

Title: Rethinking Cosmology

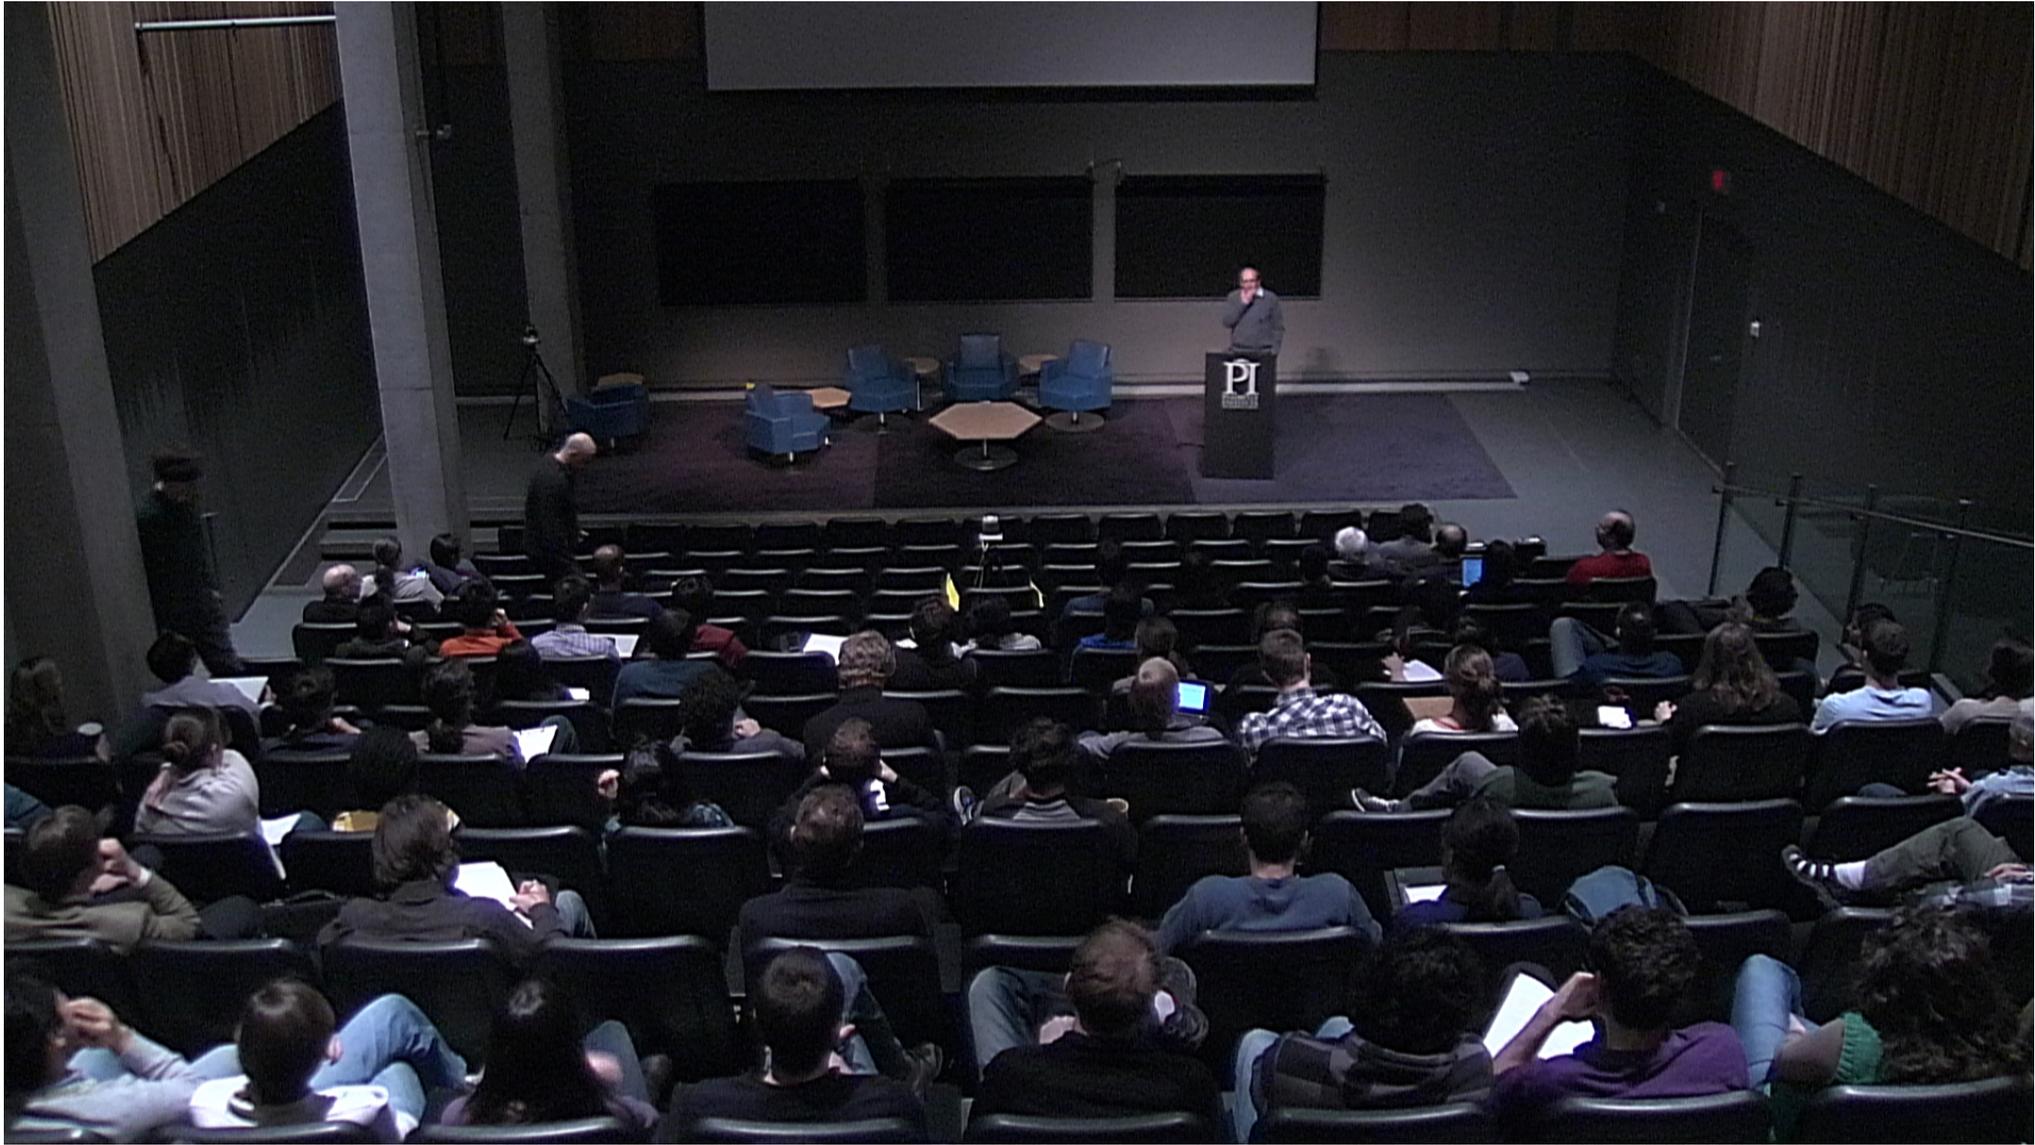

Date: Mar 06, 2013 02:00 PM

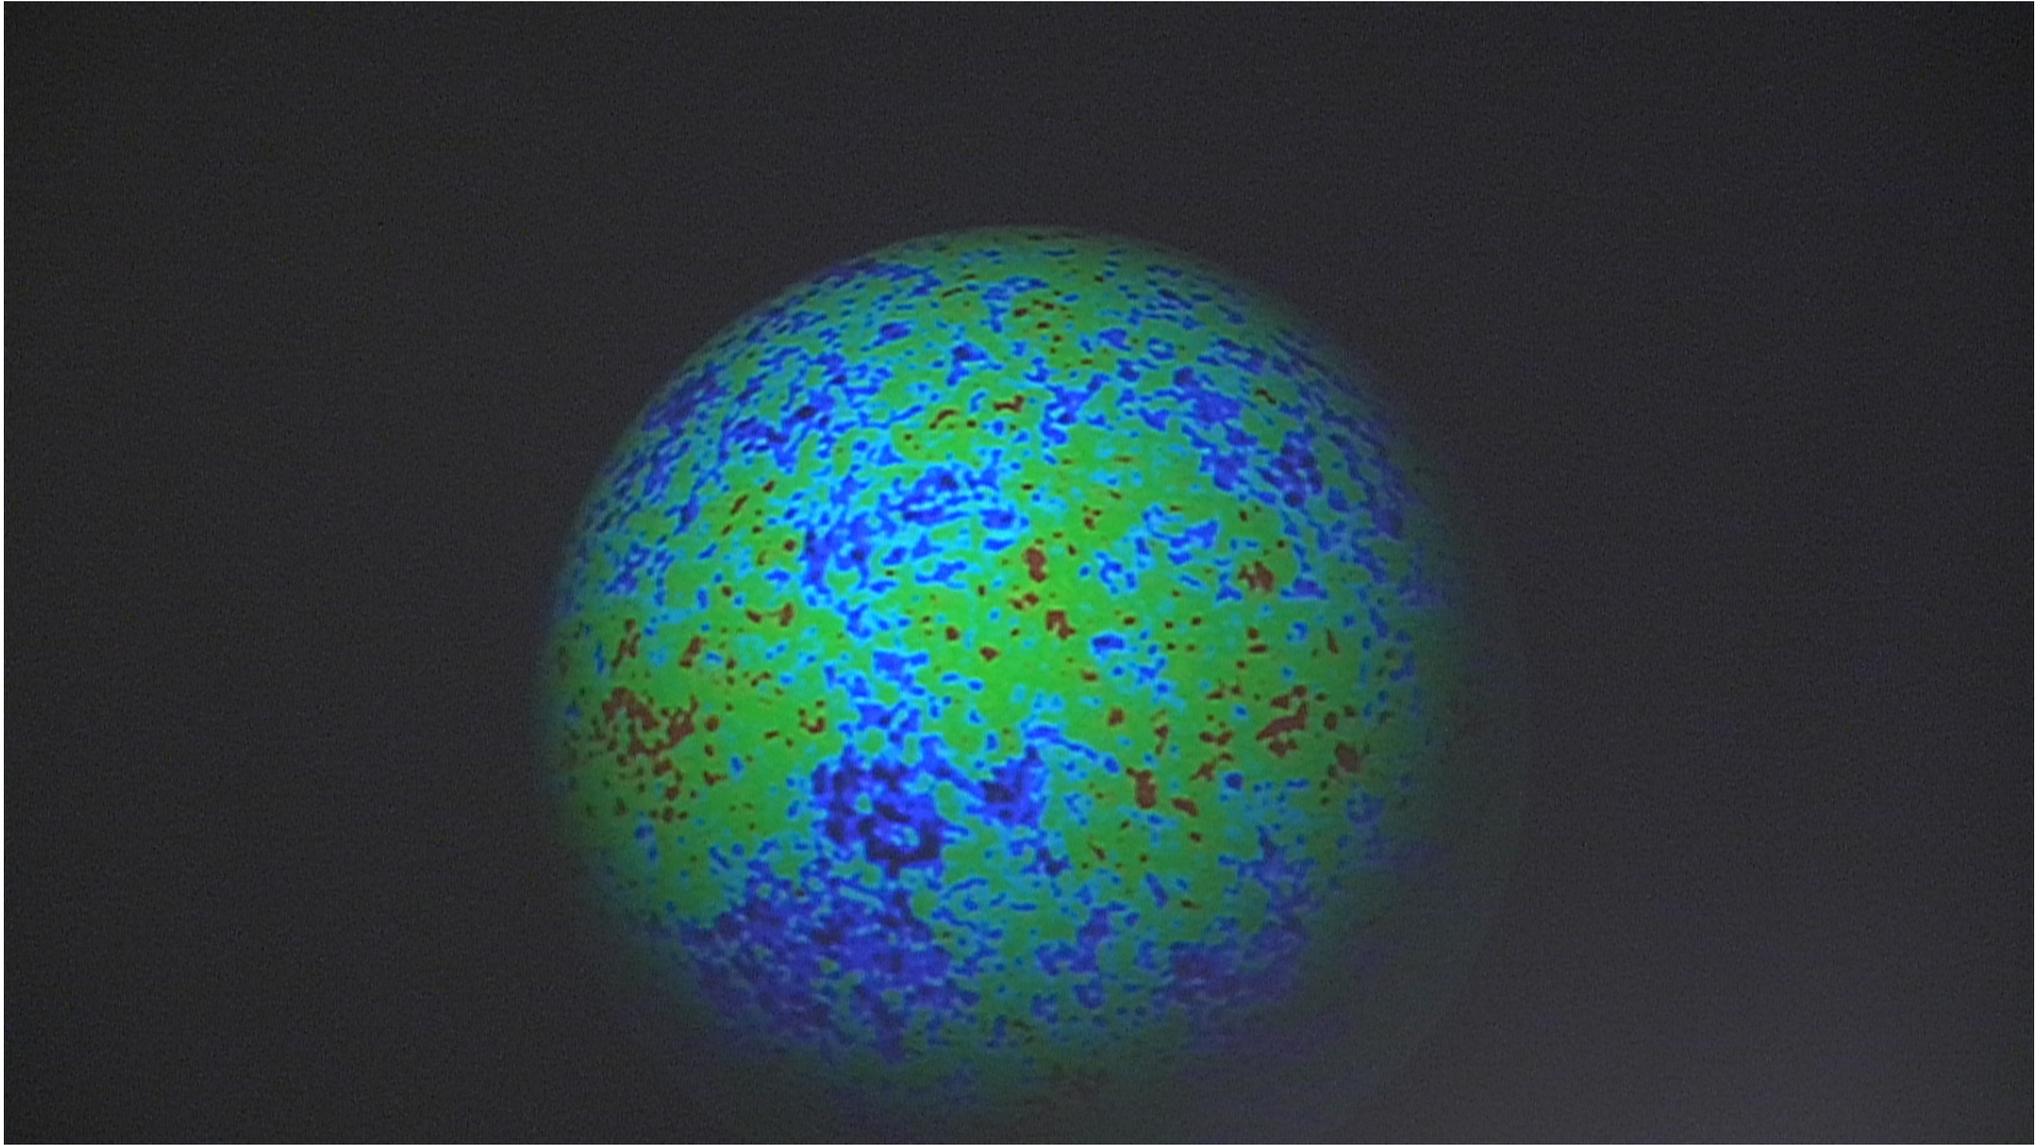

URL: <http://pirsa.org/13030079>

Abstract: This talk will begin by discussing one by one the various reasons why cosmologists today consider the big bang inflationary cosmology to be the leading, if not proven, theory of the universe and

