# Everything that can be learned about a causal structure with latent variables by observations and interventions

arXiv: 2407.01686

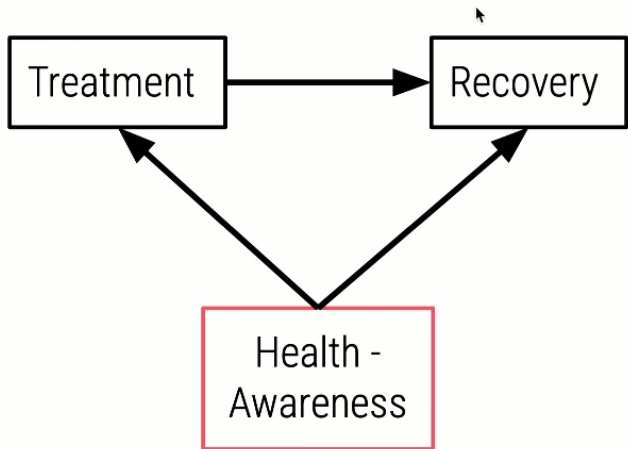

Marina Maciel Ansanelli

Joint work with Elie Wolfe and Robert Spekkens

**Does the treatment cause  
the recovery?**

OR

**Observationally  
equivalent**

OR

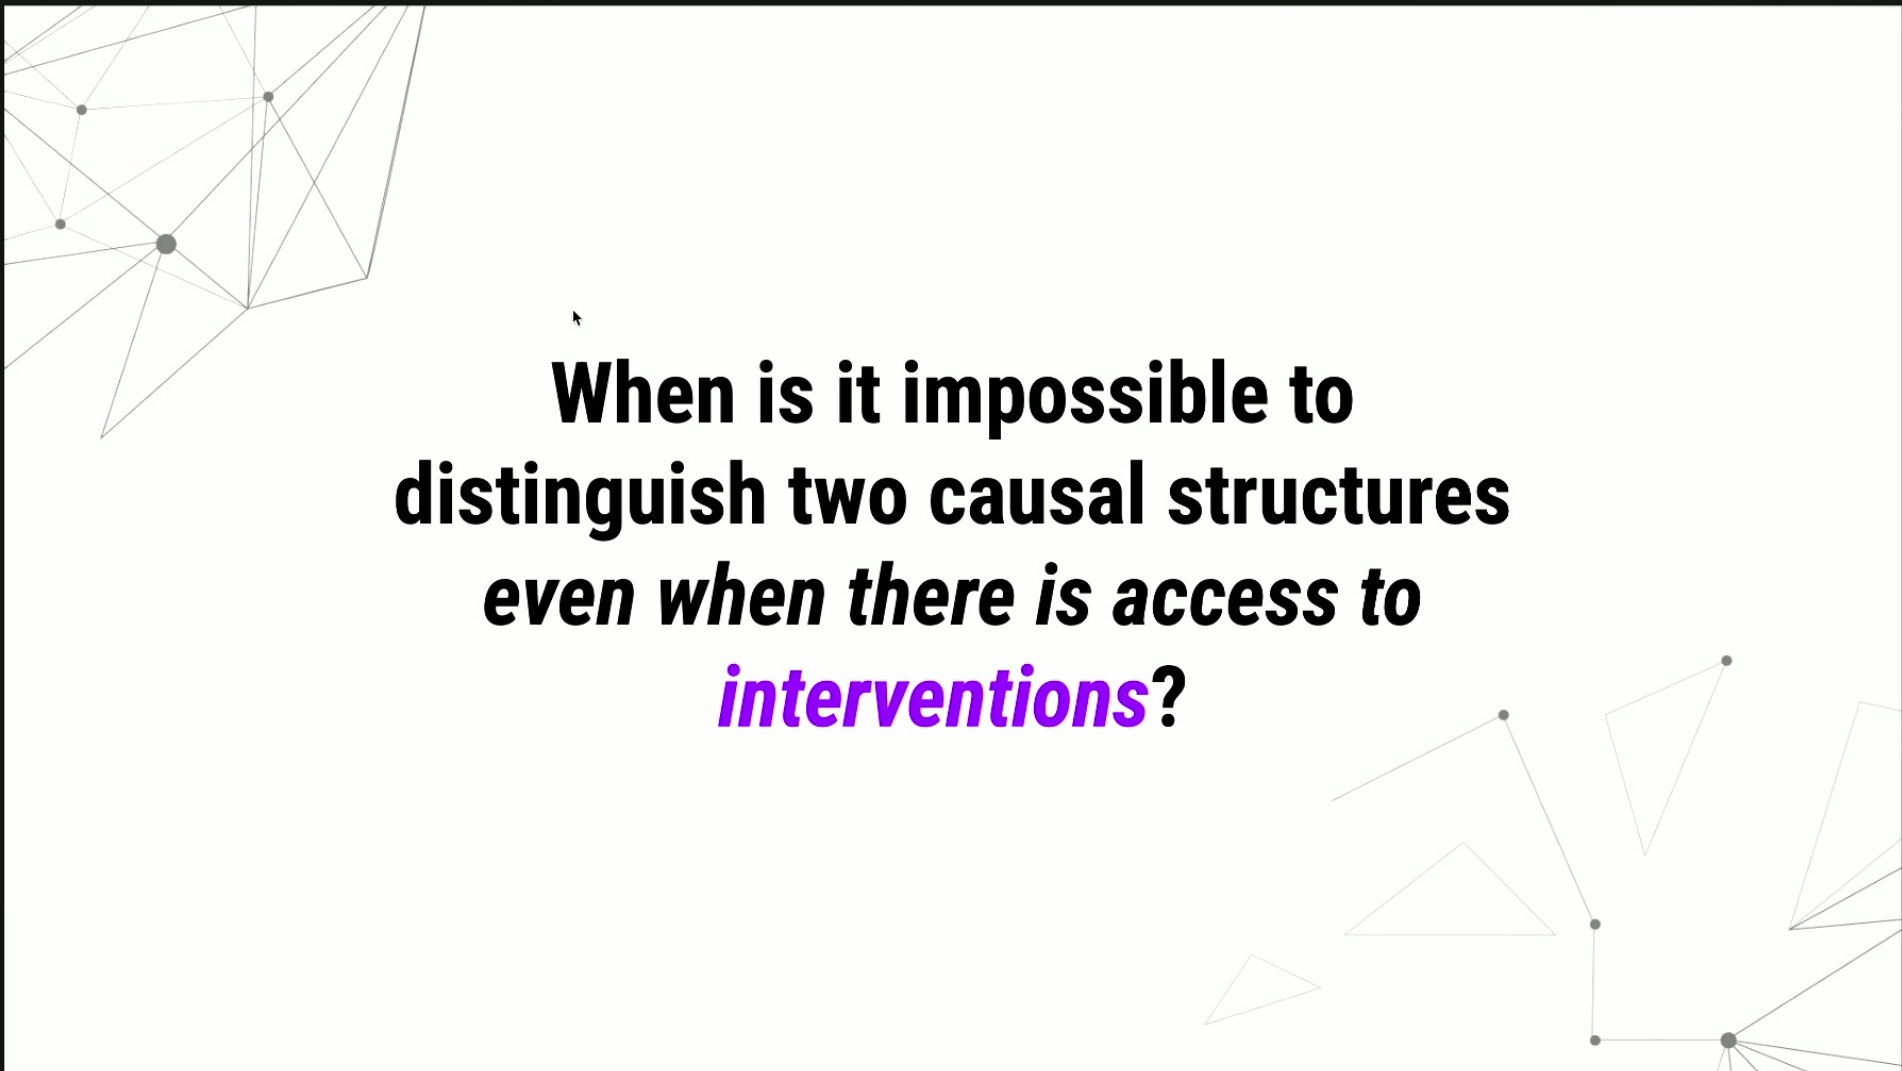

