{x}^\mu dt}$$

$W[C] = \text{tr} P e^{\int_C A}$   
 is a gauge observable

String theory is the generalization  
 where Length  $\rightarrow$  Area

$$D_F(x, y) = \sum_{\text{Paths } x \text{ to } y} e^{-m \int ds} e^{i \int dt}$$

$W[E] = \text{tr} P e^{i \int A}$   
 is a gauge  
 observable

$\leftarrow \int W(y)$

$$\left\{ \begin{array}{l} 1 \\ e^{\int_{\text{area}} A_\mu(x(t)) \dot{x}^\mu dt} \\ P e^{\int_{\text{line}} A_\mu \dot{x}^\mu dt} \end{array} \right.$$

Wilson line

$$W(y, x)$$

$$W(x+\epsilon, x) = e^{i \int \epsilon \cdot A(x)}$$

String theory is the generalization  
 where Length  $\rightarrow$  Area

$$D_F(x,y) = \sum_{\text{Paths from } x \text{ to } y} e^{-m \text{ Length}}$$

$$= \int \frac{1}{\sqrt{X^2}} dt$$

$$= \int e^{\int A_\mu(x(t)) \dot{x}^\mu dt}$$

$$= \int P e^{\int A_\mu \dot{x}^\mu dt}$$

$W[C] = \text{tr} P e^{i \oint_C A}$   
 is a gauge observable

Wilson line  $W(y,x)$   
 Gauge field  $U(y)W(y,x)U^\dagger(x)$

$$W(x+\epsilon, x) = e^{i \epsilon \cdot A(x)}$$

String theory is the generalization  
 where Length  $\rightarrow$  Area

$$D_F(x,y) = \sum_{\text{Paths from } x \text{ to } y} e^{-m \text{ Length}}$$

$$= \int \sqrt{\dot{x}^2} dt$$

$$= \int e^{i \int A_\mu(x(t)) \dot{x}^\mu dt}$$

$$= P e^{\int A_\mu \dot{x}^\mu dt}$$

$W[E] = \text{tr} P e^{i \int E \cdot A}$   
 is a gauge observable

Wilson line  $W(y,x)$   
 Gauge field  $U(y)W(y,x)U^\dagger(x)$

$$W(x+\epsilon, x) = e^{i \epsilon \cdot A(x)}$$

String theory is the generalization  
 where Length  $\rightarrow$  Area

$$D_F(x, y) = \sum_{\text{Paths from } x \text{ to } y} e^{-m \text{ Length}}$$

$$e^{-m \int \sqrt{\dot{x}^2} dt}$$

$$e^{-\int A_\mu(x(t)) \dot{x}^\mu dt}$$

$$P e^{\int A_\mu \dot{x}^\mu dt}$$

$W[C] = \text{tr} P e^{i \oint_C A}$   
 is a gauge  
 observable

Wilson line  $W(y, x)$   
 Gauge field  $U(y, x)$

$$W(x+\epsilon, x) = e$$

String theory is the generalization  
 where Length  $\rightarrow$  Area

$$D_F(x,y) = \sum_{\text{Paths from } x \text{ to } y} e^{-m \text{ Length}}$$

$$= \int \sqrt{\dot{x}^2} dt$$

$$= \int e^{i \int A_\mu(x(t)) \dot{x}^\mu dt}$$

$$= P e^{\int A_\mu \dot{x}^\mu dt}$$

$W[E] = \text{tr} P e^{\int A}$   
 is a gauge  
 observable

Wilson line  $W(y,x)$   
 Gauge field  $U(y,x)$

$$W(x+\epsilon, x) = e^{i \epsilon \cdot A}$$

String theory is the generalization  
 where Length  $\rightarrow$  Area

$$D_F(x,y) = \sum_{\text{Paths from } x \text{ to } y} e^{-m \text{ Length}}$$

$$e^{-m \int \sqrt{\dot{x}^2} dt}$$

in  $D=4$ , we can/should use AdS/CFT!

in QED,

$$\langle W_e \rangle = \exp \left[ e^2 \int_{x(t)} \frac{\dot{x}(t_1) \cdot \dot{x}(t_2)}{|x(t_1) - x(t_2)|^2} dt_1 dt_2 \right]$$

$$= 1 + \text{loop} + \text{loop} + \dots$$

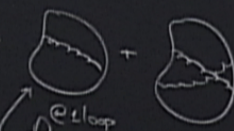

@loop for same or non abelian gauge theories.

Next

in QED,

$$\langle W_e \rangle = \exp \left[ e^2 \int_{x(t)} \dots \right] = \frac{e^2}{4\pi^2} \int dt_1 dt_2 \frac{\dot{x}(t_1) \cdot \dot{x}(t_2)}{|x(t_1) - x(t_2)|^2}$$

= 1 +  + ...  
@ loop for same or non abelian gauge theories.

Next

in QED,

$$\langle W_e \rangle = \exp \left[ e^2 \int_{x(t)} \dots \right] = \frac{e^2}{4\pi^2} \int dt_1 dt_2 \frac{\dot{x}(t_1) \cdot \dot{x}(t_2)}{|x(t_1) - x(t_2)|^2}$$

$$= 1 + \text{loop} + \dots$$

@ loop for same or non abelian gauge theories.

Next

in QED,

$$\langle W_e \rangle = \exp \left[ e^2 \int_{x(t_1)}^{x(t_2)} \frac{\dot{x}(t_1) \cdot \dot{x}(t_2)}{|x(t_1) - x(t_2)|^2} dt_1 dt_2 \right]$$

$$= 1 + \text{loop} + \text{two-loop} + \dots$$

@ 1 loop  
the same for non-abelian gauge theories.

DEF 3

$\equiv \psi(T)$ , where  $[D_t - G(t)]\psi(t) = 0$  with  $\psi(0) = 1$

in non-Abelian gauge theory

how to compute  $\langle W \rangle$  at large coupling,  $\lambda \gg 1$ ?

in  $D=4$ , we can/should use AdS/CFT!

$\langle W \rangle = e^{-\frac{\sqrt{\lambda}}{2\pi} \text{AREA}}$

DEF 3

$\equiv \psi(T)$ , where  $[D_t - G(t)]\psi(t) = 0$  with  $\psi(0) = \mathbb{1}$

in non-Abelian gauge theory

how to compute  $\langle W \rangle$  at large coupling,  $\lambda \gg 1$ ?

in  $D=4$  / should use AdS/CFT!

DEF 3

$$\equiv \psi(T), \text{ where } \left[ \partial_t - G(t) \right] \psi(t) = 0 \text{ with } \psi(0) = \mathbb{1}$$

in non-Abelian gauge theory

how to compute  $\langle W \rangle$  at large coupling,  $\lambda \gg 1$ ?

in  $D=4$ , we can/should use AdS/CFT!

DEF 3

$\equiv \psi(T)$ , where  $[\partial_t - G(t)]\psi(t) = 0$  with  $\psi(0) = 1$

in non-Abelian gauge theory

how to compute  $\langle W \rangle$  at large coupling,  $\lambda \gg 1$ ?

in  $D=4$ , we can/should use AdS/CFT!

DEF 3
