

Title: Session 2 - Marios Galanis

Speakers: Marios Galanis

Collection: POSTDOC WELCOME 2022

Date: October 24, 2022 - 12:10 PM

URL: <https://pirsa.org/22100129>

# Past and Current Research

Marios Galanis

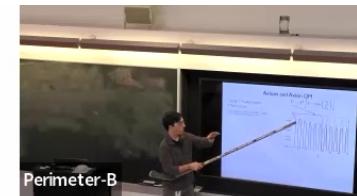

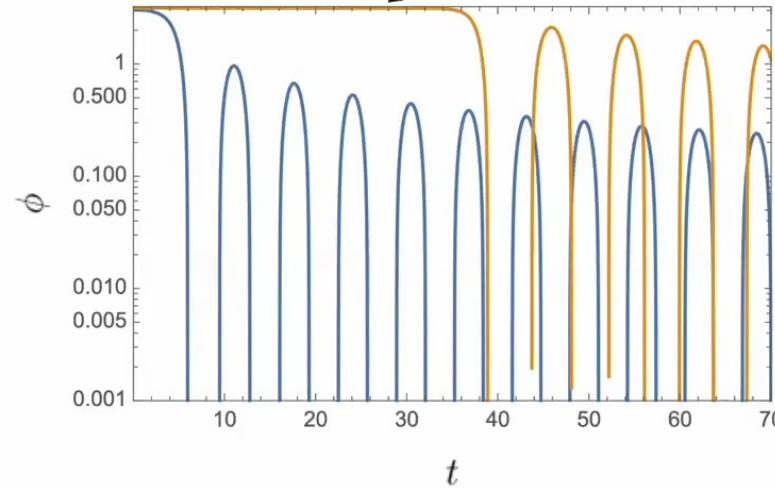

Postdoc Welcome 2022

# Axions and Axion DM

- Large Misalignment Mechanism

[A. Arvanitaki, S. Dimopoulos, **MG**, L. Lehner, J.Thompson, K.Van Tilburg, 2019]

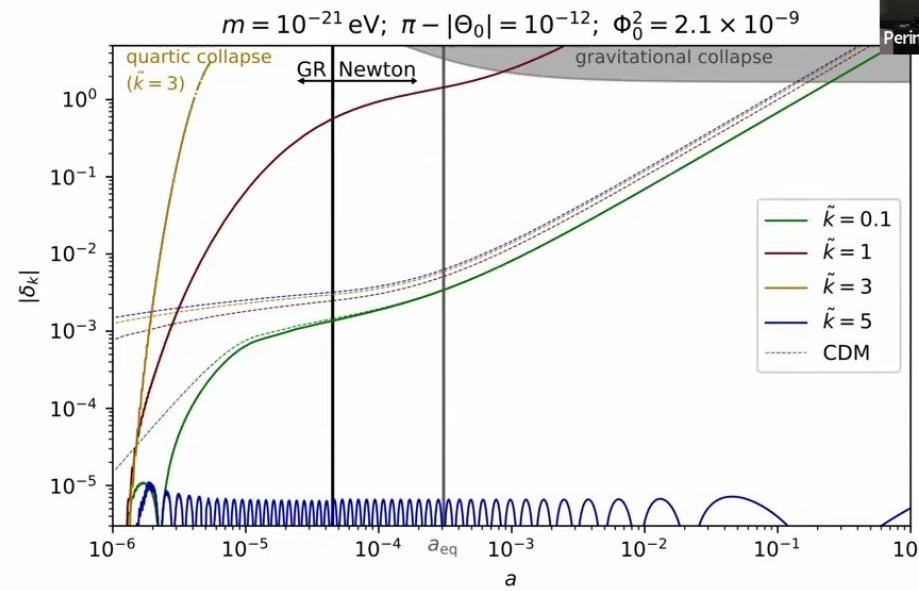

$$V \sim \Lambda^4 \left[ 1 - \cos \left( \frac{\phi}{f_a} \right) \right]$$

# Axions and Axion DM

- Large Misalignment Mechanism

[A. Arvanitaki, S. Dimopoulos, **MG**, L. Lehner, J.Thompson, K.Van Tilburg, 2019]