**Passive observation only: Indistinguishable**

OR

**Passive observation only: Indistinguishable**  
**Intervene on Treatment: Distinguishable**

**When is it impossible to  
distinguish two causal structures  
*even when there is access to  
interventions?***

# Observe&Do Probing Scheme

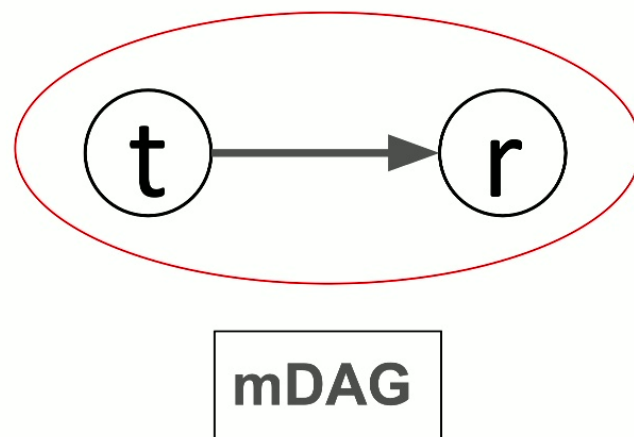

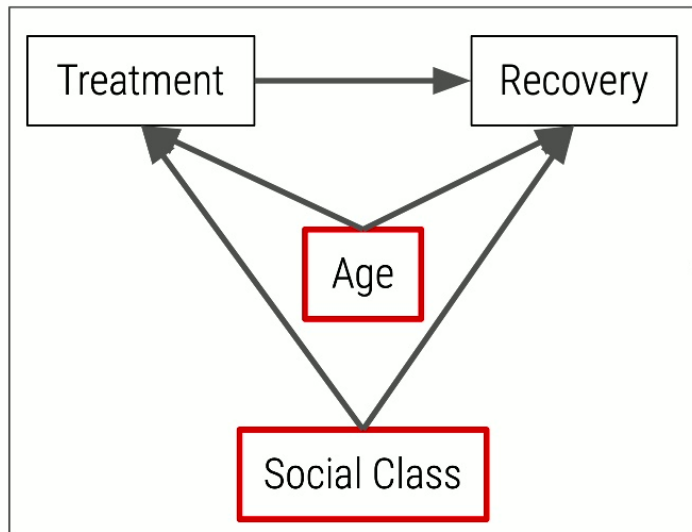

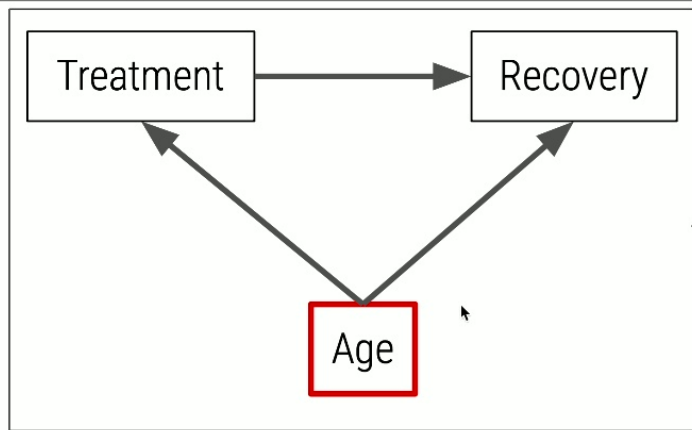

First observe the natural value of the variable ( $a^b$ ), and then perform an intervention that forces it to take another value ( $a^\#$ ).

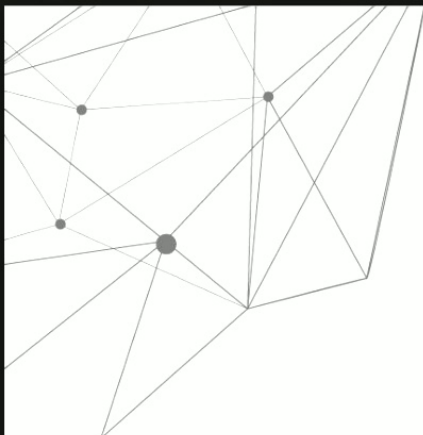

$$P(a^b b | a^\#)$$

Do this for every visible variable = **Observe&Do Probing Scheme**

Robin J. Evans. Graphs for Margins of Bayesian Networks. *Scand. J. Stat.*, 43(3):625–648, 2016.

