

Title: The VisIt Visualization Toolkit

Speakers: Hung-Yi Pu

Date: November 19, 2019 - 1:00 PM

URL: <http://pirsa.org/19110124>

Abstract: VisIt (<https://wci.llnl.gov/simulation/computer-codes/visit/>) is an interactive, powerful visualization, animation, and analysis tool.

VisIt is an open source and available for Unix, Windows or Mac users.

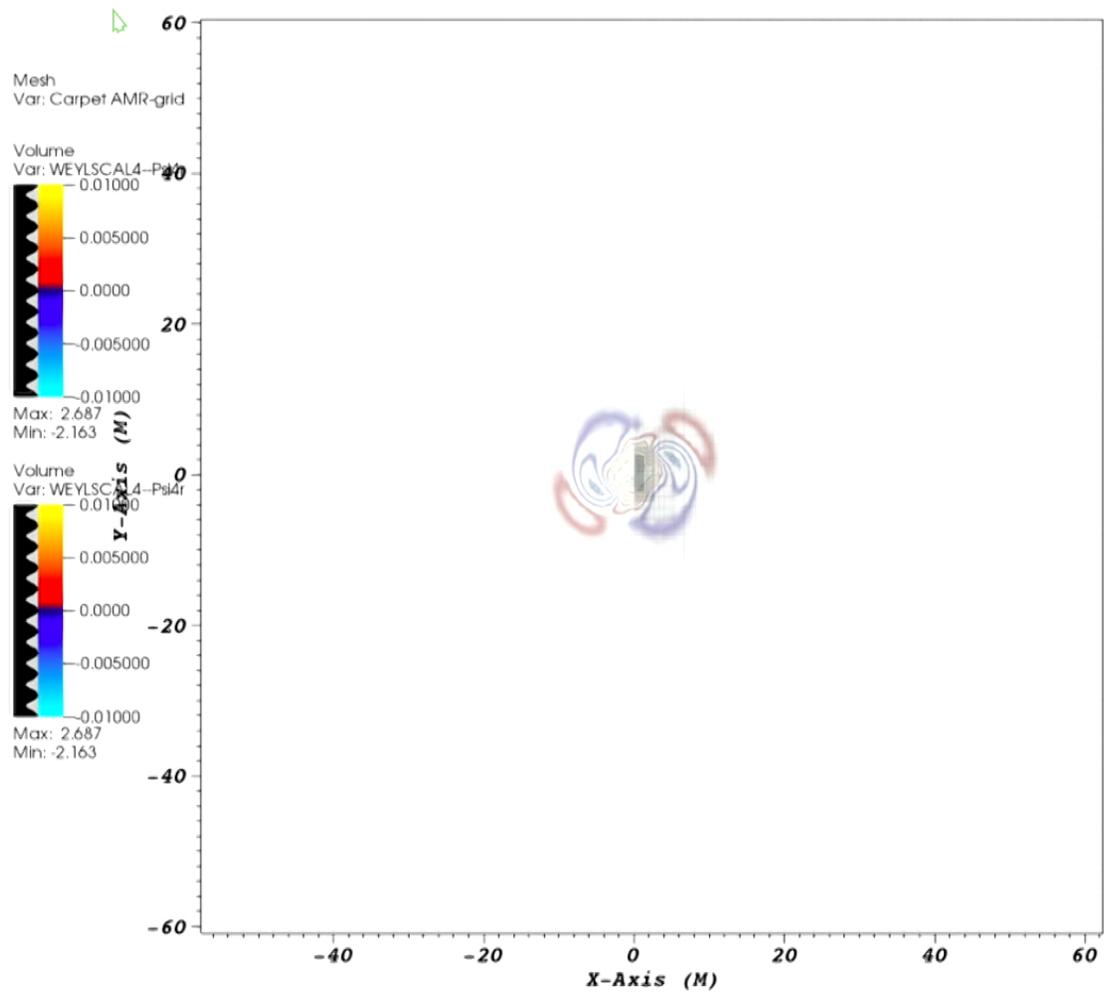

In this tutorial, after a brief introduction of VisIt, we will walk through several basic plotting/animation functions by using some toy data.

Introduction to VisIt

this file is available on symmetry:
`/gpfs/hpu/VisIt_tutorial/`

prepared by Hung-Yi Pu
Computational Physics Tutorial, 2019 Nov 19

VisIt

VisIt was originally developed by the Department of Energy (DOE) Advanced Simulation and Computing Initiative (ASCI) to visualize and analyze the results of terascale simulations.

About Visit

Visit is an **Open Source**, interactive, scalable, visualization, animation and analysis tool. From Unix, Windows or Mac workstations, users can interactively visualize and analyze data ranging in scale from small ($<10^1$ core) desktop-sized projects to large ($>10^5$ core) leadership-class computing facility simulation campaigns. Users can quickly generate visualizations, animate them through time, manipulate them with a

variety of operators and mathematical expressions, and save the resulting images and animations for presentations. Visit contains a rich set of visualization features to enable users to view a wide variety of data including scalar and vector fields defined on two- and three-dimensional (2D and 3D) structured, adaptive and unstructured meshes. Owing to its customizable plugin design, Visit is capable of visualizing data from over 120 different scientific data formats (see [this partial list](#)). [See a [table of key features](#) and a [complete table of the tool's features](#).]

installation

- on Mac OSX
<http://macappstore.org/visit/>
- on Windows
<https://wci.llnl.gov/simulation/computer-codes/visit/executables>
- on symmetry
 - step 1: `ssh -Y user@symmetry`
 - step 2: `$module load visti/3.0.2`
 - step 3: `$visit`

installation

- on Mac OSX
<http://macappstore.org/visit/>
- on Windows
<https://wci.llnl.gov/simulation/computer-codes/visit/executables>
- on symmetry
 - step 1: `ssh -Y user@symmetry`, or use vnc (faster)
 - step 2: `$module load visti/3.0.2`
 - step 3: `$visit`

tutorial (basic)

- run VisIt and load data (copy data from [/hpu/VisIt_tutorial/data](#) or [/gpfs/eschnetter/simulations/hydro-sphericalshock/output-0000/hydro-sphericalshock/*.visit](#) to your local folder)

- control panel: add > Pseudocolor > rho > Draw
- top panel: control > annotation > 3D , Objects, General ▶▶
- top panel: file > save movie

Time=11

Connection

Share batch job with Metadata Server

Tunnel data connections through SSH

Method used to determine local host name when not tunneling:

Use local machine name

Parse from SSH_CLIENT environment variable

Specify manually:

SSH command ssh

SSH port 22

Use gateway

New Host Delete Host

Copy Host Export Host

Apply