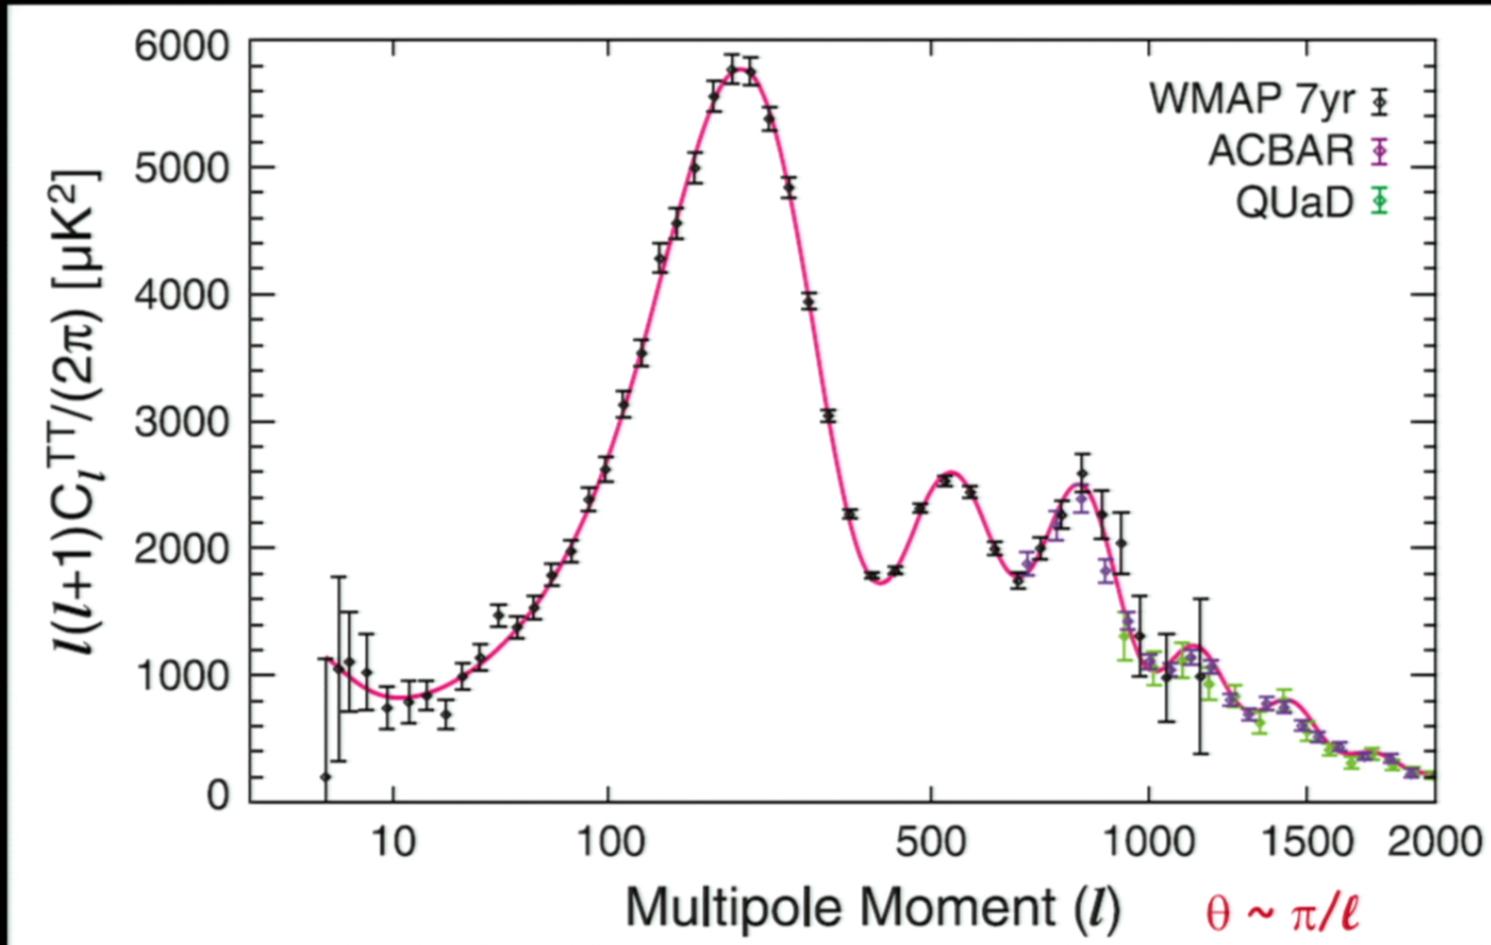

then explaining why each of these reasons is flawed. This leads

naturally to the question: what is the alternative? Understanding the flaws helps point the way.

