

Title: Session 2 - Subhayan Sahu

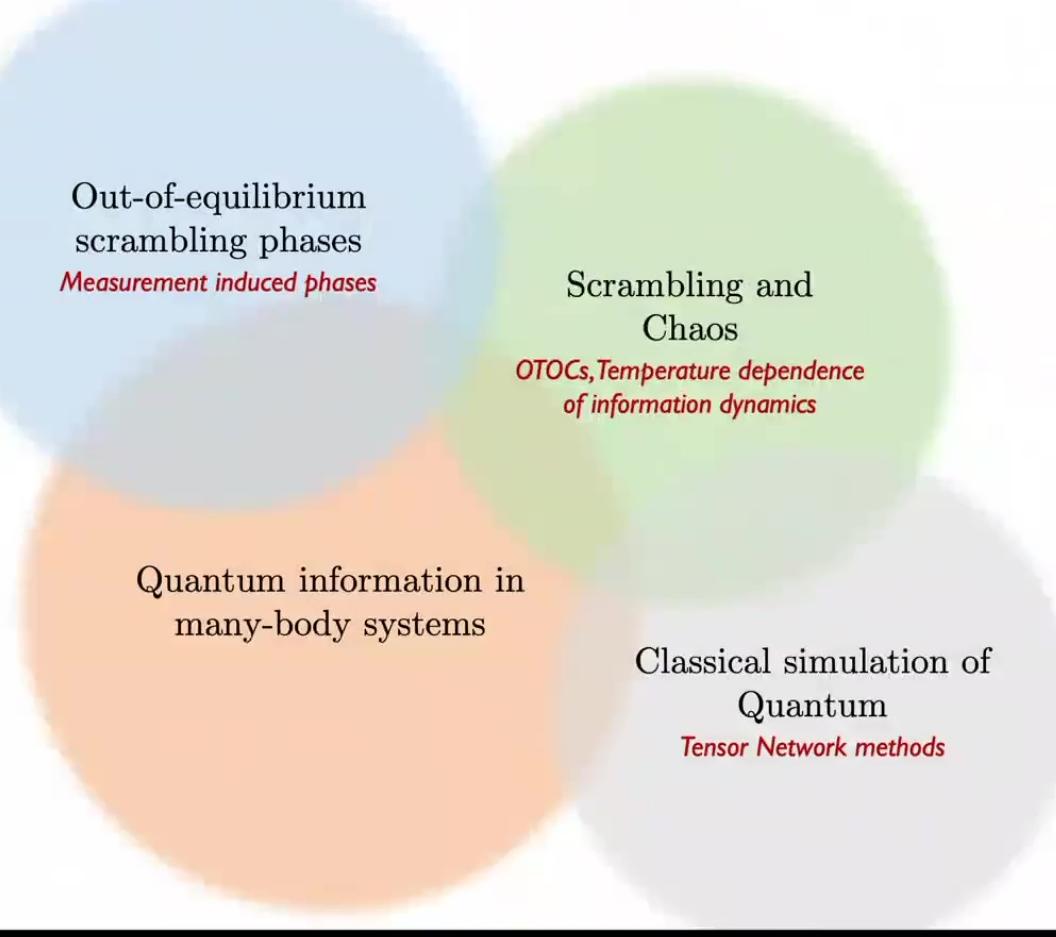

Speakers:

Collection: POSTDOC WELCOME 2022

Date: October 24, 2022 - 11:40 AM

URL: <https://pirsa.org/22100125>

# Quantum information dynamics in many-body systems

**Subhayan Sahu**

PI Postdoc Welcome!