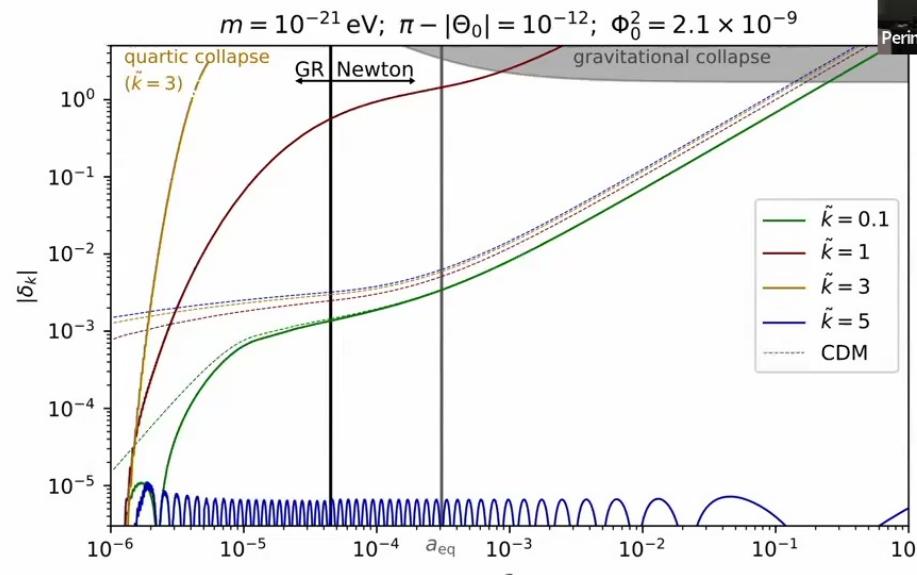

# Axions and Axion DM

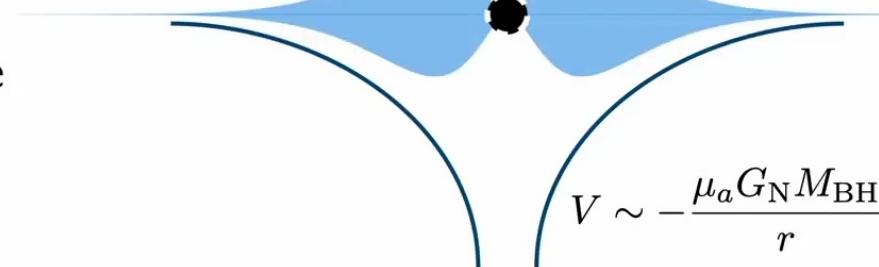

- Large Misalignment Mechanism

[A. Arvanitaki, S. Dimopoulos, MG, L. Lehner, J.Thompson, K.Van Tilburg, 2019]

- Black Hole Superradiance

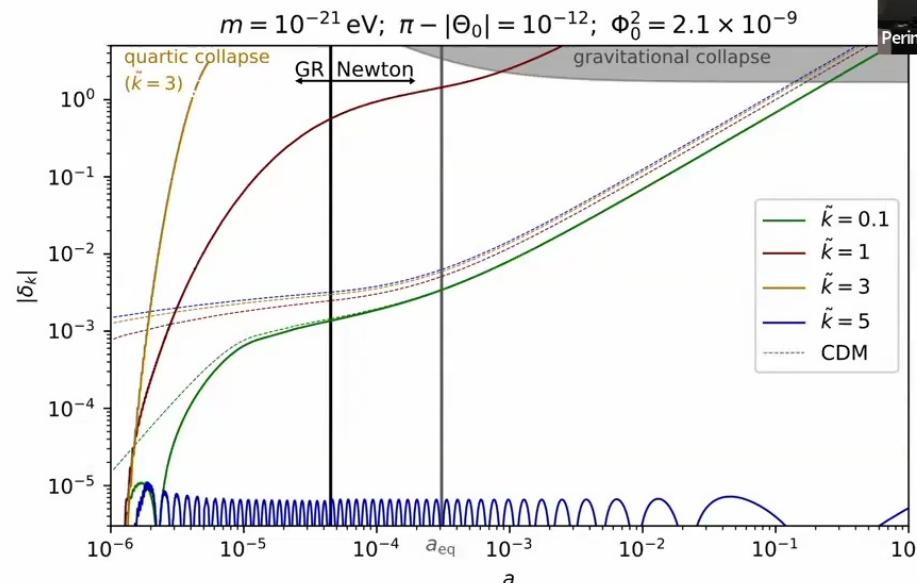

# Axions and Axion DM

- Large Misalignment Mechanism

[A. Arvanitaki, S. Dimopoulos, **MG**, L. Lehner, J. Thompson, K. Van Tilburg, 2019]