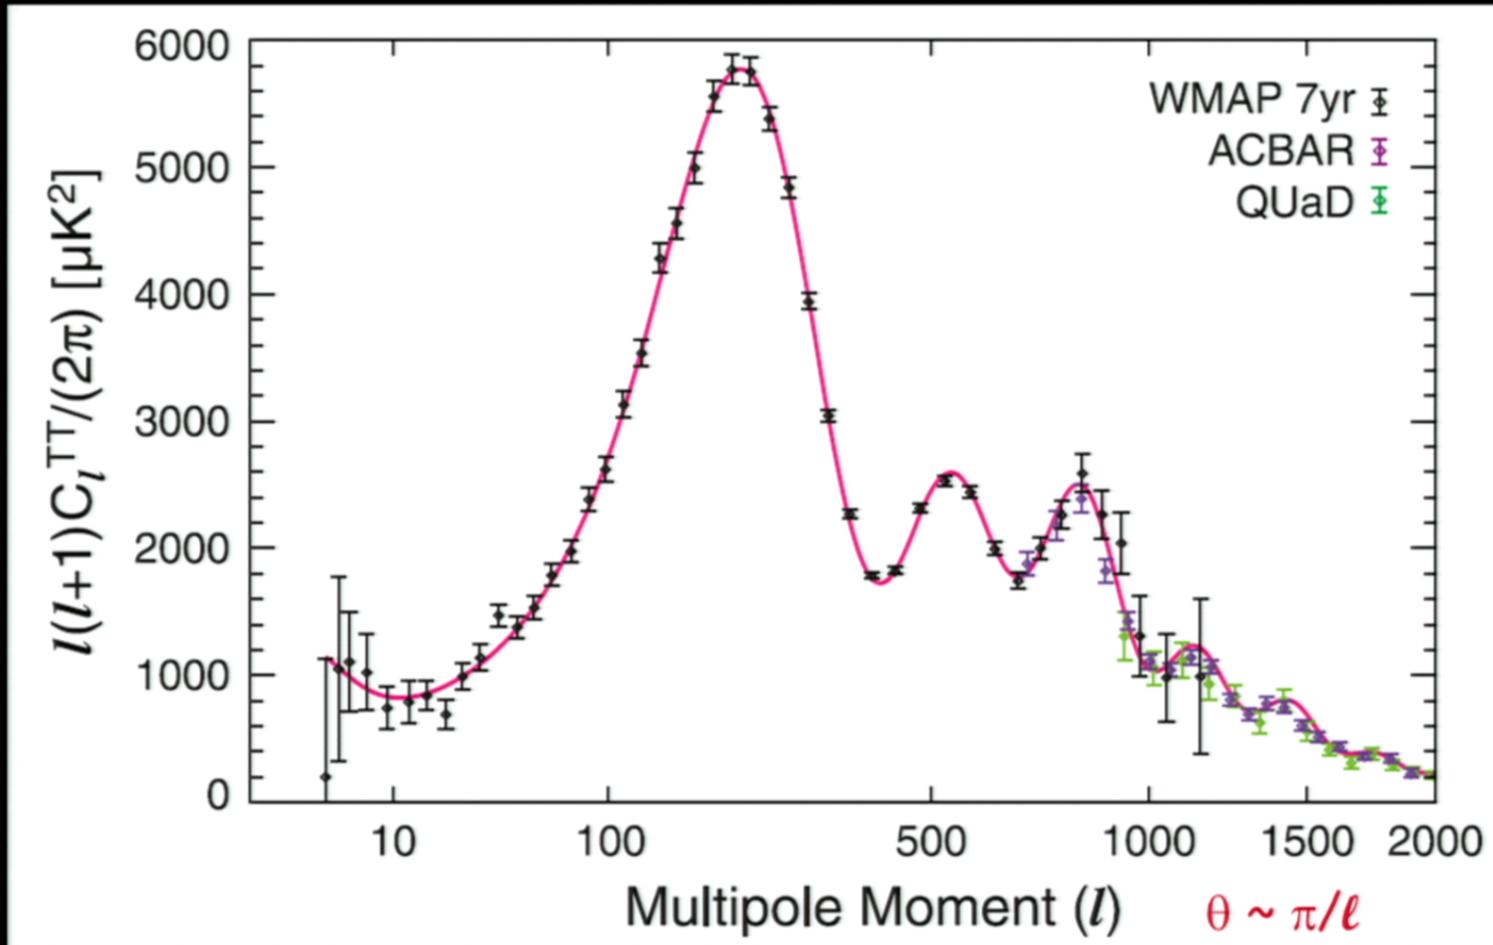

the age of precision cosmology

the age of precision cosmology

the big bang inflationary paradigm
has failed

The inflationary myth:

- inflation transforms an arbitrary chaotic initial state into an ordered (flat, smooth) final state
- inflation explains: homogeneity, isotropy, flatness & absence of monopoles
- inflation predicts: near scale invariance, tilt, gaussianity, adiabaticity, cosmic gravitational waves, consistency relations

The inflationary myth:

- ~~-- inflation transforms an arbitrary chaotic initial state into an ordered (flat, smooth) final state~~
- inflation explains: homogeneity, isotropy, flatness & absence of monopoles
- inflation predicts: near scale invariance, tilt, gaussianity, adiabaticity, cosmic gravitational waves, consistency relations

Penrose (1986)

$$S_{today} = 10^{100}$$

Penrose (1986)

$$S_{today} = 10^{100}$$

Penrose (1986)

$$S_{max} \sim 1/V > 10^{120} \quad S_{today} = 10^{100}$$

Penrose (1986)

$$S_{max} \sim 1/V > 10^{120} \quad S_{today} = 10^{100}$$

$$\# \text{ states} \sim \text{likelihood} \sim e^S$$

Penrose (1986)

$$S_{max} \sim 1/V > 10^{120} \quad S_{today} = 10^{100}$$

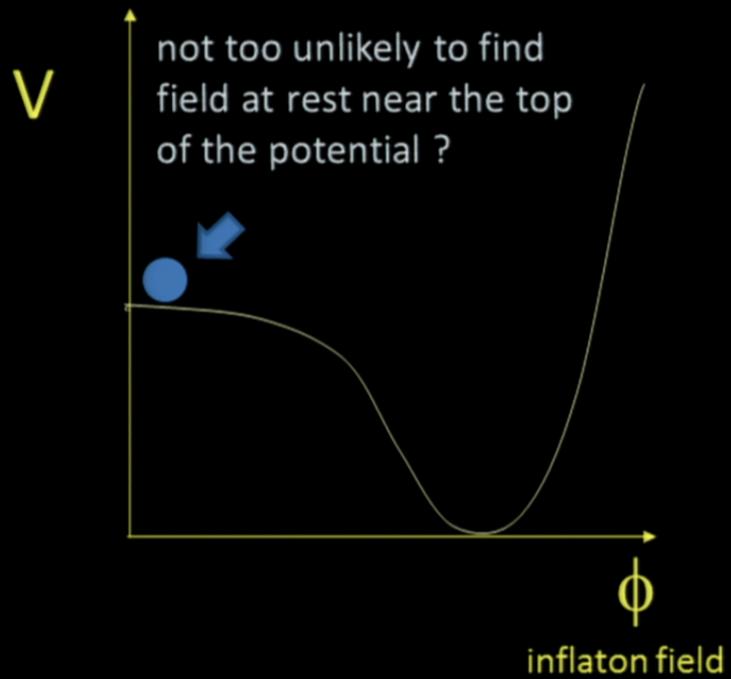

$$\# \text{ states} \sim \text{likelihood} \sim e^S$$

Penrose (1986)