Oct 24, 2022

# Measurement-induced entanglement phases in solvable quantum circuits

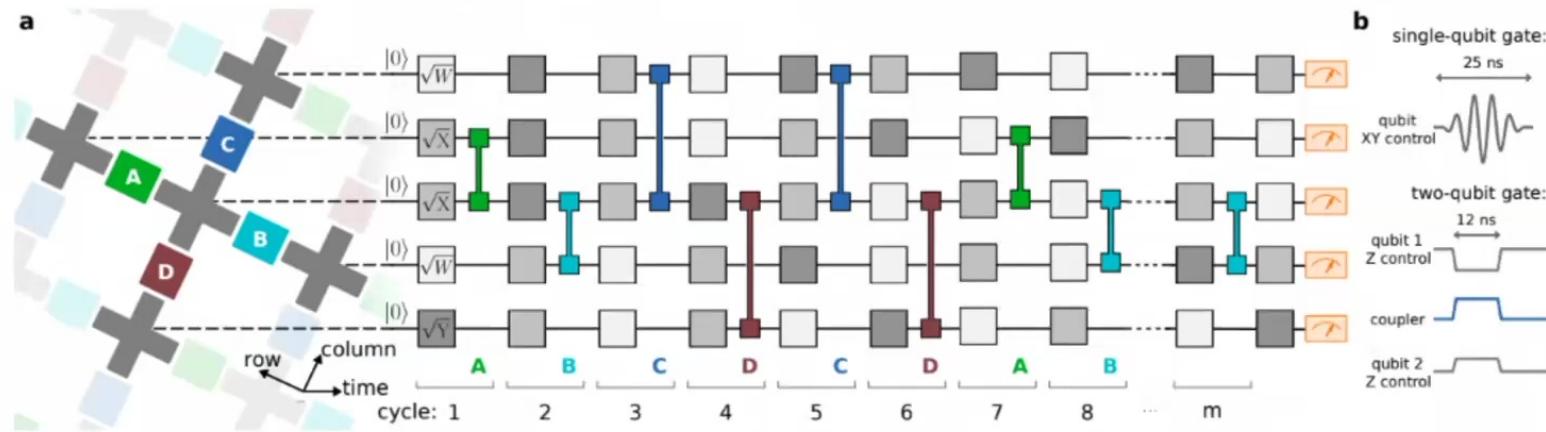

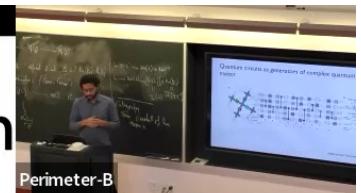

*Work with Shao-Kai Jian, Gregory Bentsen and Brian Swingle*

*2104.07688 – Bentsen\*, SS\*, Swingle*

*2109.00013 - SS\*, Jian\*, Bentsen, Swingle*

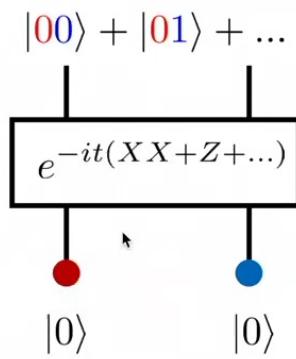

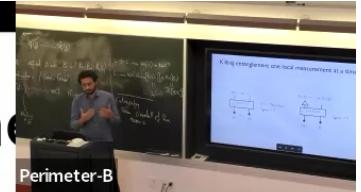

# Quantum circuits as generators of complex quantum matter

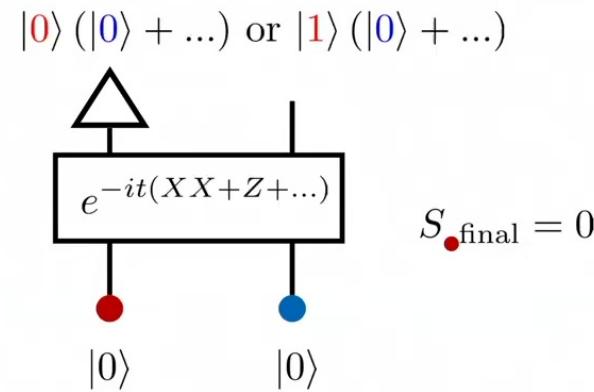

Google's quantum "supremacy" ...

