Abstract:

Recall: for a KMS state ρ , $C_{AB}(\Delta z) = \langle A(\Delta z) B(0) \rangle_\rho$ satisfies $C_{AB}(\Delta z + i\beta) = C_{AB}(-\Delta z)$ where $\frac{z(0)}{z(z)}$ is the trajectory of the detector

Recall $H_I = \kappa \chi(z) \int d^d \vec{s} F(\vec{s}) \hat{m}(z) \hat{\phi}(t(z)\vec{s}, \vec{x}(z))$, for pointlike detectors. $F(\vec{s}) = \delta^{(d)}(\vec{s}) \Rightarrow H_I = \lambda \chi(z) \hat{m}(z) \hat{\phi}(t(z), \vec{x}(z))$

Properties of the Wightman "function": $W(z, z') := \text{tr}(\rho \hat{\phi}(z) \hat{\phi}(z')) = \frac{1}{2} \text{tr}(\rho (\hat{\phi}(z) \hat{\phi}(z') - \hat{\phi}(z') \hat{\phi}(z))) + \frac{1}{2} \text{tr}(\rho (\hat{\phi}(z) \hat{\phi}(z') + \hat{\phi}(z') \hat{\phi}(z)))$

$$W^*(z, z') = \text{tr}(\rho \hat{\phi}(z') \hat{\phi}(z)) = \text{tr}(\rho \hat{\phi}(z') \hat{\phi}(z)) = W(z', z)$$

$$\underbrace{\langle [\hat{\phi}(z), \hat{\phi}(z')] \rangle_\rho}_{i \text{Im}(W(z, z'))} \quad \underbrace{\langle \{\hat{\phi}(z), \hat{\phi}(z')\} \rangle_\rho}_{\text{Re}(W(z, z'))}$$

Recall: for a KMS state ρ , $C_{AB}(\Delta z) = \langle A(\Delta z) B(0) \rangle_\rho$ satisfies $C_{AB}(\Delta z) = \theta C_{BA}(\Delta z)$

Recall $H_{\mp} = \chi(z) \int d^d \xi F(\vec{\xi}) \hat{m}(z) \hat{\phi}(t(z, \vec{\xi}), \vec{x}(z, \vec{\xi}))$, for pointlike detectors: $F(\vec{\xi}) = \delta(\vec{\xi})$

Properties of the Wightman "function": $W(z, z') := \text{tr}(\rho \hat{\phi}(z) \hat{\phi}(z')) = \frac{1}{2} \text{tr}(\rho \{\hat{\phi}(z), \hat{\phi}(z')\})$

$$W^*(z, z') = \text{tr}(\rho \hat{\phi}(z') \hat{\phi}(z)) = \text{tr}(\rho \hat{\phi}(z') \hat{\phi}(z)) = W(z', z)$$

Satisfies $C_{AB}(\Delta z + i\beta) = C_{AB}(-\Delta z)$ where $t(z)$ is the trajectory of the detector

detectors: $F(\vec{z}) = \delta^{(d)}(\vec{z}) \Rightarrow H_I = \lambda \chi(z) \hat{m}(z) \hat{\phi}(t(z), \vec{x}(z))$

$$\hat{\phi}(z) \hat{\phi}(z') = \frac{1}{2} \text{tr} \left(\rho \left(\hat{\phi}(z) \hat{\phi}(z') - \phi(z') \phi(z) \right) \right) + \frac{1}{2} \text{tr} \left(\rho \left(\hat{\phi}(z) \hat{\phi}(z') + \phi(z') \phi(z) \right) \right)$$

$$\underbrace{\left(\left\langle [\hat{\phi}(z), \hat{\phi}(z')] \right\rangle_\rho \right)}_{i \text{Im}(w(z, z'))} \quad \underbrace{\left(\left\langle \{\hat{\phi}(z), \hat{\phi}(z')\} \right\rangle_\rho \right)}_{\text{Re}(w(z, z'))}$$

Recall: for a KMS state ρ , $C_{AB}(\Delta z) = \langle \hat{A}(\Delta z) \hat{B}(0) \rangle_\rho$ satisfies $C_{AB}(\Delta z) = \langle \hat{B}(0) \hat{A}(\Delta z) \rangle_\rho$

Recall $H_{\mp} = \kappa \chi(z) \int d^d \xi F(\vec{\xi}) \hat{m}(z) \hat{\phi}(t(z, \vec{\xi}), \vec{x}(z, \vec{\xi}))$, for pointlike detectors: $F(\vec{\xi}) = \delta(\vec{\xi})$