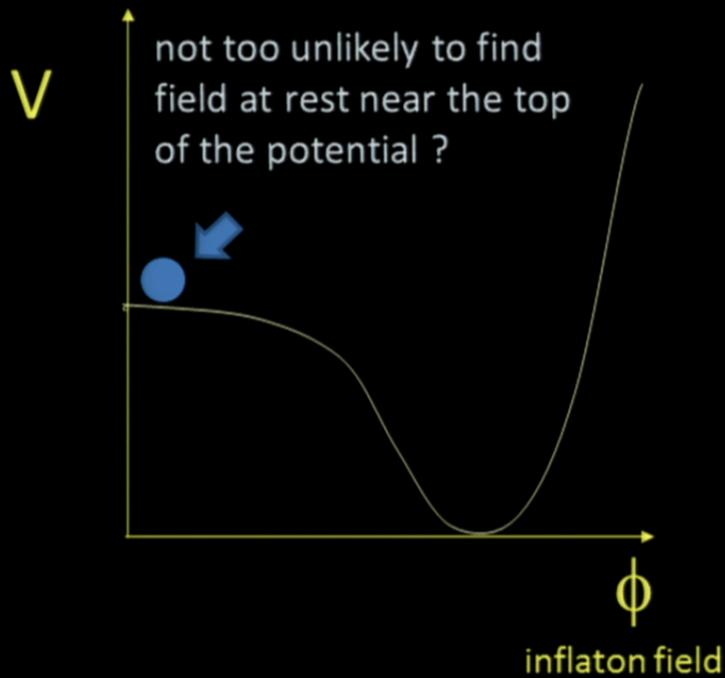

$$S_{max} \sim 1/V > 10^{120} \quad S_{today} = 10^{100} \quad S_{inflation} < 10^{20}$$

$$\# \text{ states} \sim \text{likelihood} \sim e^S$$

Chaotic initial conditions?

Chaotic initial conditions?

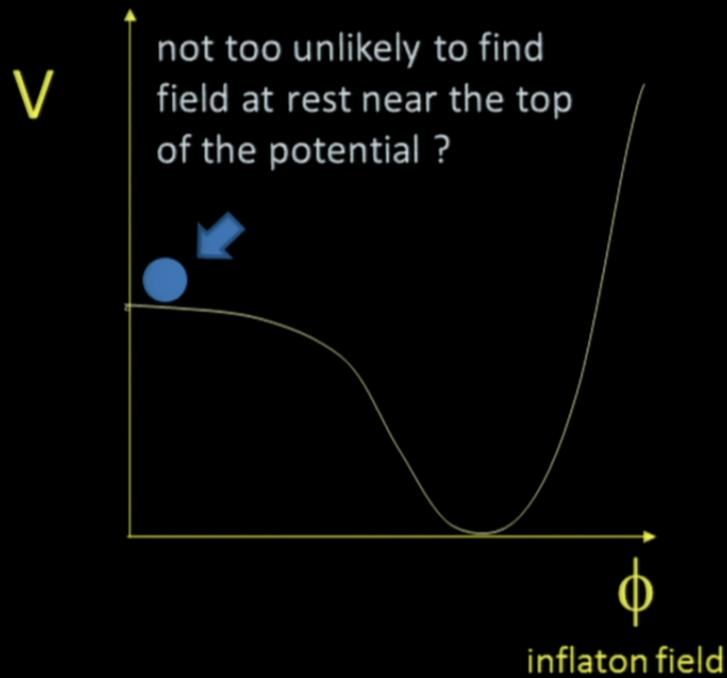

very unlikely to find the field at rest anywhere!!

$$KE \sim 1/a^6 \text{ as } a \rightarrow 0$$

PE \rightarrow constant

Chaotic initial conditions?

very unlikely to find the field at rest anywhere!!