3

# Killing entanglement one local measurement at a time

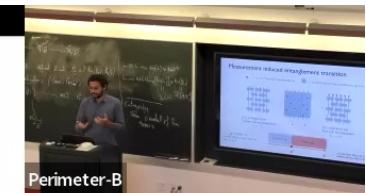

$$S = -\text{Tr}(\rho \ln \rho)$$
$$S_{\text{final}} > 0$$

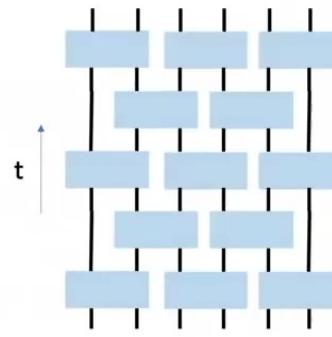

$$S_{\text{final}} = 0$$

# Measurement induced entanglement transition

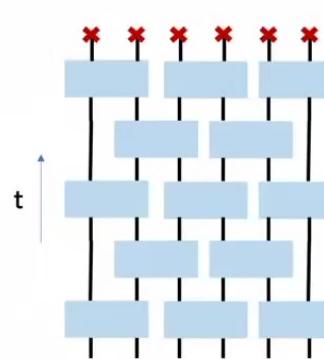

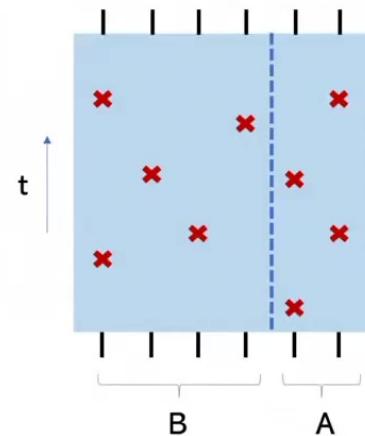

✖ = Local Projective measurements      ⬤ = Locality preserving scrambling unitary

Any subregion has  
Volume law entanglement

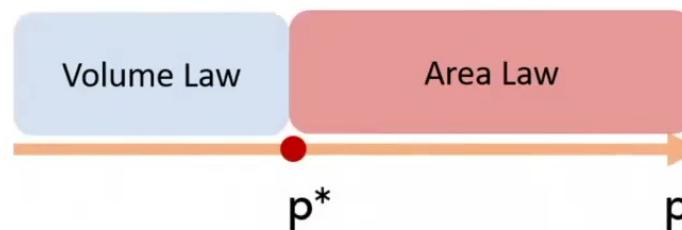

$$S_A \sim A$$

Any subregion has  
Area law entanglement

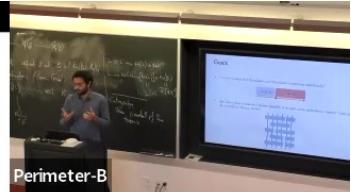

$$S_A \sim \partial A$$

$p$  = probability of  
measuring in one layer of  
the circuit

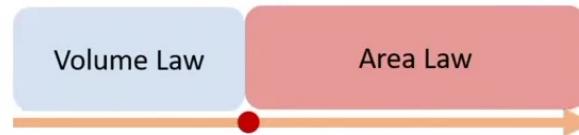

[Li, Chen, Fisher PRB 2018, 2019]  
[Skinner, Ruhman, Nahum PRX 2019] ...

