

Title: Mathematical Physics Seminar - continued Discussion

Date: Jan 28, 2019 02:00 PM

URL: <http://pirsa.org/19010080>

Abstract: 

This seminar will be a continued discussion on the topic of last week's seminar: &nbsp;

I will describe some general mathematical structures expected to arise from field theories with boundary conditions in terms of factorization algebras, and outline some results and future directions in the study of boundary chiral algebras for 3d  $N=4$  theories following the work of Costello and Gaiotto.

Given by Dylan Butson.