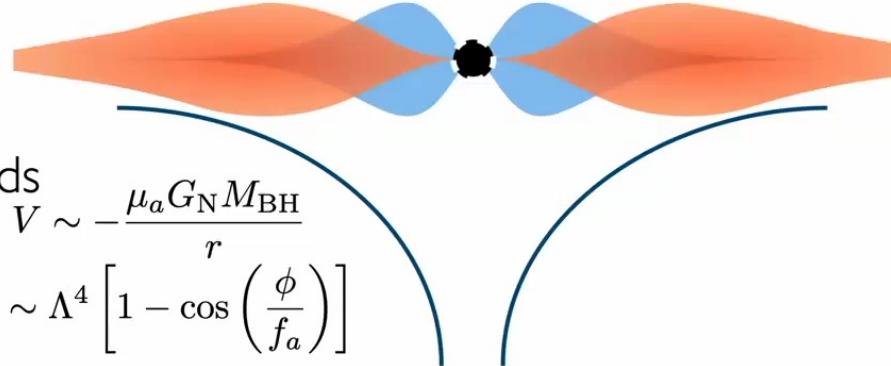

- Black Hole Superradiance of self-interacting scalar fields

[M. Baryakhtar, **MG**, R. Lasenby, O. Simon 2021]

$$V \sim -\frac{\mu_a G_N M_{\text{BH}}}{r}$$

$$V \sim \Lambda^4 \left[ 1 - \cos \left( \frac{\phi}{f_a} \right) \right]$$

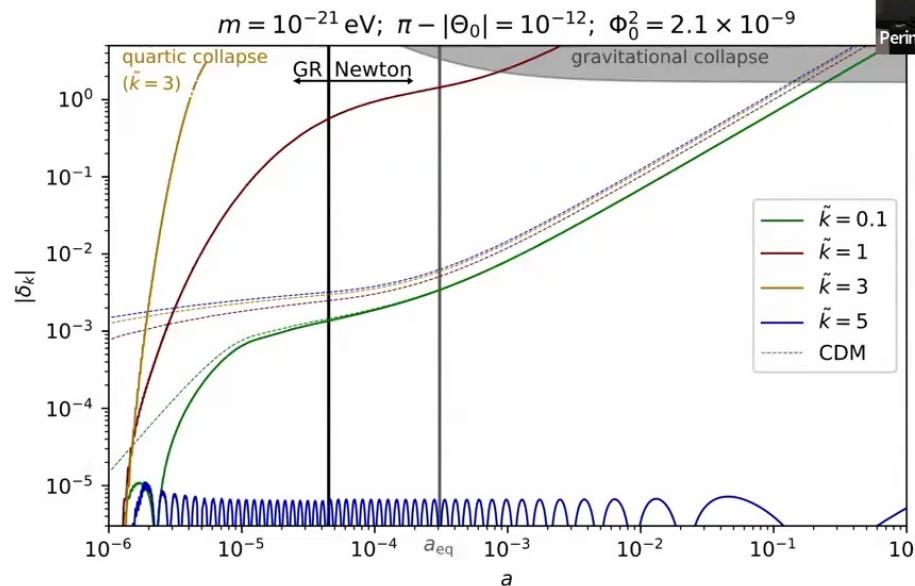

# Axions and Axion DM

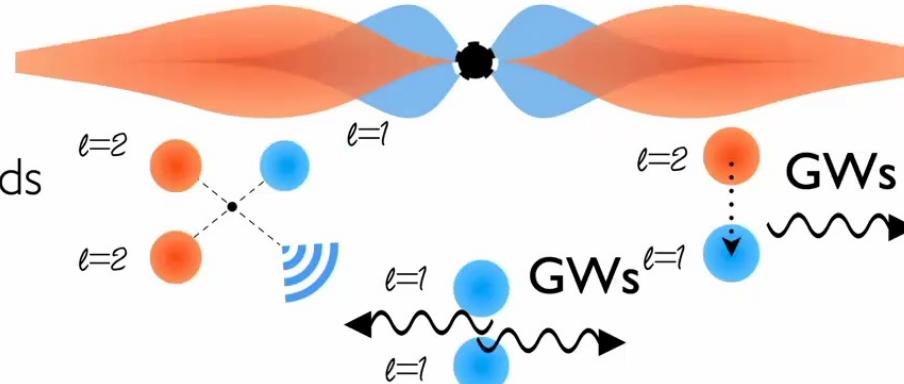

- Large Misalignment Mechanism

[A. Arvanitaki, S. Dimopoulos, **MG**, L. Lehner, J. Thompson, K. Van Tilburg, 2019]