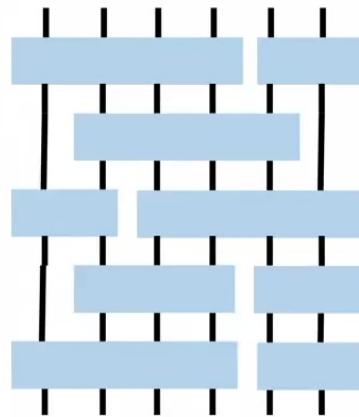

# Goals

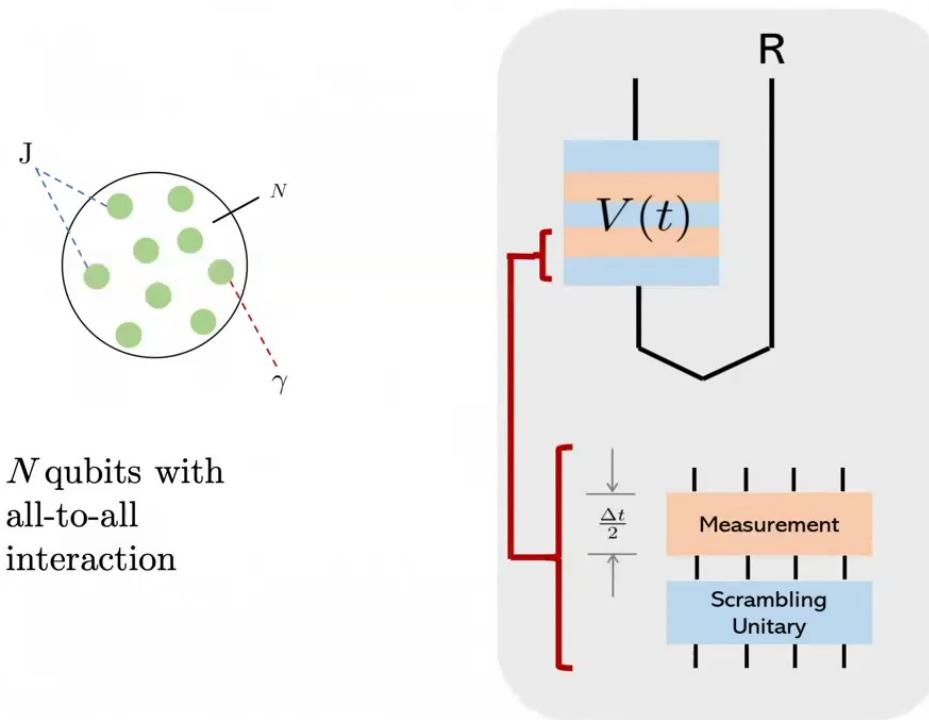

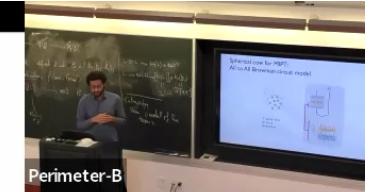

- Can we understand the phases and the phase transitions analytically?

- Are there other dynamical phases possible if we add more ingredients, namely long-range interactions in the unitaries?