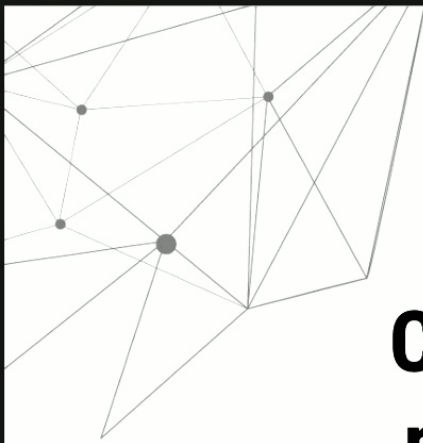

Indistinguishable under  
access to the **Observe&Do**  
**Probing Scheme**

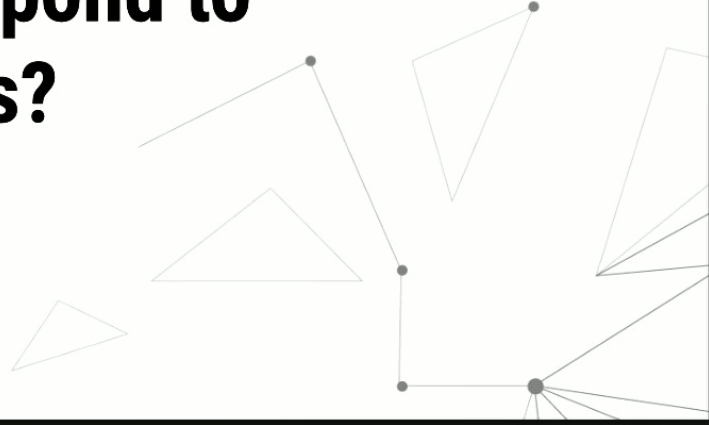

Correspond to  
the same mDAG

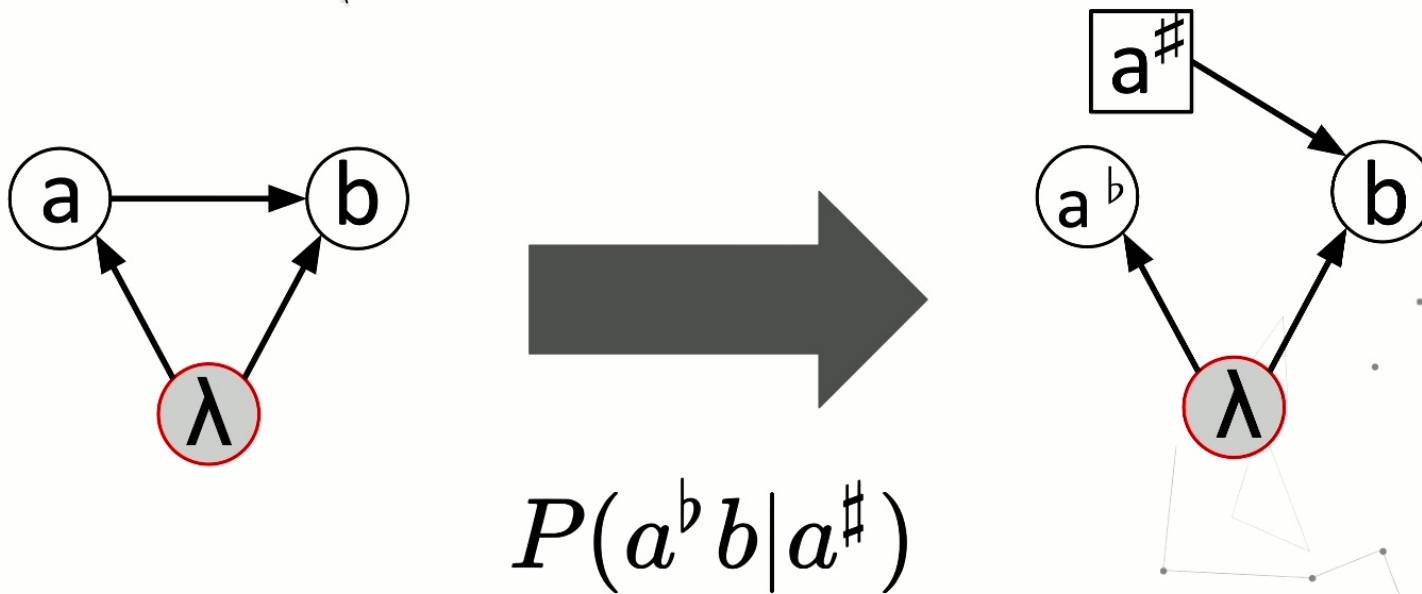

Can we ***weaken*** our **interventional** probing scheme, but still be able to distinguish between causal structures that correspond to different mDAGs?

# Observe&Do Probing Scheme

First observe the natural value of the variable ( $a^b$ ), and then perform an intervention that forces it to take another value ( $a^\#$ ).

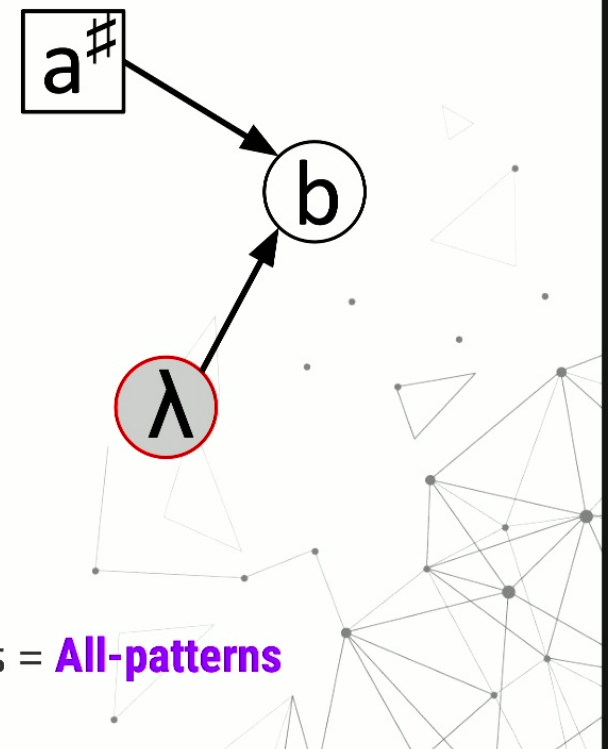

Do this for every visible variable = **Observe&Do Probing Scheme**