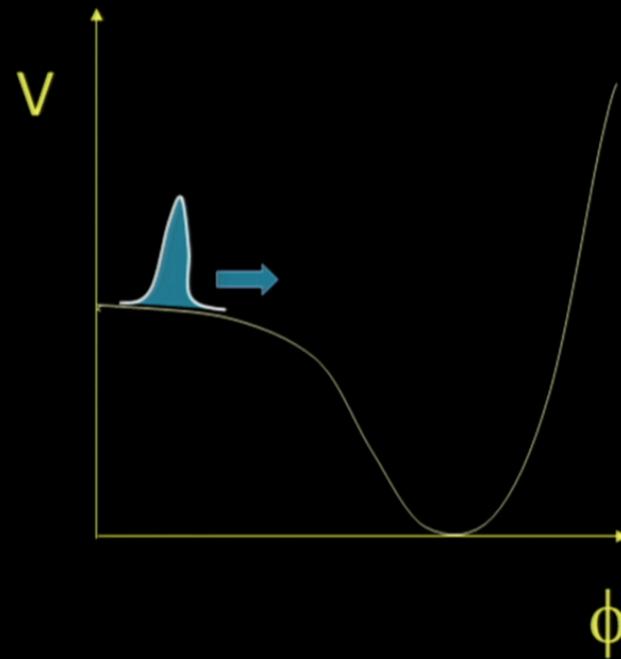

$$KE \sim 1/a^6 \text{ as } a \rightarrow 0$$

PE \rightarrow constant

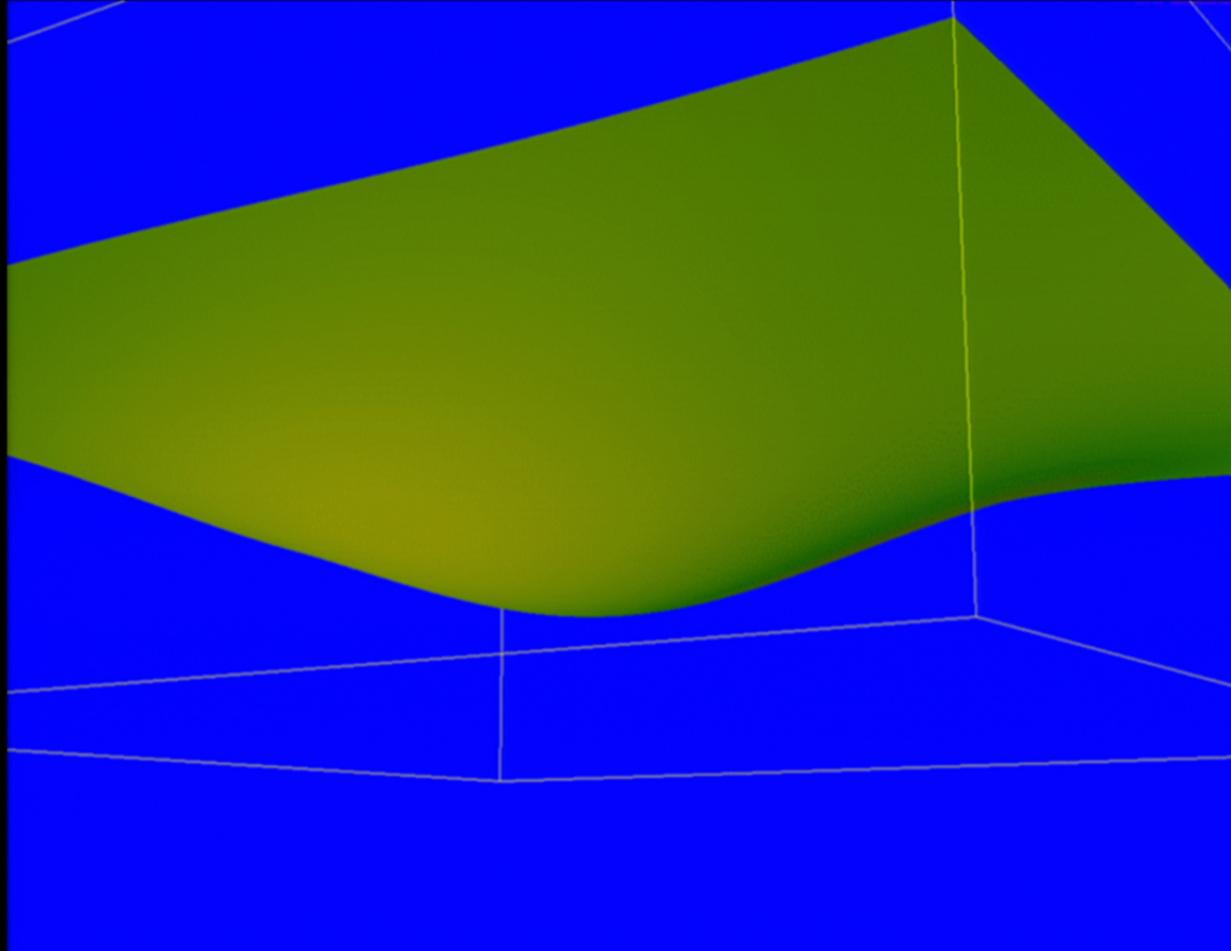

The inflationary myth:

- ~~-- inflation transforms an arbitrary chaotic initial state into an ordered (flat, smooth) final state~~
- inflation explains: homogeneity, isotropy, flatness & absence of monopoles
- inflation predicts: near scale invariance, tilt, gaussianity, adiabaticity, cosmic gravitational waves, consistency relations