# Spherical cow for MIPT: All to All Brownian circuit model

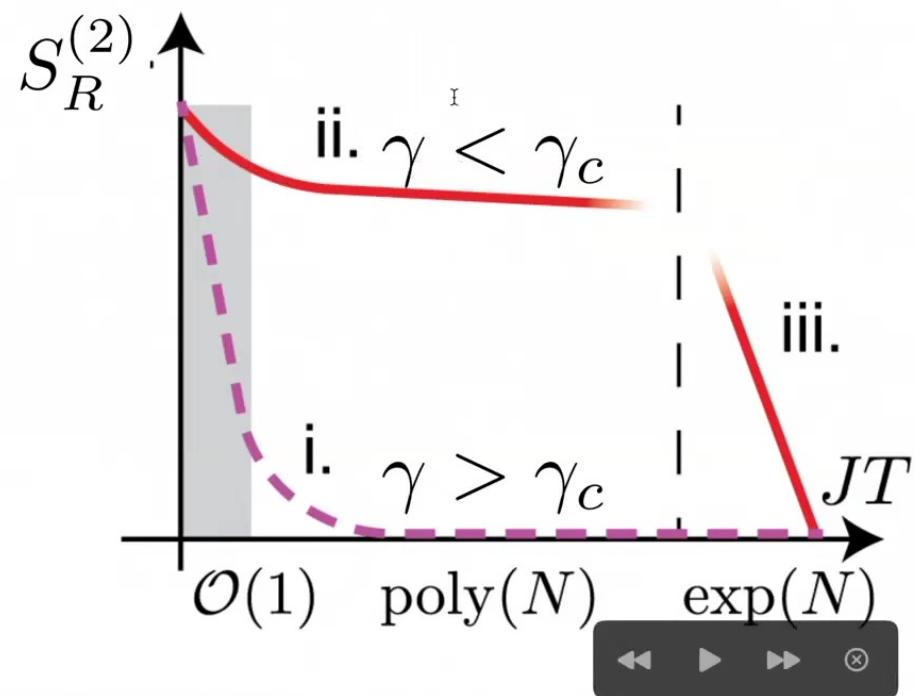

# Measurement induced purification transition

$$\text{Purity}_R(t) = \text{Tr}(\rho_R^2(t)) = e^{-S_R^{(2)}}$$

$$\text{R\'enyi entropy: } S_R^{(n)} = \frac{1}{1-n} \ln \text{Tr} \rho_R^n$$

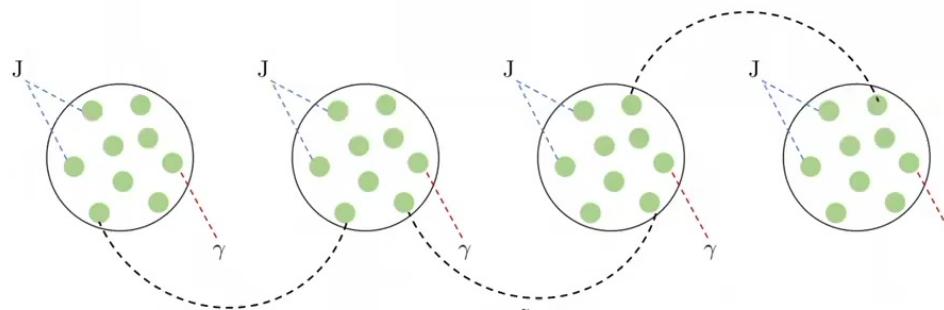

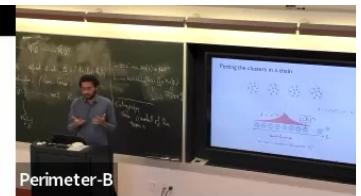

Analytically accessible critical behavior

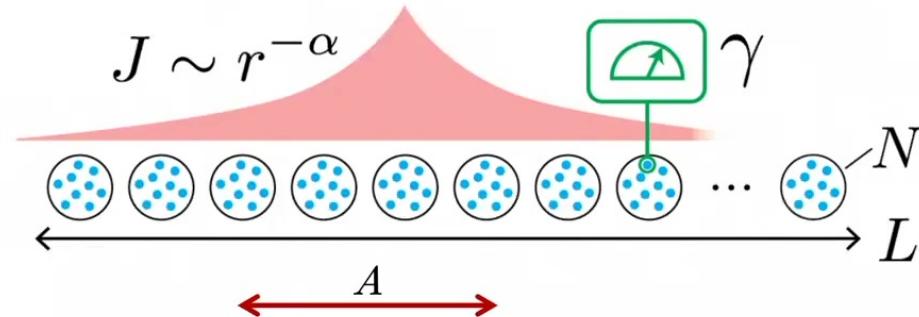

$$\hat{S}^{(2)} \sim (\gamma_c - \gamma)^{3/2}$$

Bentsen, SS, Swingle 2021

# Putting the clusters in a chain

$$\mathbb{E} J_r(t) J_s(t') \sim |r - s|^{-2\alpha} \delta_{tt'}$$

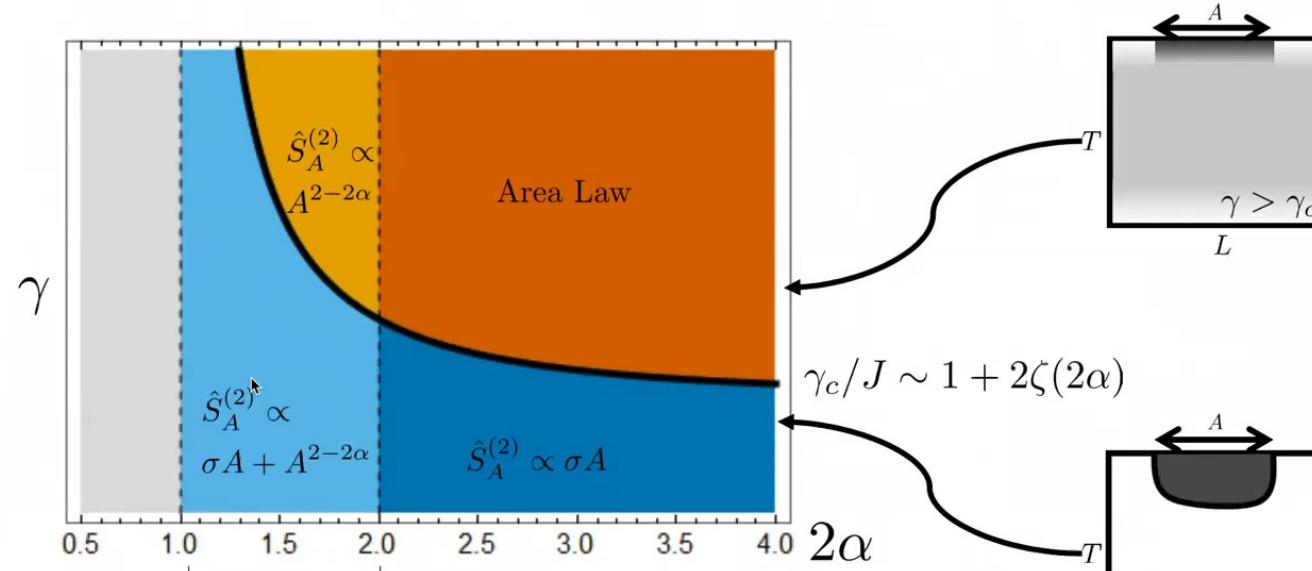

We want to measure the entropy  $\hat{S}_A^{(2)}$

# Entanglement phase diagram

$$I \sim \int_{t,r} \left[ -\phi \partial_t^2 \phi - \int_s \phi_r \phi_s |r-s|^{-2\alpha} - (\gamma_c - \gamma) \phi^2/2 + \phi^4/4 \right]$$

Novel fractal corrections to volume law entanglement

Fractal corrections to the entropy due to the long-range interaction on domain wall