- Black Hole Superradiance of self-interacting scalar fields

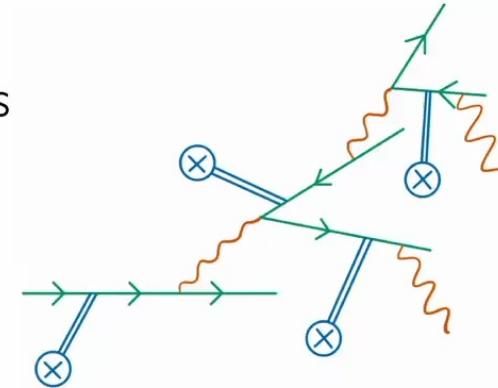

[M. Baryakhtar, **MG**, R. Lasenby, O. Simon 2021]

## “Particle” DM

- Gravitational Production of Dark Sectors through non-perturbative effects

[A. Arvanitaki, S. Dimopoulos, **MG**, D. Racco, O. Simon, J. Thompson, 2021]

- Collective Effects in DM scattering in astrophysical media

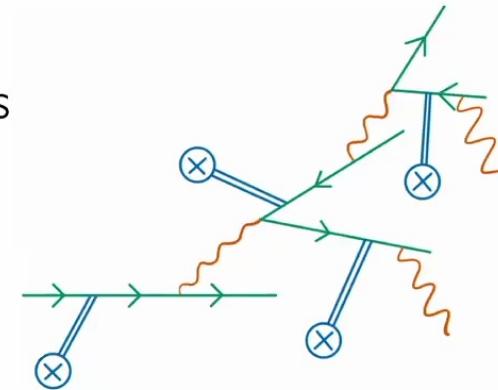

[W. DeRocco, **MG**, R. Lasenby, 2022]

## “Particle” DM

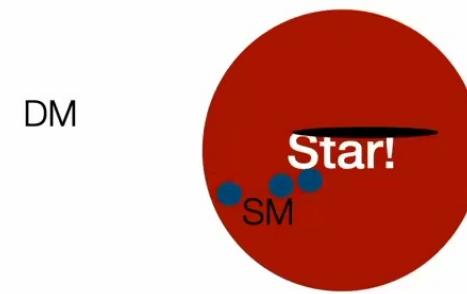

- Gravitational Production of Dark Sectors through non-perturbative effects

[A. Arvanitaki, S. Dimopoulos, **MG**, D. Racco, O. Simon, J. Thompson, 2021]

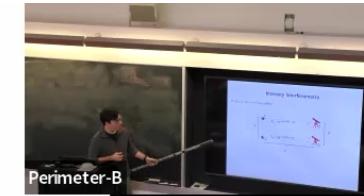

- Collective Effects in DM scattering in astrophysical media

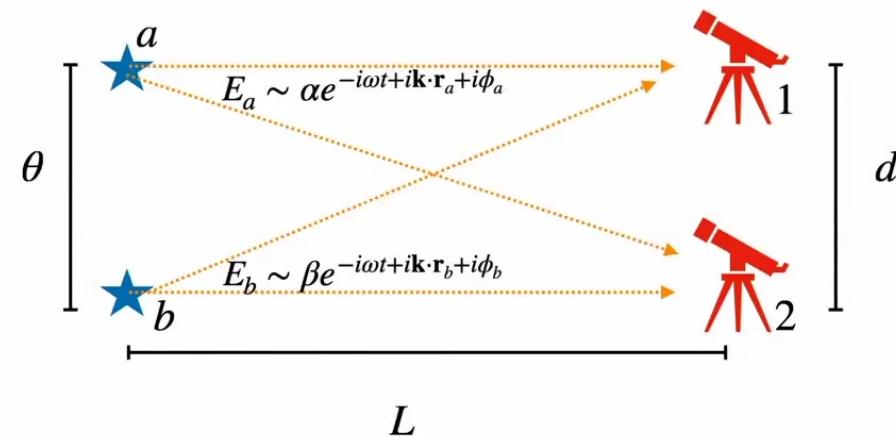

[W. DeRocco, **MG**, R. Lasenby, 2022]