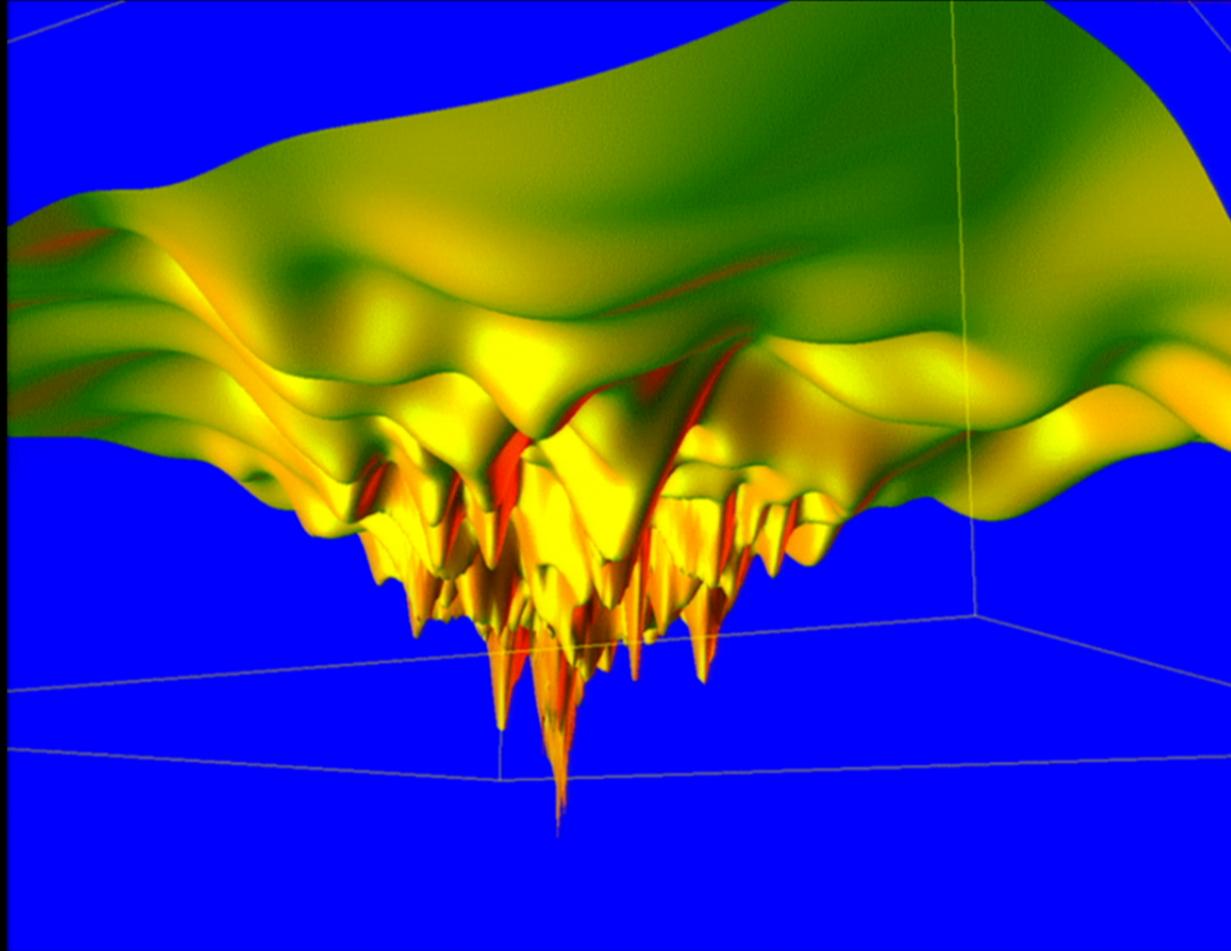

Eternal inflation

What inflation really predicts is

“anything that can happen will happen
--- and it will happen an infinite number of times”

What inflation really predicts is

“anything that can happen will happen
--- and it will happen an infinite number of times”

– unmitigated disaster:
maximally unpredictable theory

What inflation really predicts is

“anything that can happen will happen
--- and it will happen an infinite number of times”

- unmitigated disaster:
 maximally unpredictable theory
- any claims that CMB and large scale structure
 data support or prove inflation are misleading
 nor are there any future tests that can prove
 or disprove it

Measure? Anthropics?

– the Great Leap Backwards

Measure? Anthopics?

- the Great Leap Backwards
- now any “predictability” rests entirely on measure
- how to distinguish from other unproductive models?

Rethinking Cosmology

the universe emerges from the big bang
with the right conditions

the big bang is a big bounce

the big bang is a big bounce

no flatness or causal connectedness problem

the big bang is a big bounce

no flatness or causal connectedness problem

new mechanism for smoothing the universe prior to the bang

$$H^2 = \frac{8\pi G}{3} \frac{\rho_m^0}{a^3} + \frac{8\pi G}{3} \frac{\rho_r^0}{a^4} + \frac{\sigma^2}{a^6} + \dots - \frac{k}{a^2}$$

Khoury, Ovrut, PJS, Turok
Wesley, Erickson, PJS, Turok

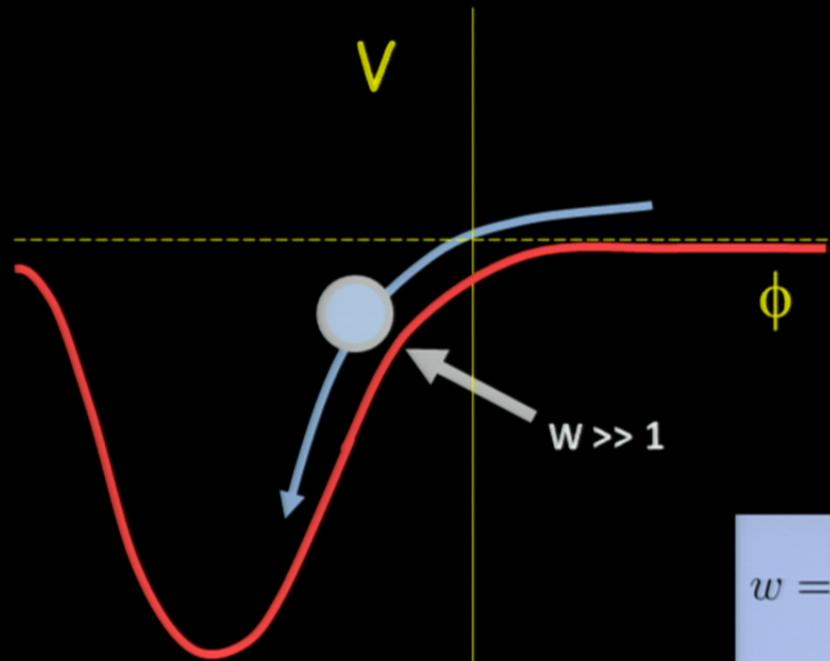

$$H^2 = \frac{8\pi G}{3} \frac{\rho_m^0}{a^3} + \frac{8\pi G}{3} \frac{\rho_r^0}{a^4} + \frac{\sigma^2}{a^6} + \dots - \frac{k}{a^2}$$

Khoury, Ovrut, PJS, Turok
Wesley, Erickson, PJS, Turok

$$H^2 = \frac{8\pi G}{3} \frac{\rho_m^0}{a^3} + \frac{8\pi G}{3} \frac{\rho_r^0}{a^4} + \frac{\sigma^2}{a^6} + \dots - \frac{k}{a^2}$$
$$+ \frac{8\pi G}{3} \frac{\rho_\phi^0}{a^{3(1+w)}} \leftarrow w \geq +1$$

Khoury, Ovrut, PJS, Turok
Wesley, Erickson, PJS, Turok

$w > 1 ?$

$$w = \frac{\frac{1}{2}\dot{\phi}^2 - V(\phi)}{\frac{1}{2}\dot{\phi}^2 + V(\phi)}$$

the big bang is a big bounce

no flatness or causal connectedness problem

new mechanism for smoothing the universe prior to the bang

the big bang is a big bounce