# All-patterns Observe-or-Do Probing Scheme

Observe the natural value of a variable or perform a do-intervention on it, but not both.

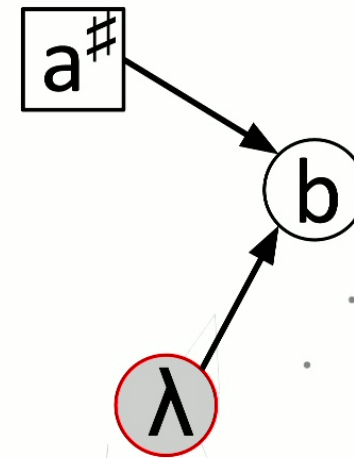

$$P(b|a^\#)$$

Intervene on every subset of visible variables = **All-patterns Observe-or-Do Probing Scheme**

# All-patterns Observe-or-1Do Probing Scheme

Restricted to do-interventions that set the variable to *one* of its possible values.

$$P(b|a^\# = 0)$$

Intervene to one value on every subset of visible variables = **All-patterns Observe-or-1Do Probing Scheme**

Characterized  
by mDAGs

**Observe&Do  
Probing Scheme**

**All-patterns Observe-or-Do  
Probing Scheme**

**All-patterns Observe-or-1Do  
Probing Scheme**

**Passive Observations**