Properties of the Wightman "function": $W(z, z') := \text{tr}(\rho \hat{\phi}(z) \hat{\phi}(z')) = \frac{1}{2} \text{tr}(\rho \{\hat{\phi}(z), \hat{\phi}(z')\})$

$$W^*(z, z') = \text{tr}(\rho \hat{\phi}(z') \hat{\phi}(z)) = \text{tr}(\rho \hat{\phi}(z) \hat{\phi}(z')) = W(z', z)$$

Recall: for a KMS state ρ , $C_{AB}(\Delta z) = \langle \hat{A}(\Delta z) \hat{B}(0) \rangle_\rho$ satisfies $C_{AB}(\Delta z) = -C_{BA}(\Delta z + i\beta)$

Recall $H_{\mp} = \kappa \chi(z) \int d^d \xi F(\vec{\xi}) \hat{m}(z) \hat{\phi}(t(z, \vec{\xi}), \vec{x}(z, \vec{\xi}))$, for pointlike detectors: $F(\vec{\xi}) = \delta(\vec{\xi})$

Properties of the Wightman "function": $W(z, z') := \text{tr}(\rho \hat{\phi}(z) \hat{\phi}(z')) = \frac{1}{2} \text{tr}(\rho \{\hat{\phi}(z), \hat{\phi}(z')\})$

$$W^*(z, z') = \text{tr}(\hat{\phi}(z') \hat{\phi}(z) \rho) = \text{tr}(\rho \hat{\phi}(z') \hat{\phi}(z)) = W(z', z)$$

Thermal expectation \Rightarrow detector state evolves to $\rho = \frac{1}{Z} e^{-\beta H_0} \Rightarrow \frac{P_{ac}(\omega)}{P_{\text{det}}(\omega)} = e^{-\beta \omega}$

Satisfies $C_{AB}(\Delta z + i\beta) = C_{AB}(-\Delta z)$ where $t(z)$ is the trajectory of the detector

detectors: $F(\vec{z}) = \delta^{(d)}(\vec{z}) \Rightarrow H_I = \lambda \chi(z) \hat{m}(z) \hat{\phi}(t(z), \vec{x}(z))$

$$\hat{\phi}(z) \hat{\phi}(z') = \frac{1}{2} \text{tr} \left(\rho \left(\hat{\phi}(z) \hat{\phi}(z') - \phi(z') \phi(z) \right) \right) + \frac{1}{2} \text{tr} \left(\rho \left(\hat{\phi}(z) \hat{\phi}(z') + \phi(z') \phi(z) \right) \right)$$

$$= \underbrace{\frac{1}{2} \text{tr} \left(\rho \left(\hat{\phi}(z) \hat{\phi}(z') - \phi(z') \phi(z) \right) \right)}_{i \text{Im}(W(z, z'))} + \underbrace{\frac{1}{2} \text{tr} \left(\rho \left(\hat{\phi}(z) \hat{\phi}(z') + \phi(z') \phi(z) \right) \right)}_{\text{Re}(W(z, z'))}$$

$\frac{\phi(z)}{\phi(z')} = e^{-\beta z}$

Recall: for a KMS state ρ , $C_{AB}(\Delta z) = \langle \hat{A}(\Delta z) \hat{B}(0) \rangle_\rho$ satisfies $C_{AB}(\Delta z) = \langle \hat{B}(0) \hat{A}(\Delta z) \rangle_\rho$

Recall $H_{\mp} = \chi(z) \int d^d \xi F(\vec{\xi}) \hat{m}(z) \hat{\phi}(t(z, \vec{\xi}), \vec{x}(z, \vec{\xi}))$, for pointlike detectors: $F(\vec{\xi}) = \delta(\vec{\xi})$

Properties of the Wightman "function": $W_1(z, z') := \text{tr}(\rho \hat{\phi}(z) \hat{\phi}(z')) = \frac{1}{2} \text{tr}(\rho \hat{\phi}(z) \hat{\phi}(z'))$

$$W_1^*(z, z') = \text{tr}(\hat{\phi}(z') \hat{\phi}(z) \rho) = \text{tr}(\rho \hat{\phi}(z') \hat{\phi}(z)) = W_1(z', z)$$