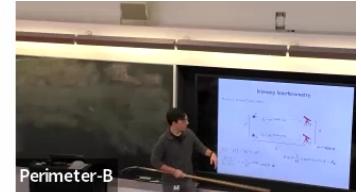

# Intensity Interferometry

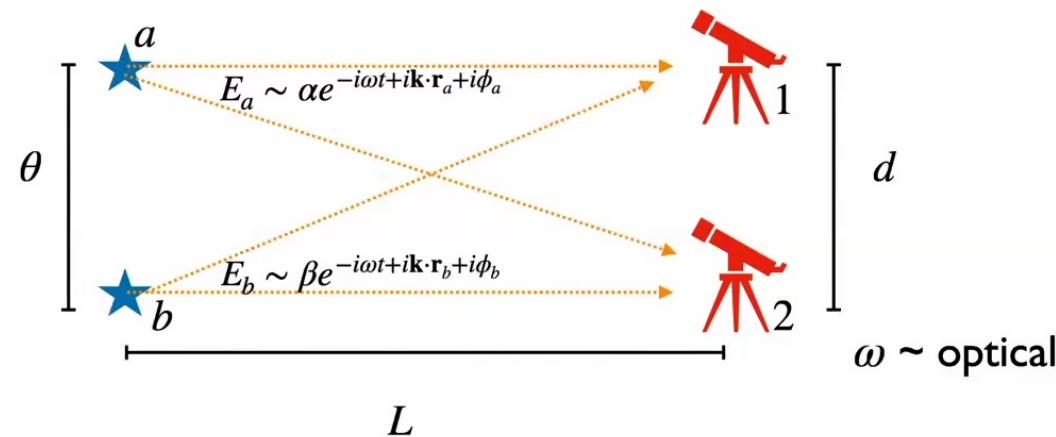

Hanbury Brown-Twiss effect

# Intensity Interferometry

Hanbury Brown-Twiss effect

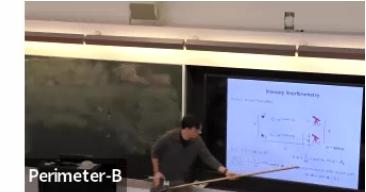

$$\langle I_1 \rangle \sim \langle I_2 \rangle \sim |\alpha|^2 + |\beta|^2$$

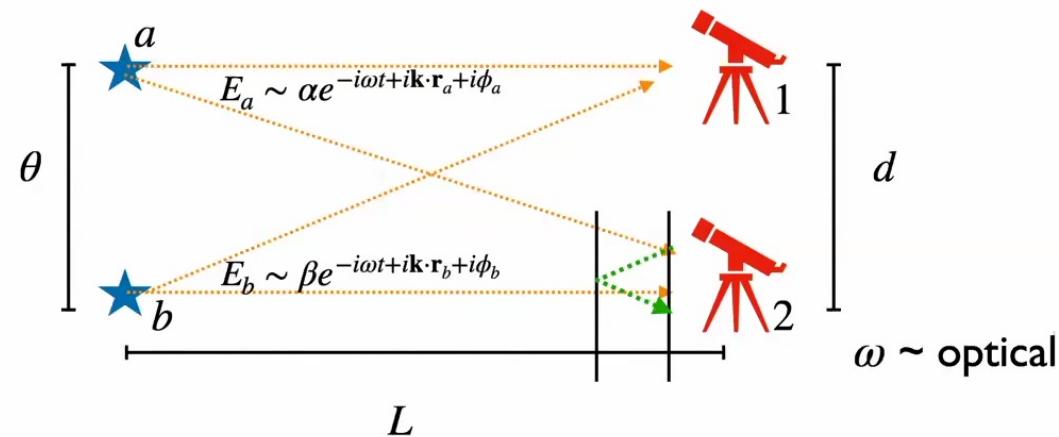

$$\theta, \sigma_\theta \simeq \frac{1}{kd} \sim \mu\text{arcsec}, \text{ for } d \sim R_\oplus$$

$$\frac{\langle I_1 I_2 \rangle}{\langle I_1 \rangle \langle I_2 \rangle} \sim 1 + \frac{\tau_c}{\Delta t} e^{-(k\theta \cdot \mathbf{d})^2} \cos(k \theta \cdot \mathbf{d})$$

# Intensity Interferometry

Hanbury Brown-Twiss effect

$$\langle I_1 \rangle \sim \langle I_2 \rangle \sim |\alpha|^2 + |\beta|^2$$

$$\theta, \sigma_\theta \simeq \frac{1}{kd} \sim \mu\text{arcsec}, \text{ for } d \sim R_\oplus$$

$$\frac{\langle I_1 I_2 \rangle}{\langle I_1 \rangle \langle I_2 \rangle} \sim 1 + \frac{\tau_c}{\Delta t} e^{-(k\theta \cdot \mathbf{d})^2} \cos(k \theta \cdot \mathbf{d})$$

**Trick:** Add mirrors to delay to one path  
 $k\theta \cdot \mathbf{d} \rightarrow k(\theta \cdot \mathbf{d} - 2l)$

# What is it good for?

- Astrometric micro-lensing
- Exoplanet Detection (wobbles in binary systems)
- Parallax Measurement (Distance Ladder?)
- Dark Matter clumps
- Accelerations and Gravitational Potential mapping

## Excited About:

- BSM phenomenology in Astrophysics, Cosmology and Lab
- Anything potentially measurable!