Thermal expectation \Rightarrow detector state evolves to $\rho = \frac{1}{Z} e^{-\beta H_0} \Rightarrow \frac{P(\omega)}{P_{\text{tot}}(\omega)} = e^{-\beta \omega}$

Recall: for a KMS state ρ , $C_{AB}(\Delta z) = \langle \hat{A}(\Delta z) \hat{B}(0) \rangle_\rho$ satisfies $C_{AB}(\Delta z) = \langle \hat{B}(0) \hat{A}(\Delta z) \rangle_\rho$

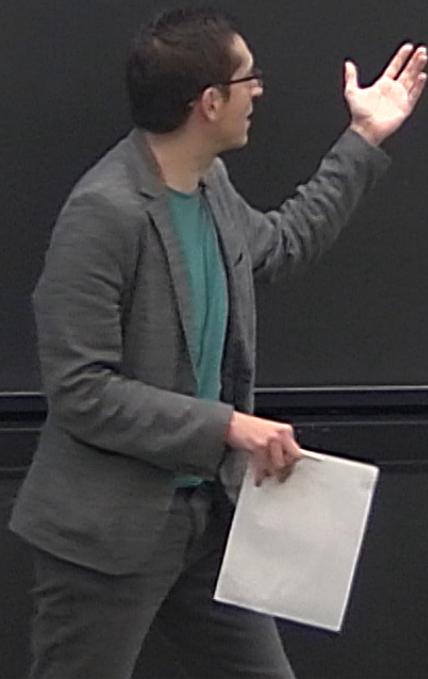

Recall $H_{\text{eff}} = \chi \chi(z) \int d^d \xi F(\vec{\xi}) \hat{m}(z) \hat{\phi}(t(z, \vec{\xi}), \vec{x}(z, \vec{\xi}))$, for pointlike detectors: $F(\vec{\xi}) = \delta(\vec{\xi})$

Properties of the Wightman "function": $W_1(z, z') := \text{tr}(\rho \hat{\phi}(z) \hat{\phi}(z')) = \frac{1}{2} \text{tr}(\rho \hat{\phi}(z) \hat{\phi}(z'))^*$

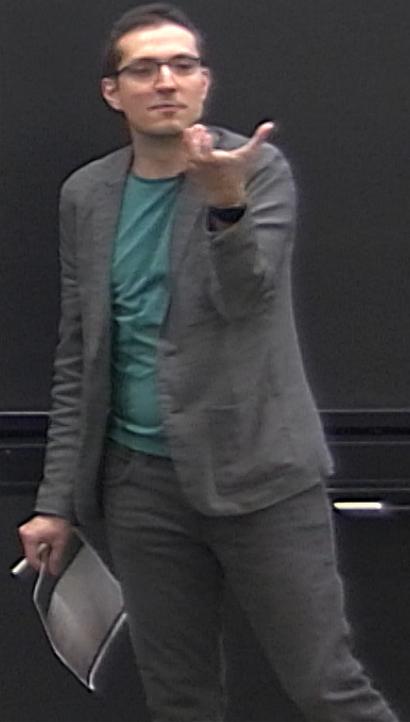

$$W_1^*(z, z') = \text{tr}(\hat{\phi}(z') \hat{\phi}(z) \rho) = \text{tr}(\rho \hat{\phi}(z') \hat{\phi}(z)) = W_1(z', z)$$

Thermal expectation \Rightarrow detector state evolves to $\rho = \frac{1}{Z} e^{-\beta H_0} \Rightarrow \frac{P_{\text{oc}}(\omega)}{P_{\text{dec}}(\omega)} = e^{-\beta \omega}$

Recall, for a pointlike detector: $P(\Omega) = \chi^2 \sigma \hat{F}(\Omega, \sigma)$, $\hat{F}(\Omega, \sigma) := \frac{1}{\sigma} \int_{\mathbb{R}} dz \int_{\mathbb{R}} dz' \chi\left(\frac{z}{\sigma}\right) \chi\left(\frac{z'}{\sigma}\right) e^{i\Omega(z-z')} w(z, z')$

Recall, for a pointlike detector: $P(\Omega) = \chi^2 \sigma \hat{F}(\Omega, \sigma)$, $\hat{F}(\Omega, \sigma) := \frac{1}{\sigma} \int_{\mathbb{R}} dz \int_{\mathbb{R}} dz' \chi\left(\frac{z}{\sigma}\right) \chi\left(\frac{z'}{\sigma}\right) e^{i\Omega(z-z')} w(z, z')$
